The Protestant Churches made no serious attempt to evangelise India till the beginning of the nineteenth century. They have thus been at work in the Indian mission field for something over 100 years, and the statistical results of their efforts are given above. It is now, however, generally recognised that Christian missions are producing indirect effects in India which lend themselves only incompletely to any sort of tabulation. The main agency of this more diffusive influence of Christianity is the missionary school and college. The **Protestant missions** fill a considerable part in the elementary education of the country. According to the *Year Book of Missions in India*, 1912, they are teaching 446,000 children in 13,204 elementary schools, mostly situated in villages. This represents one-ninth of the total of elementary schools and scholars throughout the Empire. The majority of children in these schools are non-Christians. The same is true also of the high schools and in a still greater degree of the colleges. The former number 283 with 62,600 male and 8,400 female pupils. There are 38 colleges affiliated to Universities, containing 5,488 male and 61 female students. Of these as many as 5,241 are non-Christians. From the standpoint of missionary policy much importance is attached to these agencies for the indirect propagation of the Christian faith. The statesman and the publicist are chiefly interested in the excellent moral effect produced by these institutions amongst the educated classes, and the higher educational ideals maintained by their staffs. The principal **University colleges** under Protestant auspices are the Madras Christian College; the Duff

College, Calcutta; the Wilson College, Bombay; and the Foreman College, Lahore. All these are maintained by Presbyterian societies, either British or American. The Roman Catholics have a large number of educational institutions, ranging from small village schools to great colleges preparing students for University degrees. But the proportion of Christian students in their institutions is very much larger than in those of the Protestant bodies. The proportion of literates amongst native Roman Catholics is probably lower than amongst the Protestant converts; but compared with Hindus and Mahomedans it is conspicuously higher. The Roman Catholics have some 3,000 elementary schools in which 98,000 boys and 41,000 girls are receiving instruction. In middle and high schools they have 143,000 boys and 73,000 girls and in University colleges about 5,000 students of both sexes. These figures, however include a large proportion of Europeans and Eurasians, who are an almost negligible quantity in Protestant mission schools and colleges.

More recent, but producing even more widespread results, is the **Philanthropic work** of Christian missions. Before the great famine of 1878, missionaries confined themselves almost exclusively to evangelistic and educational activity. The famine threw crowds of destitute people and orphan children upon their hands. Orphanages and industrial schools became an urgent necessity. But the philanthropic spirit is never satisfied with one kind of organisation or method. A great stimulus was also given to medical missions. **Hospitals and dispensaries** have sprung up in all parts of the mission field; and leper asylums are almost a monopoly of Christian missionary effort. In 1911 the total number of medical missionaries working under Protestant societies in India was 118 men and 217 women, the majority of the former being also ordained ministers of religion. There are 184 industrial institutions in which 59 different arts and crafts are taught, ranging from agriculture to type-writing. In this department the **Salvation Army** hold a prominent place; and the confidence of Government in their methods has been shown by their being officially entrusted with the difficult work of winning over certain criminal tribes to a life of industry. The indirect effect of all this philanthropic activity under missionary auspices has been most marked. It has awakened the social conscience of the non-Christian public, and such movements as "The Servants of India" and the mission to the Depressed Classes are merely the outward and visible sign of a great stirring of the philanthropic spirit far beyond the sphere of Christian missionary operations.

Reunion.—For very many years Indian Christians have shown that they felt much more acutely than Europeans the scandal and disadvantage of the divisions of Christendom. These divisions are due to a very much greater extent than is always recognised to political causes, and in the political conflicts of the sixteenth and seventeenth centuries, when they became crystallised, India had no part. Even those differences amongst Chris-

fians which have a purely religious origin and foundation seem to be of very little account to Indian converts. For them the great dividing line is that between Christ and Mahomed or Shiva and Vishnu. Standing before a background of paganism they are conscious of a real fundamental unity in Christ. Compared with the greatness of the gulf which separates Christian from non-Christian, the differences of "confession" and "order" which separate Christian from Christian seem to be wholly artificial and negligible. In consequence the reunion movement, which is noticeable all over the world, is nowhere so strong as in India. In South India it has already resulted in the formation of the South India United Church, which is a group union of five of the principal Protestant communions, and as these bodies are in communion individually with all, or almost all, the other Protestant bodies at work in India the Union may be regarded as a Pan-Protestant Union. The S.I.U.C. is at present negotiating with the Anglican Church. If as seems probable the negotiations are successful the result will amount to a union of all the Christian bodies in South India, except the Roman Catholics, on the basis of the last Lambeth encyclical. This will mean that a real National Indian Church will come into being. Although it will be tolerant of almost every expression of Evangelical opinion and will retain the freedom of development characteristic of Protestantism, by its acceptance of the Catholic creeds and the Historic Episcopate, it will be linked up with the Catholic tradition of the Anglican Church.

Anglican Missionary Societies.

The Church Missionary Society carries on work in India in seven different missions—the United Provinces, South India, Travancore and Cochin, Bengal, Western India, Punjab and Sind and the Central Provinces and Rajputana. The names are in order of seniority. Work was begun in what are now called the United Provinces in 1813, in Bombay in 1820, in the Punjab in 1851, and in the Central Provinces in 1854. The Society has always kept Evangelistic work well to the fore; but it also has important medical missions, especially on the N.-W. Frontier, and many schools of the Primary, Middle and High standards. The Church of England Zenana Missionary Society is an offshoot of the C. M. S. controlling the work of 162 missionary ladies. The number of ordained European missionaries of the C. M. S. in India and Ceylon is 160, European laymen 30 and European lay-

women 258. The Society claims a Christian community of 2,21,359 of whom 63,055 are adult communicants.

Society for the propagation of the Gospel.—Statistics of the work of this Society are not easily ascertained, as much of it is done through Diocesan institutions, which, while financed and in many cases manned by the S. P. G., are entirely controlled by the Diocesan authorities. The best known of the S. P. G. missions is that at Delhi, commonly called the Cambridge Mission to Delhi, carrying on educational work at St. Stephen's College and School. At the College there are about 200 students under instruction, and at the High School 800. The College hostels accommodate 100 students. Missions to the depressed classes exist in Burma, in the Ahmednagar District and in several parts of South India, especially in the Diocese of Tinnevely-Madurai. There are 1,16,000 Indian Christians under the regis of the S. P. G.; 90 ordained European missionaries and 98 European lady workers.

Other Anglican Societies.—The Oxford Mission to Calcutta was started in 1830. It works in the poorest parts of Calcutta and also at Barisal. There are 11 mission-priests of this Society, and 16 Sisters. In addition to its work amongst the poor, the Oxford Mission addresses itself to the educated classes in Bengal and issues a periodical called *Epiphany*, which is known all over India.

The Society of St. John the Evangelist (commonly known as the Cowley Fathers) has house at Bombay and Poona, and small stations in the Bombay Konkan. In Bombay its missionary work centres round the Church of Holy Cross, Umarnahdi, where there is a school and a dispensary. The Christians are chiefly drawn from the very poorest classes of the Bombay population. At Poona the Society co-operates with the Wantage Sisters and in Bombay with the All-Saints' Sisters. Other Anglican sisterhoods represented in India are the Clewer Sisters at Calcutta and the Sisters of the Church (Kilburn) at Madras. The St. Hilda's Deaconesses' Association of Lahore carries on important educational work (chiefly amongst the domiciled community) in the Punjab. The mission of the Scottish Episcopal Church at Nagpur, the Dublin University Mission at Hazaribagh, and the Mission of the Church of England in Canada working at Kangra and Palampur (Punjab) should also be mentioned under the head of Anglican Missions.

Bengal Ecclesiastical Department.

Westcott, The Right Reverend Foss, D.D. ..

Lord Bishop of Calcutta and Metropolitan of India.

SENIOR CHAPLAINS.

Stokoe, Rev. Cecil George, M.A. (On leave.)
Firminger, Ven'ble Walter Kelly, M.A., B.D. (On leave.)
Drawbridge, Rev. W. H., M.A. (On leave.)
Parker, Rev. William Almar Hedley Chaplain, St. Thomas' Church, Calcutta.
Crosier, Rev. Philip Horsefall (On leave.)
Penley, Rev. Horace Octavius, M.A. Chaplain, St. James's, Calcutta.
Riddale, Rev. Arthur Cyril Services placed at the disposal of the Government of Bihar and Orissa.
Godber, Rev. John St. Paul's Cathedral, Calcutta.

And 12 Junior Chaplains.

CHAPLAINS OF THE CHURCH OF SCOTLAND.

Gordon, Rev. James Drummond, M.A., B. Sc.	(On leave.)
Macfarlane, Rev. Andrew, D.S.O., B.D.	Presidency Senior Chaplain, Bengal, and Senior Chaplain, St. Andrew's Church, Calcutta.
Ingram, Rev. James William, B.D.	Senior Chaplain, St. Andrew's Church, Calcutta.
McLean, Rev. Lachlan, M.A., B.D.	Under Army Department.

CHAPLAINS OF THE CHURCH OF ROME.

Meuleman, The Most Reverend Dr. Brice, S.J.	Archbishop, Calcutta.
Carbery, Rev. Fr. Philip, S.J.	Chaplain, Alipore Central Jail.

Bombay Ecclesiastical Department.

Palmer, Right Reverend Edwin James, M.A.	Lord Bishop of Bombay (On furlough).
Hatchell, Ven'ble C. F. W.	Archdeacon of Bombay.
Smith, A. K.	Registrar of the Diocese.

SENIOR CHAPLAINS.

D'Alessio, Rev. Edward Samuel John, P.A...	Ghorpuri.
Kennelly, Rev. W. J. M.	(On leave.)
Tibbs, Rev. Philip Gordon, B.A.	Kirkee.
Arnould, Rev. Henry Lloyd M.H.	St. Mary's, Poona.
Hill, Rev. Edward Eustace

And 16 Junior Chaplains.

CHAPLAINS OF THE CHURCH OF SCOTLAND.

Macfarlane, Rev. A.	(On deputation)
Nelson, Rev. A. M.	(On leave.)
Jameson, Rev. R. G.	Presidency Senior Chaplain and Chaplain, St. Andrew's Church, Bombay.
Lee, Rev. R. E., M.A., B.D.	(On combined leave.)
Rennie, Rev. J. Y.	St. Andrew's Church, Karachi.
Bell, Rev. G.	Chaplain, Poona and Kirkee.
McLellan, Rev. D. T. H.	Chaplain, St. Andrew's Church, Bombay.

CHAPLAINS OF THE CHURCH OF ROME.

Goodier, The Most Rev. A.	Presidency.
---------------------------	----	----	----	-------------

Madras Ecclesiastical Department.

Waller, Right Reverend Edward Harry Mansfield, D.D.	Lord Bishop of Madras.
Nuttall, Venerable Frank, M.A.	Archdeacon and Senior Joint Chaplain, St. George's Cathedral.
Rowlandson, Frederic, F.A., LL.B.	Registrar of the Diocese and Secretary to the Lord Bishop.

SENIOR CHAPLAINS.

Flynn, Rev. Hugh Hamilton	Coonor.
Heycock, Rev. Francis Wheaton, M.A.	(On leave.)
Morton, Rev. Bertram Mitford	On combined leave.
Stone, Rev. Henry Cecil Brough	St. Thomas' Mount with Pallavaram.
Jervis, Rev. E. O.	Holy Trinity Church, Bangalore.
Bridge, Rev. Henry Noel	Ootacamund.
Proctor, Rev. Francis Owen	Vizagapatam.
Wright, Rev. G. A. Arthur	Mercara and Mysore.
Sell, Rev. Charles Edward	Fort St. George.
Smith, Rev. George C. Augustus	Trimulgherry, Deccan.
Brownrigg, Rev. Ernest Graham, M.A.	St. Mark's Church, Bangalore.
Borlase, Rev. J. J. D., B.A., LL.B.	(On combined leave.)
Loasty, Rev. Harry Clement, M.A.	(On combined leave.)
Hacking, Rev. Henry, M.A.	Vellore.
Careless, Rev. William Edward, M.A.	Bellary.
Beeley, Rev. Ben Darcey	Wellington.
Bull, Rev. Francis Faulkner	Trichinopoly.

And 11 Junior Chaplains.

CHURCH OF SCOTLAND.

Mackenzie, Rev. Donald Francis, M.A.	St. Andrew's Church, Madras.
McNeill, Rev. J. H. H.	(On combined leave).
Mitchell, Rev. James Donald, M.A., B.D.	St. Andrew's Church, Bangalore.
Pitcairn Hill, Rev. Colin Cecil, M.A.	Probationary, St. Andrew's Church, Secunderabad.
Wright, Rev. J. Johnstone	St. Andrew's Church, Madras and Acting Presidency Senior Chaplain.

Assam Ecclesiastical Department.

Thomson, Rev. T. A.	Shillong.
Pakenham-Walsh, The Right Rev.	Officiating, Darrang.
Wylde, Rev. F. St. J. Quinton	Lakhimpur.
Wood, Rev. W. S. A.	Stichar.
Dixey, Rev. A. D.	Sibsagar.

Bihar and Orissa Ecclesiastical Department.

JUNIOR CHAPLAINS.

Ridsdale, Rev. A. C.	Chaplain, Cuttack.
Williams, Rev. H. F. F.	Bankipore.
Dyer, Rev. B. S., M.A.	Dinapore.
Perfect, Rev. Henry	Bhagalpur.
Reginald, Rev. A. J. C...	Monghyr and Jamalpur.
Vacant	Muzaffarpur and Darbhanga.
Minto-Senhouse, Rev. Bernard Darley	Ranchi.

- Burma Ecclesiastical Department.

Fyfe, The Right Reverend Rolleston Sterritt, M.A., Lord Bishop of Rangoon.

SENIOR CHAPLAINS.

Price, Rev. Howel Evans	Archdeacon of Rangoon and Bishop's Commissary. (On leave.)
Cowper-Johnson, Rev. Wilfrid Harry, M.A.	Chaplain, Maymyo, Offg. Archdeacon of Rangoon and Bishop's Commissary.

And 7 Junior Chaplains.

Central Provinces Ecclesiastical Department.

Chatterton, Right Reverend E., D.D.	Lord Bishop of Nagpur.
Martin, Ven'ble P. W.	Archdeacon and Chaplain, Nagpur.

SENIOR CHAPLAINS.

Clarke, Rev. W. L.	(On leave.)
Molony, Rev. P. J.	Second Chaplain, Mhow.
Clough, Rev. E. R.	Garrison Chaplain, Jubbulpore.
Wardell, Rev. A. F. G.	(On leave.)
Carter, Rev. B. B., M.A.	Neemuch.

And 9 Junior Chaplains.

North-West Frontier Ecclesiastical Department.

SENIOR CHAPLAINS.

Henry, Rev. W. E. C., M.A.	Abbottabad.
Devenish, Rev. C. R. S.	(On leave.)
Dixon, Rev. T. H., M.A.	(On leave.)
Carden, Rev. H. C.	Peshawar.

And 3 Junior Chaplains.

Punjab Ecclesiastical Department.

Durrant, Right Reverend H. B., M.A., D.D. .. Lord Bishop of Punjab, Lahore.
Wheeler, The Ven'ble Claffon High Trevor, M.A. .. Archdeacon, Karachi.

SENIOR CHAPLAINS.

Cole, Rev. Alexander Barnet Farquharson, M.A. .. (On leave.)
Markby, Rev. Frederick Edward, M.A. .. (On leave.)
Fagan, Rev. High William Farquharson, B.A. .. (On leave.)
Buckwell, Rev. Frederick Charles .. Simla.
Castle, Rev. Willie Wichello, B.A. .. Hyderabad (Sind.)
Stephenson, Rev. Canon Henry Stanley, M.A. .. Bishop's Chaplain, Lahore.
Rintoul, Rev. Charles Randolph, M.A. .. (On leave.)
Selwyn, Rev. Arthur Lewis Henry, B.A. .. (On leave.)
Campbell, Rev. Rowland William, B.A. .. Murree.
Mainsell, Rev. Arthur Percie Gabbett, B.D. .. (On leave.)
Williams, Rev. James Ernest Harris, M.A. .. Jullunder.
Preby, Rev. Randolph Simon Bennetts, B.A. .. Rawalpindi.
H-n-v, Rev. William Ernest Charles, M.A. .. Abbottabad.
Dixon, Rev. Thos. Harold, M.A. .. Raisinga.
Barne, Rev. George Dunsford, M.A. .. On Foreign Service.

And 18 Junior Chaplains.

United Provinces Ecclesiastical Department.

Westcott, The Right Reverend George Herbert .. Lord Bishop of Lucknow.
Irwin, The Ven'ble B.C.B., M.A. .. Archdeacon of Lucknow.
James, J. W. Langford .. Registrar of the Diocese of Lucknow.

SENIOR CHAPLAINS.

Smith, Rev. H. T. P. Benares.
Bell, Rev. William Lachlan, M.A. Waziristan Field Force.
Irwin, Rev. Benjamin Christopher Bulteel, M.A. .. (On leave.)
Padfield, Rev. George Augustus Selwyn Chakrata.
Meyler, Rev. Edward Mowbray, B.A. Allahabad.

And 13 Junior Chaplains with 8 Additional Clergy.

CHURCH OF SCOTLAND;

McCauley, Rev. M. W., B. D. Allahabad, Army Department.

THE ROMAN CATHOLIC CHURCH.

With regard to numbers, the *Catholic Directory of India*, 1913, gives the following discrepant tables:—

		Civil Census, 1911.	Ecclesiastical Estimate.
British India	{ Latin rite	1,430,582	1,535,820
	{ Syriac rite	413,142	364,660
<i>Total, British India and Prot. States</i>		1,843,724	1,900,480
Burma	60,282	88,447
Ceylon	339,300	322,163
<i>Total, India, Burma and Ceylon</i>		2,243,306	2,311,090
French India	25,918
Portuguese India	296,148
Ecclesiastical Grand Total	2,663,156*

* After trying to rectify discrepancies the *Directory* fixes as probable the following numbers:—

European and Anglo-Indian Catholics 114,512
Baptised Indian Catholics 2,423,286

Total 2,537,798

There has been a notable increase during the last 10 years, but the figures have not been completely worked out. The number of Catholics for India and Ceylon has risen to over 3,000,000, and the priests amount to 3,145.

The Catholic community as thus existing is composed of the following elements:—

- (1) The "Syrian" Christians of the Malabar Coast, traditionally said to have been converted by the Apostle St. Thomas. They were brought under allegiance to the Pope by the Portuguese in 1599, and placed first under Jesuit bishops and then under Carmelite Vicars Apostolic. They are at present ruled by four Vicars Apostolic of their own Syriac rite.
 - (2) Converts of the Portuguese missionaries from 1500 and onwards, starting from Goa and working in the south of the peninsula and up the west coast, Ceylon, Bengal, etc.
 - (8) European immigrants at all times, including British troops.
 - (4) Modern converts from Hinduism and Animism in recent mission centres.
- The Portuguese mission enterprise starting after 1500, continued for about 200 years, after which it began to decline. To meet this decline fresh missionaries were sent out by the Congregation *de propaganda fide*, till by the middle of the 19th century the whole country was divided out among them except such portions as were occupied by the Goa clergy. Hence arose a conflict of jurisdiction in many parts between the Portuguese clergy of the "padroado" or royal patronage, and the propaganda clergy. This conflict was set at rest by the Concordat of 1886. At the same time the whole country was placed under a regular hierarchy, which after subsequent adjustments now stands as follows:—

Of the Portuguese Jurisdiction:—

The archbishopric of Goa (having some extension into British territory) with suffragan bishoprics at Cochin, Mylapore and Damaun (all three covering British territory).

Of the Propaganda Jurisdiction:—

The archbishopric of Agra with suffragan bishoprics of Allahabad and Ajmere.

The archbishopric of Bombay, with suffragan bishoprics of Poona, Mangalore and Trichinopoly.

The archbishopric of Calcutta, with suffragan bishoprics of Dacca, Krishnagar and Patna, and the Prefecture Apostolic of Assam.

The archbishopric of Madras, with suffragan bishoprics of Hyderabad, Vizagapatam and Nagpur.

The archbishopric of Pondicherry (French) with suffragan bishoprics of Mysore, Coimbatore and Kumbakonam.

The archbishopric of Simla with suffragan bishopric of Lahore and the Prefecture Apostolic of Kashmir.

The archbishopric of Colombo (Ceylon) with suffragan bishoprics at Kandy, Galle, Jaffna and Trincomalee.

The archbishopric of Verapoly, with suffragan bishopric of Quilon.

Four Vicariates Apostolic of the Syriac rite for the Syrian Christians of Malabar.

Three Vicariates Apostolic of Burma.

During 1923 two new dioceses have been constituted: Tuticorin and Calicut.

The European clergy engaged in India almost all belong to religious orders, congregations or mission seminaries, and with a few exceptions are either French, Belgian, Dutch, Swiss, Spanish or Italian by nationality. They number about 1,000 besides which there is a body of secular clergy mostly native to the country, numbering about 2,000 and probably about 2,000 nuns. The first work of the clergy is parochial ministration to existing Christians, including railway people and British troops. Second comes education, which is not confined to their own people; their schools being frequented by large numbers of Hindus, Mahomedans, Parsis, etc. Among the most important institutions are St. Xavier's College, Calcutta, St. Peter's College, Agra, St. Xavier's College, Bombay, St. Joseph's College, Trichinopoly, St. Aloysius College, Mangalore, teaching university courses; besides a large number of high schools and elementary schools. The education of girls is supplied for by numerous convent schools worked by religious congregations of nuns to say nothing of orphanages and other charitable institutions. The total number under education amounted in 1904 to 148,051 boys and 73,164 girls, later figures being unavailable. As to missionary work proper, the country is covered with numerous mission centres, among which those in Chota Nagpur, Gujerat, Orissa, the Nizam's Dominions, the Ahmednagar district and the Telugu coasts may be mentioned. (Full particulars on all points will be found in the Catholic Directory already quoted.) The mission work is limited solely by shortage of men and money, which if forthcoming would give the means to an indefinite extension. The resources of the clergy after the ordinary church collections and pay of a few military and railway chaplaincies are derived mainly from Europe, that is, from the collections of the *Society for the Propagation of the Faith* and of the *Holy Childhood*; helped out by private or other donations secured from home by the different local missionaries. In mission work the fathers count as enrolled only those who are baptised and persevering as Christians, and no baptism, except for infants or at point of death; is administered except after careful instruction and probation. This, while keeping down the record, has the advantage of guaranteeing solid results.

The Holy See is represented by a Delegate Apostolic of the East Indies who resides at Bangalore.

THE SCOTTISH CHURCHES.

The Church of Scotland.—The Chaplaincy work of the Church of Scotland dates from 1814, when the Rev. Dr. Bryce landed in Calcutta, and organised a congregation of his Scottish fellow countrymen. The

centenary of the churches in the three Presidency towns was celebrated: Calcutta, 1914; Bombay, 1919; Madras, 1921. Since 1903 there have been eighteen chaplains on the staff, of whom nine belong to the Bengal

Presidency, five to Bombay, and four to Madras. These minister both to the Scottish troops and to the civil population of the towns where they are stationed, but when there is a Scottish regiment the chaplain is attached to the regiment, instead of being posted to the station where the regiment happens to be placed and as a rule moves with the regiment. There are three Presidency senior Chaplains in charge of Bengal, Bombay, and Madras respectively. There are churches in the chief towns of the Presidencies, and churches have also been built, in all considerable military stations, *e.g.*, Chakrata, Lucknow, Peshawar, Ranikhet, Rawalpindi, Sialkot, Umballa and Jubulpore. In addition to the regular establishment there are a number of acting Chaplains sent out by the Colonial Committee of the Church of Scotland, and these are serving in such stations as Rawalpindi, Lahore, Cawnpore, Meerut, Mhow and Quetta. The Additional Clergy Societies in India contribute towards the cost of this additional establishment. In other places such as Sialkot, Murree, Dalhousie, and Darjeeling, regular services are provided by Scottish Missionaries. Simla has a minister of its own sent out from Scotland.

The Mission work of the Church of Scotland dates from 1829, when Alexander Duff, one of the greatest of modern missionaries, was sent to Calcutta. He was the first to open schools where English was made the medium for instruction, and where religious teaching was given daily. Similar educational missions were soon afterwards started in Bombay and Madras. Educational work is still an important branch of the mission work of the Church, but the Bombay College was closed in 1891, and in 1907 the College in Calcutta was united with the College of the United Free Church of Scotland, to form the Scottish Churches College. In the Punjab Evangelistic work is being carried on from eight centres under seventeen missionaries. The baptised Christian community now numbers over 14,000. Work commenced in Darjeeling in 1870 is now carried on throughout the whole Eastern Himalayan district, and there is a Christian community there of over 8,000. In the five mission districts of Calcutta, the Eastern Himalayas, Madras, Poona, and the Punjab there were at the end of 1919 over 24,787 baptised Indian Christians. In connection with these missions the Women's Association of Foreign Missions does invaluable service in school, medical and zenana work, having in India 41 European missionaries, 163 teachers, over 60 schools, three hospitals and six dispensaries.

The Church of Scotland has also done much to provide education for European children in India. Together with the United Free Church St. Andrew's Church provides the governing body of the Bombay Scottish High Schools, which have always held a high place among such institutions, and exercises pastoral supervision over the Bombay Scottish Orphanage. In Bangalore there is the St. Andrew's High School, and both in Bangalore and in Madras the local congregation supports a school for poor children. The Ayrcliffe

Girls' Boarding and High School is under the care of the Kirk-Session of St. Andrew's Church, Simla. The now well-known St. Andrew's Colonial Homes at Kalimpong, Bengal, though not directly part of the work of the Church of Scotland, were initiated by and are being locally managed by missionaries of that Church. The homes exist for the benefit of the domiciled European Community, and are doing magnificent work. There are now twenty cottages, and about 600 children in residence. Further information may be found in "Reports of the Schemes of the Church of Scotland," Blackwood & Sons; "The Church of Scotland Year Book" and "The Handbook of the Church of Scotland in India and Ceylon" a new edition of which is being prepared.

The United Free Church of Scotland.—This branch of the Scottish Church has only three purely European congregations in India, two in Calcutta, Wellesley Square, and Howrah and one in Bombay, Waudby Road. In Calcutta the Howrah Church is in the district of the mills, and every effort is made to minister to the Scottish Engineers and other workers in the mills. As noted above members of these congregations co-operate with the Established Church of Scotland in providing education for European children.

The Church carries on Mission work in seven different areas. They are Bengal (Calcutta, Kalna and Chinsura); the Santal Parganas, with five stations; Western India (Bombay, Poona and Alibag); Hyderabad State (Jalna, Bethel and Parbhani); Madras (Madras City, Chingleput, Sripurumbudur and Conjeeveram); the Central Provinces (Nagpur, Bhandara, Wardha, and Amraoti); Rajputana, where the extensive work instituted by the United Presbyterian Church in 1860 is now carried on from eleven centres.

The work falls into three main divisions, evangelistic, medical, and educational. The Christian community has been organised in all the chief centres into congregations which form part of the Indian Presbyterian Church, and this Church is seeking to take an increasing share in the work of evangelism. There are nineteen Mission Hospitals, among which are four excellently equipped and staffed Women's Hospitals, in Madras, Nagpur, Ajmer, and Jaipur. From the days of Duff in Calcutta and Wilson in Bombay the Mission has given a prominent place to education. It has many schools in all parts of its field and it has also made a large contribution to the work of higher education through four Christian Colleges. The Scottish Churches College, Calcutta, is under the joint management of the Church of Scotland and the United Free Church. The Madras Christian College, which owes so much to the work of Dr. William Miller, is now under the direction of a Board representing several Missionary Societies. Wilson College, Bombay, with which the names of Wilson and Dr. MacKichan are specially associated and Hislop College, are under the direct management of the Free Church.

BAPTIST SOCIETIES.

THE BAPTIST MISSIONARY SOCIETY OF GREAT BRITAIN.—Formed in 1792, largely through the efforts of Dr. Wm. Carey, operates mainly in Bengal, Bihar, the United Provinces, the Punjab, and Ceylon. The Baptist Zenana Mission has recently been united with this Society. The staff of the united Mission in India numbers 256 missionaries and about 968 Indian workers. Connected with the Society are 232 Indian Churches, 268 Primary Day Schools, 24 Middle and High Schools, and 3 Theological Training Colleges. The church membership at the close of 1922 stood at 16,866 and the Christian Community at 49,851. In the methods of the Society, a prominent place is given to Bazaar and Village preaching. Increase in membership during the past ten years, about 60 per cent. and in the community 50 per cent. for the same period. Amongst the non-caste people great progress has been made in recent years, and many of the Churches formed from amongst these peoples are self-supporting.

Special work amongst students is carried on in Calcutta, Dacca, Cuttack and Delhi, where hostels have been erected for the prosecution of this form of work.

EDUCATIONAL WORK.—Ranges from Primary School to Colleges. Serampore College, the only College in India able to bestow a theological degree granted under Royal Charter by His Danish Majesty in 1827, and confirmed by the British Government in the Treaty of purchase of the Settlement of Serampore in 1845, and placed in 1856 by the College Council at the disposal of the Baptist Missionary Society to become a part of its Missionary Educational operations, Arts and Theological. It was affiliated in 1857 to the newly-formed Calcutta University; reorganised in 1910 on the lines of its original foundation with the appointment of a qualified Theological Staff on an Inter-denominational basis for the granting of Theological Degrees to qualified students of all Churches.

As the only College in India granting a Theological Degree a large number of students are now resident in the splendid College Buildings. In Arts, the College prepares for the Calcutta Arts Examinations. *Principal:* Rev. G. Howells, M.A., B.D., B.LITT., PH.D.

A Vernacular Theological Institute likewise attaches to Serampore. There is an Institute also at Cuttack, for the training of Indian preachers and Bible schools in several centres.

There are 9 or 10 purely English Baptist Churches connected with the Society, but English services are carried on in many of the stations where an European population obtains. Medical work connected with the Society reported 5 Hospitals, 8 Dispensaries, and about 64,800 out-patients for the year 1922. Two large Printing Presses for both English and Vernacular work are conducted at Calcutta and Cuttack. The Secretaries of the Mission are the Rev. John Held and W. Craig Eadie, Esq., 43, Ripon Street, Calcutta.

The Headquarters of the Mission are at 19, Fumival Street, Holborn, London. The total income for 1920 of the Society amounted to £267,338.

THE CANADIAN BAPTIST MISSION.—Was commenced in 1873, and is located in the Telugu Country to the north of Madras, in the Kistna, Godavari, Vizagapatam and Ganjam Districts. There are 22 stations and 313 out-stations with a staff of 96 missionaries, including 6 qualified physicians, and 989 Indian workers, with Gospel preaching in 1,400 villages. Organised Churches number 79, communicants 15,100 and adherents 20,409 for the past year. Nine Churches are entirely self-supporting. In the Educational department are 390 village day schools, with 13,145 children, 13 boarding schools, 2 High schools, a Normal Training school, a Theological Seminary providing in all for 1,000 pupils, and an Industrial school. There are 6 Hospitals and two leper asylums. The Mission publishes a Telugu newspaper. Village Evangelisation is the central feature of the Mission, and stress is laid upon the work amongst women and children. During the last decade membership has increased by 52 per cent., the Christian community by 50 per cent., and scholars by 500 per cent. The Indian Secretary is the Rev. Gordon P. Barsa, Tekkali, Ganjam District.

THE AMERICAN BAPTIST TELUGU MISSION.—Was commenced in the year 1836, and covers large parts of Nellore, Guntur, Kistna, and Kurnool Districts, parts of the Decan and an important work in Madras and the surrounding vicinity. Its main work is evangelism, but there are also Educational and Medical Institutions of importance. Industrial Settlement work for the Erukalas is carried on at Kavali and vicinity. Industrial departments are maintained also in connection with the Mission High School at Nellore, and the Mission High School at Kurnool. Organized Telugu Churches number 184, with 75,841 baptized communicants. There are 95 missionaries, and 1,836 Indian workers. The mission maintains in co-operation with the Canadian Baptist Mission a Union Theological Seminary at Ramapatnam for the training of Indian preachers. A bible Training School for the training of Telugu women is located in Nellore. A total of 27,794 receive instruction in 879 primary schools, 13 secondary schools and 4 High schools. In Medical work 7 Hospitals and 7 Dispensaries reported 2,881 in-patients, 55,077 out-patients, and 122,482 treatments during the year.

Secretary: Rev. S. W. Stenger, Nandyal.

AMERICAN BAPTIST FOREIGN MISSION SOCIETY, organized in 1814, has Missions in Burma begun 1814; Assam 1836; Bengal and Orissa 1836; South India 1840. It owes its rise to the celebrated Adoniram Judson. Until 1910 the Society was known as the American Baptist Missionary Union. There are 33 main stations in Burma, 12 in Assam, 10 in Bengal and Orissa, 25 in South India, besides hundreds of out-stations. All forms of missionary enterprise come within the scope of the Society.

The missionary staff numbers 450 in all, with an Indian workers' staff of 5,713. Communicants number 176,620. Organized churches number 1,500 of which 880 are self-supporting. Educational work is conducted on a large scale, the total number of schools of all grades being 2,147 with over 60,121 pupils. The Christian College has 125 students in col-

lege classes. There are twenty High Schools with 4,423 pupils.

Medical work embraces 15 Hospitals and 32 Dispensaries, in which 75,739 out-patients and 4,582, in-patients were treated last year.

Indian Christians contribute annually more than Rs. 5,47,861 for religious and benevolent work within the Mission.

The great work of the Mission continues to be evangelistic and the training of the native preachers and Bible-women, and extends to many races and languages, the most important of which, in Burma, has been the practical transformation of the Karens, whose language has been reduced to writing by the Mission. The work in Assam embraces 9 different languages, and large efforts are made amongst the employers on the tea plantations. There are 12 Theological Seminaries and training schools with 765 pupils. The Mission Press at Rangoon is the largest and finest in Burma.

Assam Secretary, Rev. A. J. Tuttle, Gauhati, Assam.

Burma Secretary, Rev. Walter E. Wlatt, 15, Mission Road, Rangoon, Burma.

Bengal and Orissa Secretary, Rev. Harold I. Frost, Balasore, Orissa.

South India (or Telugu) Secretary, Rev. W. J. Longley, Ramajatham, S. India.

THE TASMANIAN BAPTIST MISSION.—With 2 missionaries, established at Serajunge, E. Bengal.

Secretary: Rev. T. C. Kelly, Mission House, Serajunge.

THE AUSTRALIAN BAPTIST FOREIGN MISSION.—Embracing the societies representing the Baptist Churches of the States of the Australian Commonwealth. The field of operations is in East Bengal. The staff numbers 35 Australian workers. There are 1,927 communicants and a Christian community of 4,143.

Secretary, Field, Council: Rev. H. J. Sutton, M. A., Mymensingh.

THE STRICT BAPTIST MISSION.—Has 11 European Missionaries, and 102 Indian Workers in Madras, and Salem District. Communicants number 225; organised Churches 5; elementary schools 32, with 1,500 pupils.

Secretary: Rev. E. A. Booth, KHPauk, Madras, W.

AMERICAN BAPTIST, BENGAL-ORISSA MISSION commenced in 1836. Area of operation: Midnapore district of Lower Bengal and Balasore district of Orissa. Mission staff 32, Indian workers 321. One English Church and 21 Vernacular Churches, Christian Community 5,000; One hospital and two dispensaries. Educational: One Theological and one High School, and 129 Elementary schools, pupils 3,883. One Industrial school for weaving and carpentering, &c. The Vernacular Press of this mission printed the first literature in the Santali language.

Secretary: Rev. Harold I. Frost, Balasore, Orissa.

PRESBYTERIAN SOCIETIES.

THE IRISH PRESBYTERIAN CHURCH MISSION.—Operates in Gujarat and Kathiawar with a staff of 37 Missionaries of whom 4 are qualified doctors and an Indian staff of 340 including school teachers. There are 11 Organised Churches, a communicant roll of 1,691, and a Christian community of 8,759. In Medical work there are 3 Hospitals, 5 Dispensaries, with 792 in-patients and 12,413 out-patients. The Mission conducts 2 High schools, 1 Anglo-Vernacular school, and 123 vernacular schools affording tuition for 5,973 pupils, 4 Orphanages, a Divinity College at Ahmedabad, a Teachers' Training College for men, a Teachers' Training College for women, both at Ahmedabad, and a Mission Press at Surat. The Mission has made a speciality of farm colonies, of which there are about a score in connection with it, most of them thriving.

The Jungle Tribes Mission with 7 missionaries is a branch of the activities of the above, working in the Panch Mahals and Rewa Kantha districts, with farm colonies attached.

Secretary: Rev. Hamilton Martin, B.A., Mission House, Ahmedabad.

THE UNITED PRESBYTERIAN CHURCH OF NORTH AMERICA.—The Sialkot Mission of the above Church was opened at Sialkot, Punjab, in 1855. It is now carrying on work in ten districts of the province and one in the N. W. F. Provinces. Its missionaries number 126, and its Indian workers 734. Its educational work comprises one Theological Seminary, one College, five High Schools, one Industrial School, eight Middle Schools, and

208 Primary Schools. The total enrolment in all schools was 13,758 in 1921. The Mission is also carrying on Medical work through five hospitals and eight dispensaries. The total Christian Community in connection with the Mission is 71,380.

Secretary: W. H. Merriam, M.A., Gujranwala, Punjab.

THE AMERICAN PRESBYTERIAN MISSION operates in 3 main sections known as the Punjab, North India and Western India Missions. The American Staff (including women) numbers 243, and the Indian Staff 1,343. There are 33 main stations and about 210 out-stations. Organized churches number 78, 22 of which are self-supporting. There are 10,701 communicants and a total baptized community of 80,640. Educational work as follows: 2 Men's Colleges, and an interest in the Isabella Thoburn and the Kinnsaid Colleges for women, students 1,210; Theological Schools 2, students 35; Training Schools for village workers 2, students 233; High Schools 14, students, 1,424; Industrial Schools 6, Agricultural Demonstration Farms 4; Teachers' Training Departments 7; The Miraj Medical School and an interest in the Ludhiana Medical School for women, students 50; Elementary Schools 248; Schools of all grades 298, pupils 11,559. Medical Work: Hospitals 6; Dispensaries 14. Sunday Schools 819 with 11,437 pupils. Contributions for Church and Evangelistic work on the part of the Indian Church Rs. 37,227.

The Hospital at Miraj, under the care of Dr. W. J. Wanless and Dr. C. E. Vell, is well known throughout the whole of S. W. India, and the Forman Christian College at Lahore under the principalship of Rev. E. D. Lucas, D.D., is equally well-known and valued in the Punjab. The Ewing Christian College (Dr. C. A. R. Janvier, Principal) has grown rapidly in numbers and influence.

Secretary of Council of A.P. Missions in India Rev. H. D. Griswold, D.D., Ph.D., Lahore.
Secretary, Punjab Mission: Rev. C. H. Rice, M.A., Lahore.

Secretary, North India Mission: Rev. W. T. Mitchell, M.A., Mainpuri, U. P.

Secretary, Western India Mission: Rev. M. W. Strahler, M.A., Kolhapur.

THE NEW ZEALAND PRESBYTERIAN MISSION.—Commenced as recently as 1910 at Jagadhri, Punjab.

Secretary: Miss M. Salmond, M.A., Jagadhri.

THE CANADIAN PRESBYTERIAN MISSION.—Commenced in 1877; has 15 main stations in the Indore, Gwalior, Rutlam, Dhar, Alrajpur, Barwani, Jabat, Jaora, Sitamau, Banswara and other Native States. The Mission staff numbers 85; Indian workers 290; Organised Churches 14; Communicants, (Sept. 30, 1921) 1,248; Baptised non-communicants, 2,827; unbaptised and catechumens 399. Total Christian Community 4,474.

Educational work comprises Elementary and Middle Schools, High Schools for boys and girls. College, Theological Seminary and Classes. Industrial teaching and work are done in the three Girls' Boarding Schools and in Rasapura Boys' School. Technical and practical training is given in Printing, Weaving and Carpentry. The Medical work is large. There are two General Hospitals, where both men and women are treated, and five Women's Hospitals.

Secretary:—The Rev. J. S. Mackay, B.A., Narmuch, Central India.

THE WELSH CALVINISTIC METHODIST MISSION (OR WELSH PRESBYTERIAN MISSION) established in 1840 with a staff of 52 Missionaries, 600 Native workers occupies stations in Assam in the Khassia and Jaintia Hills, the Lushai Hills and at Sylhet and Cachar. The Khassia language has been reduced to writing, the Bible translated, and many books published in that language by the Mission. A large amount of literature has been produced in the Lushai language also. In 1921, Communicants numbered 21,467; the total Christian community 60,088; organised Churches 571; self-supporting Churches 35. Elementary schools number 555, scholars 17,673; Boarding schools 3, scholars 820, in addition to 1 Industrial school, 4 Training institutions and 1 Theological Seminary. Two Hospitals and 3 Dispensaries provided for 10,000 patients in 1920.

Secretary: Rev. T. W. Rees, Silchar.

THE ARCOT MISSION of the Reformed Church in America (Dutch), organised in 1853 occupies the North and South Arcot and Chittoor districts in S. India with a staff of 48 Missionaries, and 708 Indian ministers and workers. Churches number 17, Communicants 4,462; total Christian community 22,630; Boarding schools 11, scholars 842; Theological school 1, students 27; Voorhus College, Vellore, students 140. High schools 4, Scholars 2,070; Training schools 2, students 145; Industrial schools 2, pupils 95; Elementary schools 224, scholars 6,665. Three Hospitals, 7 Dispensaries with staff of 68 provided for 2,005 in-patients and 50,000 out-patients for the past year.

The Union Mission Medical College for South India and a Union Mission Training School are located at Vellore, the headquarter of the Mission. The Union Mission Tuberculosis Sanitarium for S. India is near Madanapalle, Aroglivaram P. O., Chittoor Dist.

Secretary: Rev. H. J. Scudder, M.A. & B.D., Madanapalle, S. India.

CONGREGATIONAL SOCIETIES.

THE AMERICAN BOARD OF COMMISSIONERS FOR FOREIGN MISSIONS.—Has two large Missions, the American Marathi Mission, and the Madura Mission. The Marathi Mission includes a large part of the Bombay Presidency, with centres at Bombay, Ahmednagar, Satara and Sholapur, and was commenced in 1813, the first American Mission in India. Its activities are large and varied. The staff at the beginning of 1922 consisted of 51 missionaries and 608 Indian workers operating in 198 outstations exclusive of Bombay City. Organised Churches number 71 with 8,986 communicants, and 7,401 adherents. There is a Leper work at Sholapur. The Educational work embraces 18 training and secondary schools, with 867 pupils and 174 primary schools, with 7,781 pupils, three-fifths of whom are non-Christians. A Theological College at Ahmednagar trains for the Indian Ministry. Zenana work and Industrial work are vigorously carried on, the latter embracing carpentry, lace work and carpet weaving. A school for the blind is conducted on both Educational and Industrial lines. 83,000 patients were treated in the Hospitals and Dispensaries of the Mission last year. Special evangelistic work is carried

on amongst the tribes known as the Bhils and Mangs. This Mission was the first to translate the Christian scriptures into the Marathi tongue. At Sholapur, a settlement for Criminal Tribes is carried on under the supervision of Government. *Secretary:* Rev. Alden H. Clark, M.A., Ahmednagar.

THE MADURA MISSION.—In the South of the Madras Presidency, commenced in 1834, has a staff of 63 missionaries and 910 Indian workers, operates in the Madura and Ramnad districts and has a communicant roll of 9,142 and a total Christian community of 26,724 and 32 organised churches, most of which are entirely self-supporting and self-governing. Schools number 292 with 14,923 pupils. There is a Christian College at Madura, high and training Schools for Girls as also Hospitals for men and women; at Pasmalai are a High School, Theological Institution, Trade School, Teachers' Training School and Printing Press. The *Secretary* is the Rev. John J. Banninga, D. D., Pasmalai.

The ARCOT MISSION commenced under the American Board was transferred to the Reformed Church of America in 1851.

THE SCANDINAVIAN ALLIANCE MISSION OF NORTH AMERICA.—Embraces two Branches, one in Bengal and the other in Khandesh. The total mission staff is represented by 12 missionaries and 20 Indian workers. There are 62 communicants and a Christian community of 158. Ten Elementary Schools provide for 200 pupils.

Secretaries: Rev. J. S. Otteson, Navapur, Khandesh, and Miss H. Abrahamson, Domar, Bengal.

THE SWEDISH ALLIANCE MISSION.—Working among the Hills in West Khandesh has 27 missionaries and 64 Indian workers. There are 8 congregations with a total membership of 841, of whom 326 are communicants. There are 13 Elementary Schools, and 4 School Homes. The pupils in all schools are 331.

Secretary: Miss Emma Johanson, Dhanora via Nandurbar, West Khandesh.

THE FREE CHURCH MISSION OF FINLAND.—The total Mission Staff is represented by six Missionaries and 14 Native workers. There are about 120 communicants, five Churches and a Christian Community of about 200. There is one middle school and three day schools. Medical work is carried on, also industrial work (weaving).

Acting Secretary: Miss Krongvist, Lachung; via Gangtok, Sikkim.

THE LONDON MISSIONARY SOCIETY.—Commenced work in India in 1798 and occupies 10 centres in N. India, 12 in S. India and 7 in Travancore. The Mission engages in every form of Missionary activity. The European

staff numbers 160, Indian workers 2,123; Organised Churches 530; Communicants 17,456 and Christian Community 115,068. There are 4 Christian Colleges, students 159; 5 Theological Institutions, students 70; 4 Training Institutions, pupils 114; 22 High schools, pupils 4,849; 25 Boarding schools, scholars 1,167; 9 Industrial schools, pupils 116 and 862 Elementary schools with 36,775 scholars. In Medical work Hospitals number 23, Dispensaries 14, qualified doctors 9 (European), 41 Assistants and 3,971 in-patients and 174,898 out-patients for the year.

The main centres of the Mission in N. India are at Calcutta, Benares and Almora. The Bhowanipour Institution at Calcutta is now a Teachers' Training College. Evangelistic work is carried on amongst the thousands of pilgrims visiting Benares and Almora. It is noted for its Hospital and Leper Asylum. Special efforts are made amongst the Nama Sudras and the aboriginal tribes known as the Majhwars, Cheros and Pankas. The S. India district is divided into the Kanarese, Telugu, Tamil and Malayalam with 12 stations and 472 outstations. At Nagercoil (Travancore) is the Scott Memorial College with 985 students, a Church and congregation said to be the largest in India, and a large Printing Press, the centre of the S. Travancore Tract Society.

N. India Secretary: Rev. J. H. Brown, B.A., B.D., Calcutta.

S. India Secretary: Rev. Geo. Wilkins, Bangalore City.

ALL-INDIA MISSIONS.

THE CHRISTIAN AND MISSIONARY ALLIANCE.—Dates from the year 1893 under the name of the International Missionary Alliance, but a number of its missionaries were at work in Berar Province much earlier. The work is confined to the provinces of Berar, Khandesh and Gujarat. There is a staff of 72 missionaries and 155 Indian workers. The number of Mission stations is 20, with additional outstations. There is a Christian Community of 2,870 people. There are 4 orphanages, 2 for boys and 2 for girls; 2 training schools for Indian workers, and 1 English congregation at Bhusawal. *Chairman, Treasurer and Secretary:*—Rev. W. Moyser, Akola, Berar, C. P.

THE CHURCH OF THE BRETHREN (AMERICAN)—Opened work in 1895, and operates in Broach, Surat and Thana Districts, also in Baroda and Rajpippa States. Its staff number 50 foreign workers including missionaries' wives, and 270 Indian workers. The Baptized (immersed) membership stands at 2,916. Education is carried on in 6 Girls' Boarding Schools, 8 Boarding Schools for Boys, and 81 Village Day Schools and 44 Village Night Schools. Females under instruction number 779, Males 2,639, under total instruction 3,418. Of this number 883 are supported in Boarding Schools and 96 in Training Schools and other institutions of learning. There are 200 teachers of which 58 are women. There are 91 Sunday Schools having 177 teachers and a total enrolment of 3,286. There were 28,422 calls at mission dispensaries in 1922. The foreign medical staff consists of three doctors and four nurses. At Umalla, Rajpippa State, there is a Home for

Babies with 26 inmates. Industrial work is carried on in six of the Boarding schools, and an Industrial Normal Training Institution is under construction at Ankleswar. Evangelistic, Temperance, and Publicity work receives due emphasis; the "Gujrati Sunday School Quarterly" (1800 copies) and the "Prakash Patra," a Christian monthly of 800 copies are published.

THE POONA AND INDIAN VILLAGE MISSION.—Founded in 1893 and for 28 years directed by Mr. Charles F. Reeve. On his retirement in January 1921, a Field Council took charge of operations and continue work in the Poona, Satara and Sholapur districts with 21 European and 38 Indian workers. Indian Christians associated with the work number 64. The main work is evangelistic in the villages, with women's zenana work and schools. Medical work is conducted at Pandharpur and Lonand and a hospital is in use in Pandharpur. The Headquarters are at Nasrapur, Poona Dist. *Chairman of the Field Council:* N.L. Gooden. *Secretary:* J. W. Stothard, Nasrapur.

THE AMERICAN CHURCHES OF GOD MISSION.—Has two missionaries at Bogra, Bengal.

THE INDIAN CHRISTIAN MISSION.—Founded in 1897, has 31 Organised Churches, 10 Missionaries, 24 stations, 41 outstations, 1,392 Communicants, 30 Primary schools and two Industrial Schools in the Ellore district, S. India, stations also in Berenag, Kumson, N. India, and Nuwara Eliya, and Poigabawella, Ceylon. Total Christian Community, 5,838. *Director:* Rev. A. S. Paynter (on furlough); H. T. Roper (acting), Nuwara Eliya, Ceylon.

THE CHURCH OF THE NAZARENE MISSION.—Has its headquarters for Western India at Buldana, Berar, where it has a boys' boarding school for training Native preachers and a girls' school for training Bible women. This mission has 3 stations in Thana District, namely Khadi, Vasind and Murbad. There is a total force of 12 missionaries at present in this part of India, also 28 native preachers and Bible Women.

District Superintendent:—K. Hawley Jackson, Buldana, Berar.

The headquarters for Eastern India are at Kishorganj, Mymensingh District with an orphanage and a force of 7 missionaries; also about 11 preachers and Bible women. This totals 19 missionaries and 39 native preachers and Bible women for the Church of the Nazarene in India.

District Superintendent: F. E. Blackman, Kishorganj, Mymensingh District.

THE TANAKPUR AND LOHAGHAT BIBLE AND MEDICAL MISSION.—Was established in 1910. It is now carried on in Tanakpur and District only, that neighbourhood having again been attached to the Naini Tal District in Kumaon. *Address:* Tanakpur, Rohilkhand and Kumaon Railway, United Provinces.

THE HEPHEZIBAH FAITH MISSIONARY ASSOCIATION.—Has six missionaries. *Agent:* D. W. Zook, Adra, B. N. Ry.

THE TIBETAN MISSION.—Has 4 Missionaries with headquarters at Darjeeling, and Tibet as its objective. *Secretary:* Miss J. Ferguson, Darjeeling.

THE INDIAN MISSIONARY SOCIETY OF TINNEVELLY (DORNAKAL MISSION).—Opened in 1904 operates in the Warangal District of the Nizam's Dominions. It is the missionary effort of the Tamil Christians of Tinnevely. There are now 3,200 Christians in 92 villages. *Secretary:* Rev. Samuel Pakkianathan, Palamcottah.

THE MISSION TO LEPERS.—Founded in 1874, is an inter-denominational and international Society for the establishment and maintenance of Asylums for Lepers and Homes for their untainted children, working in 12 countries but largely in India, China and Japan. Its work in India is carried on through co-operation with 33 Missionary Societies. In India alone the Mission now has 42 Asylums of its own with over 6,000 inmates and is aiding or has some connection with work for lepers at 21 other places in India. Altogether in India over 7,000 lepers are being helped. In the Mission's own and aided asylums in India there are nearly 4,000 Christians.

An important feature of the work of the Mission is the segregation of the untainted or healthy children of lepers from their diseased parents. Nearly 600 children are thus segregated and saved from becoming lepers.

Most of the Mission's income is received from voluntary contributions. Some funds are raised in India, but the bulk of the money expended by the Mission in India, was received from Britain, although the Provincial Governments give regular maintenance grants.

There is an Indian Auxiliary of the Mission to Lepers, of which H. E. Lady Lloyd who represents the Bombay Presidency is a Vice-President.

The General Secretary of the Mission is Mr. W. H. P. Anderson, 33, Henrietta St., Covent Garden, London, W.C. The Rev. Frank Oldrieve, Secretary for India, is in England, and the Acting Secretary for India is Mr. A. Donald Miller, Purulia, Behar.

THE REGIONS BEYOND MISSIONARY UNION.—An interdenominational Society commenced work at Motihari, Behar, in 1900, and now occupies 6 stations and 7 outstations in the Champaran and Saran Districts, with a staff of 15 Europeans, and 40 Indian workers. There are 21 Elementary schools, with 540 pupils, a Girls' and a Boys' Orphanage and Boarding school, communicants number 60.

THE NATIONAL MISSIONARY SOCIETY OF INDIA.—Established 1905, it has a staff of 20 Indian Missionaries and 55 helpers and Volunteers operates in Montgomery District (the Punjab), Nukkar Thasil (U. P.), Halaughat, Mymensingh District (Bengal), Rewah State (C. I.), Jarsaundah (B. & O.) North Kanara (Bombay), Karjat—Karmala Talukas (Bombay), and Trupattur Taluk (N. Arcot). Christian community over 5,000. Eighteen Elementary schools and one High School. Two Dispensaries and one Hospital. Annual expenditure Rs. 50,000. Supported by Indian Christians of all denominations and Provinces. Organ: *The National Missionary Intelligencer* (a monthly journal in English sold at Re. 1 per year post free).

General Secretary: Mr. P. O. Phillip, B.A., N.M.S. Office, Vepery, Madras.

THE SEVENTH DAY ADVENTISTS.—Established in India in 1895. Work carried on in English, Hindi, Urdu, Punjabi, Bengali, Santal, Tamil, Telugu, Malayalam, Marathi, Gujarati, Burmese and Karen including schools, dispensaries and evangelical stations and a publishing house. *President:* W. W. Fletcher; *Secretary and Treasurer:* A. H. Williams, Post Box 15, Poona.

THE AMERICAN MENNONITE MISSION.—Established 1899, works in the C. Provinces. Mission staff numbers 23, Indian workers 80, Church members 1,400, 1 Industrial Training Institution, 1 High School, 2 Vernacular Middle Schools, 1 Men's Home, 2 Homes for untainted children of lepers, 1 Bible School, 2 Orphanages, 1 Widows' Home, 1 Leper Asylum; Elementary Schools, 8; Dispensaries, 6.

Secretary: Rev. A. C. Brunk, Dhantari, C. P.

THE GENERAL CONFERENCE—MENNONITE MISSION.—Started in 1901 in the C. Provinces. Workers number 17; Leper, Medical, Orphan, Zenana, Evangelistic and educational work carried on. *Secretary:* Rev. P. W. Penner, Janjgir, C. P.

THE KURKU AND CENTRAL INDIA HILL MISSION.—Established 1890 in the C. P. and Berar, has a mission staff of 14, Indian workers 22; Churches 6, Communicants 105; Christian community 200; 2 Boarding schools with 93 boarders and 5 Elementary schools. *Secretary:* Rev. Carl Wyder, Ellichpur, Berar, C. P.

THE CEYLON AND INDIA GENERAL MISSION—Established 1892, occupies stations in India in the Colmbatore and Anantapur Districts and also stations in Panadura, Ceylon. Mission staff 31; Indian workers 110; Churches 11, with Communicants 489, and Christian community 1,354; Orphanages 4; Elementary schools 31 pupils 744.

Secretary: Mr. A. Scott, Kadiri, Anantapur District.

THE BOYS' CHRISTIAN HOME MISSION—Owes its existence to a period of famine, was commenced in 1899. Mission staff 9, Indian workers 60. There are elementary schools with three orphanages, two boys and one girl, and a Widows' Home, where industrial training is given. There are four main stations—At Dhond, in the Poona District and at Babraich, Orai and Benares in United Provinces. There are also 14 out-stations. *Director:* Rev. Norton Dhond, Poona District.

Ladies' Societies.

ZENANA BIBLE AND MEDICAL MISSION.—This is an interdenominational society, with headquarters, 33, Surrey Street, London, working among women and girls in seven stations in the Bombay Presidency, 10 in United Provinces, and 3 in the Punjab. There are 82 European Missionary ladies on the staff and 39 Assistant Missionaries, 212 Indian teachers and nurses and 77 Bible women. During 1922 there were 2,646, in-patients in the five hospitals supported by the Society (Nasik, Benares, Jaunpur, Lucknow and Patna), but the Victoria Hospital, Benares, was closed. There were 24,181 out-patients, 80,731 attendances at the Dispensaries. In their 41 schools were 3,295 pupils, and there is a University Department at Lahore. The evangelistic side of the work is largely done by house to house visitations and teaching the women in Zenanas; 1,291 women were regularly taught and 592 houses were visited. The 77 Bible women visited 392 villages; the number of houses was 592.

WOMEN'S CHRISTIAN MEDICAL COLLEGE, WITH WHICH IS INCORPORATED THE PUNJAB MEDICAL SCHOOL FOR WOMEN.—In 1894 the North India School of Medicine for Christian Women was opened in Ludhiana in order to give a Medical Education under Christian influences to Indian Women. Doctor Edith Brown, M. A., M. D. was its Founder and Principal. The School was interdenominational, and trained students for various Missionary Societies.

Clinical work was at first given at the Charlotte Hospital, which belonged to the Ludhiana Zenana and Medical Mission. The Memorial Hospital was opened in 1900, and has now 180 beds. In 1913 Non-Christian Students were also admitted for training, and the name was modified to its present title given above.

In 29 years 116 Medical Students have qualified as Doctors, over 50 as Compounders, over 120 as Nurses, and over 150 as Dais. Plans are now on hand to enlarge both Hospital and College considerably.

THE MISSIONARY SETTLEMENT FOR UNIVERSITY WOMEN was founded in Bombay in 1895 to reach the higher class of Indian ladies, its activities now include a hostel for women students, in addition to educational, social, and evange-

listic work, and a Holiday House for students and other ladies at Jahbordl-tholivad, B. B. & O. I. Ry. *Warden:* Miss Gedge, Rebsch Street, Jacob Circle, P. O., Bombay.

THE MUKTI MISSION, this well-known work of the late Pandita Ramabal, enables upwards of 850 widows, deserted wives and orphans to earn a comfortable living by means of industrial work organised by the Pandita, supported by a good staff of Indian helpers. A staff of 12 European workers do evangelistic work in the surrounding Kedgaon, Poona District.

Disciple Societies.

The India Mission of the Disciples of Christ (Foreign Christian Missionary Society of Cincinnati, Ohio, and Christian Women's Board of Missions of Indianapolis combined) commenced work in 1882; its area Central and United Provinces; number of Indian Churches, 14, and immersed communicants 18,450. The Christian Constituency numbers 2,945. Its staff, including Missionaries' wives, 76; Asst. missionaries 2 and Indian Workers' staff 319. There are 8 Hospitals, 13 Dispensaries, with 109,994 in-patients and out-patients for the past year. Two Orphanages and an Industrial Home show 536 inmates, and one Boarding School for girls and two hostels for boys, 664 inmates. Two leper asylums with 95 inmates. Tubercular Sanatorium at Pindra Road: 44 in-patients during year. In connection with the industrial work a farm of 400 acres has been taken at Damoh, an Industrial School at Damoh which teaches carpentry, needle work industry at Kulpahar which did Rs. 6,200 worth of business last year. Printing work at Jubulpore 3,000,000 pages of Christian Literature last year. There are 8 Middle schools, 34 Primary schools with 2,017 scholars; 2 Boarding schools, with 300 students. An active zenana work is carried on, and there is a home for women and children.

The Australian branch has three Mission stations in Poona District. The Great Britain and Ireland branch has two mission stations, one in Mirzapur District, U. P., and one in Alamu District, Orissa. These have no organic connection with the India Mission of the Disciples of Christ.

Secretary: Rev. W. B. Alexander, Jubbulpore, C.P.

Undenominational Missions.

THE CENTRAL ASIAN MISSION, with a Church, Dispensary and School is found on the N.-W. Frontier, conducted on the lines of the China Inland Mission, and has Kafirstan as its objective.

THE FRIENDS' FOREIGN MISSION ASSOCIATION works in five stations of the Hoshangabad Division of the Central Provinces, and in two of the adjacent Bhopal State, and has also some work going on in that of Gwalior. There are 7 Churches, 15 missionaries, 193 members in full communion, 1,080 Christian adherents, Boarding Schools for Boys and Girls, 1 Anglo-Vernacular School, 14 Day Schools, 2 Hospitals with Dispensaries attached; in addition to a self-supporting weaving community at Itarsi and a Farm Colony at Makoriya, in Hoshangabad District. *Secretary:* Mr. A. Taylor, Sehore Cantonment, C. I.

THE AMERICAN FRIENDS' MISSION with 5 Missionaries is working at Nowgong. *Secretary:* Miss E. E. Baird, Nowgong, C. I.

THE OLD CHURCH HEBREW MISSION was established in 1858, in Calcutta, and is said to be the only Hebrew Christian Agency in India. *Secretary:* The Rev. Walter Plant, 11, Mission Row, Calcutta.

THE OPEN BRETHREN—Occupy 46 stations in the U. Provinces, Bengal, S. Mahratta, Godaveri Delta, Kanarese, Tinnevely, Malabar Coast, Colmbatore and Nilgiri Districts. They hold an annual Conference at Bangalore.

Lutheran Societies.

THE AMERICAN EVANGELICAL LUTHERAN MISSION. General Council, founded in 1844 for the Godaveri and Kistna Districts, has its Headquarters at Rajahmundry. Its staff consists of 24, including Missionaries' wives and Lady Doctors, with 1,892 Indian Workers. The membership is 34,901. There are Boys' and Girls' Central Schools, Mission Press, a well-equipped hospital and Book Depot at Rajahmundry, and a High School at Peddapur and another at Bhimavaram, since November 1918 the two American Lutheran Missions at Guntur and Rajahmundry have been amalgamated, existing as two Conferences now. *Chairman:* The Rev. E. Neudorffer, Bhimavaram.

The General Synod Section of the above has its headquarters in Guntur, founded in 1842. Its Christian Community numbers 63,301 with 21,969 communicants, 32 missionaries inclusive of wives and 1,132 Indian workers. The following institutions are connected with the Mission: a second grade College, High School for Girls, Hospital for women and children, School for the Blind, Normal Training School, and Industrial School. *Secretary:* The Rev. J. R. Strook, Guntur.

THE EVANGELICAL NATIONAL MISSIONARY SOCIETY OF STOCKHOLM, SWEDEN, founded in 1856, occupies the districts of Saugor, Betul, and Chhindwara in the Central Provinces. There are about 1,900 Church members constituted into an indigenous Church with 12 local congregations. The European and Indian staff numbers 24 and 154 respectively. One Theological Seminary for training catechists and pastors, and one training school for training Bible Women. 88 Day Schools with 1,442 children. 35 Sunday Schools with 1,121 children. 10 Dispensaries with 39,068 patients during 1922. 3 Workshops, one of them with an aided Carpentry School. One Female Industrial School, one Widows' Home, 6 Orphanages and one Boarding School for Christian Children. At the end of 1922 there were 165 boys and 218 girls in these institutions.

Chairman and Secretary: Rev. P. E. Froberg, Chhindwara, C. P.

THE KANARESE EVANGELICAL MISSION with Headquarters at Mangalore, South Kanara, was organised on January 1st, 1919, to take over the Mission work done formerly by the Basel German Evangelical Mission in two of her fields, namely, the Districts of South Kanara and South Mahratta. The missionaries and the majority of the Funds come from Switzerland. Part contributions are received from the late Basel Mission Industrial Department, now under British ownership and manage-

ment as the "Commonwealth Trust Limited." The Mission has 12 chief stations and 56 outstations with a total missionary staff of 30 and 360 Indian workers. There are 66 organised congregations with a total membership of 11,383, which gave last year Rs. 13,486 for church and mission work. Educational work embraces 66 schools, of which there are 3 High Schools. The students number 7,902.

Medical work is done at Betgeri with a full staff and a hospital and two branch hospitals and dispensaries. A women's and children's hospital has been opened in June 1923 at Udupi.

The Mission maintains a Home-Industrial department for women's work, and a large Publishing department at Mangalore with a bookshop and a printing press occupying some 150 hands and doing work in many languages.

Secretary: Dr. P. de Benoit, Mangalore.

THE CHURCH OF SWEDEN MISSION—Was founded in 1874. Operated till 1915 in the Madura, Tanjore, Trichinopoly and Rannad Districts. Since 1915 the Mission having taken full charge of the former Leipzig Evangelical Lutheran Mission field, works also in the Madras, Chingleput, Colmbatore, Salem and S. Arcot Districts with diaspora congregations in Rangoon, Penang and Colombo. European staff numbers 30, ordained Indian Ministers 41; Indian workers 83; organised churches 42; Baptised membership 22,616; Schools 321; pupils 16,292 (12,780 boys and 3,512 girls); and teaching staff 755. *Secretary:* Rt. Rev. Bishop E. Heuman, D.D., Trichinopoly.

THE MISSOURI EVANGELICAL LUTHERAN MISSION—is located in North Arcot, Salem, Tinnevely, Travancore and the Kolar Gold Fields, with 20 missionaries, 1 doctor, 3 nurses (American), 1 Zenana worker and 1 Lady educationist. Besides the three Training Institutions there are 1 High School at Ambur and among the Elementary schools three are complete Higher Elementary. In addition to evangelistic and educational work, the Mission has now an up to date Dispensary and Lying-in Hospital with 18 beds in Ambur and a dispensary in Barqur (Salem). *Secretary:* Rev. T. Gut-Knecht, Nagercoil, S. Travancore.

THE DANISH EVANGELICAL LUTHERAN MISSION—Established 1863 in South Arcot, working there and in North Arcot, on the Shevaroy Hills and in Madras, has a total staff of 214 Indian and 45 European workers, Communicants 1,050, Christian community 3,000, 1 High School, 2 Boarding Schools, 4 Industrial Schools, Elementary Schools 68, total scholars 8,464. *Chairman:* Rev. J. Bittmann, 88, Broadway, Madras.

THE SANTAL MISSION OF THE NORTHERN CHURCHES (formerly known as the India Home Mission to the Santals)—Founded in 1867, works in the Santal Parganas, Goalpara (Assam), Malda and Dinajpur. Work is principally among the Santals. The mission staff numbers 27; Indian workers 480; communicants 4,000; Christian community 23,000; organised churches 36; boarding schools 4; pupils 508; elementary schools 69; pupils 1,035; industrial schools 2; Orphanage 1; children 29. *Secretary:* Rev. P. O. Boddington.

MISSIONS AND ENEMY TRADING ACT.—In May 1918, the following notice regarding Missions was published in the "Gazette of India":—"The following missions or religious associations are declared companies under Act 2 (the Enemy Trading Act) of 1918:—The Leipzig Evangelical Lutheran Mission, Madras, the Hermansberg Evangelical Lutheran Mission, Madras, the Schleswig-Holstein Evangelical Lutheran Mission, Madras, the Gosner Evangelical Lutheran Mission of the United Provinces and Behar and Orissa, the German Evangelical Lutheran Mission of Ranchi, Behar and Orissa. The Governor-General in Council notifies that the powers conferred under Section 7 of the said Act shall extend to the property, movable and immovable, of these missions or religious associations."

In June, 1919, the Government of India stated:—"Effect is already being given to the suggestion that enemy missions in India should be taken over by British societies. The properties and undertakings of hostile missions have been vested in the Provisional Custodian of Enemy Property with a view to their transfer to boards of trustees composed partly of non-official members nominated by the National Missionary Council of India with the approval of the Government of India and partly of Government officials, and those Boards of Trustees will in due course transfer the undertakings and properties to a missionary society to be selected by them with the approval of the Governor-General in Council."

Methodist Societies.

The Methodist Episcopal Church is the organization in the United States of America which grew out of the Wesleyan revival in England and her American colonies during the latter part of the eighteenth century. This Church began its work in India in 1836, at first confining its activities to what is now the United Provinces. From that centre it spread until the outposts of its work were found in Baluchistan, Burma, Malaysia, Netherlands Indies and the Philippine Islands. In 1920 a rearrangement of the mission field of the Church separated India, Burma and Baluchistan into what is now known as the Southern Asia division. Within this present field the Church now has a total baptized Christian community of 426,546, of whom 35,310 were added the year ending with 1922.

The avowed task of the Church has been the uplift of the depressed classes, and its work has been largely among that class. As a matter of fact, however, it has large numbers who came from the Mohammedans and the caste Hindus, and among such its influence is extending.

The educational work of the Church is extensive, it having in this area a total of 1,627 schools of all grades, including three colleges twenty-two high schools, and numerous normal training and the logical institutions. The registered attendants in these schools number 46,750.

Special effort is made for the instruction and development of the young people of the Church, there now being 798 chapters of the Epworth League with 26,477 enrolled members, and 6,120 organized Sunday Schools with an enrolment of 196,363.

The publishing interests of the Church are represented in two presses at Madras and Lucknow, the former doing work in four vernaculars and the latter in six. The periodicals issued cover the interests of both the evangelistic and the educational field, the Indian Witness, the Junior Methodist and Methodist Education being in English, while the *Kaukab-i-Hind*, the *Rafiq-i-Niswan*, the *Bal Hit Karak*, and other periodicals for women and children are issued in several of the vernaculars, as are lesson helps of various grades for the Sunday Schools.

The governing body of the Church is the General Conference held quadrennially, in which the ten conferences now existing in India are represented by twenty-six delegates. The polity of the Church in India looks forward to complete independence under the general governing body, there at present being but about three hundred and fifty American men and women as compared to 480 ordained and 2,200 unordained Indian and Burmese workers. At present the area is divided into seventy-two districts each in charge of a superintendent and among whom are many Indians. The work is supervised by four Bishops, elected by the General Conference, and resident as follows: Bishop Frank W. Warno, Lucknow; Bishop John W. Robinson, Bombay; Bishop Frederick B. Fisher, Calcutta; and Bishop H. Lester Smith, Bangalore.

The American Wesleyan Methodist Mission, Sanjan, Thana District Headquarters. Stations with missionaries, Danda Maroli, *via* Nargol, Thana District. Vapi (Daman Road Station), Surat District. Pardi, Surat District. Ten missionaries on field. Two on furlough. One under appointment. Four main stations. Two boarding schools. One industrial school, One Bible school. Six village schools. *Superintendent*, C.B. Harvey, Sanjan, Thana District.

The Reformed Episcopal Church of America (Methodist) at Lalitpur and Lucknow, U.P., has 2 Missionaries, 4 Outstations, 2 Orphanages, and a membership of nearly 100.

THE WESLEYAN METHODIST MISSIONARY SOCIETY commenced work in India in 1817 (Ceylon in 1814). The Mission in India, apart from Ceylon, is organised into 8 District Synods with 2 Provincial Synods. There is a large English work connected with the Society, 20 ministers giving their whole time to Military work and English churches.

The districts occupied include 64 main stations in Bengal, Madras, Mysore, Bombay, Punjab, Central Provinces, Hyderabad (Nizam's Dominions), United Provinces and Burma. The European staff numbers 98 with 61 Indian Ministers and 615 Indian workers; Communicants 15,668, and total Christian community 68,892. There are 8 large numbers of organized Churches many of which are self-supporting.

Educational work comprises 3 Christian Colleges, students, 1,993; 5 Theological Institutions, students, 283; 10 High Schools, pupils, 4,524; 14 Industrial schools, pupils, 400; 707 Elementary schools, with 23,084 scholars. In Medical work there are 8 hospitals, 6 dispensaries, 1,088 in-patients and 43,227 out-patients. The Society expended over \$26,000 on its Indian Missions in 1922.

The Women's Auxiliary carry on an extensive work in the places occupied by the men's society. There are 71 women workers from Britain of whom 9 are qualified doctors. The Indian women workers number 271. There are 116 girls' day schools with 13,377 pupils and 31 boarding schools with 1,979 boarders. There are several philanthropic institutions for the rescue and training of women. The Women's Auxiliary manage 12 hospitals and 3 dispensaries, which had 5,788 in-patients and 70,529 out-patients. The cost of the work to the Women's Auxiliary in 1922 was over £20,000.

Vice-Chairman of General Synod: Rev. D. A. Rees, Mysore.

The Woman's Foreign Missionary Society of the M. E. Mission is divided into 9 Conferences and is co-extensive with the main work of the Mission. 210 Lady Missionaries are engaged in Educational, Zenana, Evangelistic and Medical work. The Secretary for the Bombay Conference is Miss A. A. Abbott, B.A., Basim, Berar.

THE FREE METHODIST MISSION of North America—Established at Yeotmal, 1893, operates in Berar with a staff of 19 Missionaries and 42 Indian workers. Organised churches 4, 1 Theological school and 5 Elementary schools, and 2 Anglo-Vernacular schools and Dispensaries 3. *Secretary:* Rev. Elizabeth Moreland, Wun, Berar.

THE SALVATION ARMY.

For many years the operations of the Salvation Army in India were under the immediate direction of eight Territorial Commanders, in part responsible to Commissioner Booth-Tucker, as Special Commissioner for India, and in part to International Headquarters. The General recently decided to divide the country into four distinct Commands, each under its own Territorial Commissioner and directly responsible to International Headquarters.

Northern India.—The area under this command is the S. A. work in the whole of the Punjab and the United Provinces with Headquarters at Lahore.

In addition to an extensive evangelistic work in the Punjab, and in several centres in the United Provinces, there are a number of Settlements for the Criminal Tribes in the United Provinces (where this important work was first introduced) and several also in the Punjab.

In the Punjab is also situated an agricultural settlement consisting of a large village of 1,800 inhabitants who cultivate some 2,000 acres of land, in which they will gradually acquire proprietary rights, the Government having given it to the Salvation Army on easy terms. This is proving to be very successful.

Other industries include Weaving Schools, Agricultural, Dairy and Fruit Farms, Day and Boarding Schools, a Home for stranded Europeans, and for British Military Soldiers, a Hospital and Dispensaries.

Village Centres occupied, 1,738; Officers, 859; Employees, 260; Social Institutions, 23.

Territorial Headquarters: S. A., Ferozepore Road, Lahore, Punjab.

Territorial Commander: Lt. Commissioner Jai Kumar (Toft).

Chief Secretary: Lt.-Colonel Muthiah.

Western India.—The three Territories of Bombay, Guzerat, and Maratha now form the Territory of Western India.

Besides the distinctly evangelistic operations, there are established a large General Hospital—Thomas Emery Memorial—several Dispensaries, at which during the year about 20,000 patients are treated, over 240 Day and Boarding Schools, also a Boarding School

and Hostel for Bhil Children, a Home for Juvenile Criminals, an Industrial Home for Women, a British Soldiers' and Sailors' Furlough Home, Weaving and Silk Schools; a Factory for Weaving, Warping, and Reeling Machines, and a Land Colony having a population of some hundreds of Salvationists.

Corps, 239; Outposts, 523; Officers, 634, of whom 589 are Indian; employees and teachers, 123; Social Institutions, 15.

Territorial Headquarters: S. A., Moreland Road, Byculla, Bombay.

Territorial Commander: Commissioner Horskins.

Chief Secretary: Lt.-Col. Jaya Prakas (Gore).

Southern India.—The newly formed Territory comprises what until the end of 1919 were the three Territories, Madras and Telugu, South India (Travancore). One of the earliest fields in India was the State of Travancore. Here whole communities have become Salvationists. In the villages around Nagercoil some hundreds of women have been taught lace-making and needlework. At Bangalore, what is generally acknowledged as the premier Silk School in India is established. Scores of Silk and Weaving Masters have been trained there, and due regard is paid to the spiritual welfare of the students. A Home of Rest for Sick Officers is situated in the Nilgiri Mountains. The Catherine Booth Hospital in Travancore, under the skilful direction of Staff Captain Dr. Noble, has been the centre of the Medical Work in that part of India where Students and Nurses are trained, and where thousands of patients receive attention every year. There are other branch Hospitals and Dispensaries in the Madras.

There are 1,443 Corps and outposts, i.e., Villages in which work is systematically carried on; 1,343 Officers and teachers; 413 Day Schools; 5 Hospitals; 6 Boarding Schools; 5 Criminal Tribes Settlements; 2 Industrial Departments; 1 Rescue Home; and 1 Silk Farm.

Territorial Headquarters: S.A., The Broadway, Madras.

Territorial Commander: Commissioner Sukh Sing (Blowers).

ROYAL ARMY TEMPERANCE ASSOCIATION.

In 1862 there was started among the British troops in Agra a small Society, under the leadership of Rev. G. Gregson, Baptist minister, which after a short time took the name of the Soldiers' Total Abstinence Society.

For some ten years the Society struggled with varying success, spreading to other Garrison

Stations, but at the end of that time, though it had obtained recognition from the Horse Guards, and was the first Society whose Pledge was so recognised, the membership was not more than 1,200. In the year 1873, however, through the influence of the then Commander-in-Chief, the work was placed

on a firmer footing, the Rev. Gelson Gregson gave up his whole time to it, and accompanying the troops through the Afghan War, making an extended tour through Egypt, and bringing the work into close touch with troops, both during peace and war, in the year 1886, when he left the Society, it numbered about 11,000 members. He was followed by a Madras Chaplain, who after two years gave place to the Rev. J. H. Bateson. In 1886, the late Lord Roberts, Commander-in-Chief, organised his Scheme for Regimental Institutes, which have had a wonderful effect on the life of British soldiers in the East; and the Total Abstinence Society was so far incorporated into the scheme as to be allowed ample accommodation, and many practical benefits, in every Unit. At the same time the name was changed to that of the Army Temperance Association, and the work of various societies thus linked together, under one organisation. The effect has been more than even the inaugurator himself ever hoped for. The membership rose steadily from that date and still increases.

Growth of the Society.—In 1889 there were 12,140 members; in 1899, 20,688; in 1909, 30,220, while in 1913-14, the total was 35,000, or over 45 per cent. of the total garrison in India. In 1908, the Secretary having retired after 20 years' work, the Rev. H. C. Martin, M.A., a Chaplain in Bengal, was selected by H. E. Lord Kitchener, to the post of Secretary. Twenty years ago, the Association, which has now for some years been the Royal Army Temperance Association, with the Patronage of King Edward VII, and later of the King-Emperor, George V, organised a similar Society in Great Britain, with headquarters in London, from which the troops in South Africa, the Mediterranean, etc., are controlled, so that the whole British Army receives the attention of the Association.

Varied Activities.—What primarily has been the effort of the Association, namely, the decrease of Intemperance, and promotion of sobriety among soldiers has gradually grown into work of every kind, in the interests of soldiers; promotion of sport, occupation of spare time, assistance towards employment in Civil Life, advice and information on the subject of Emigration, provision of Furlough Homes, all tend to enlist the support of officers and men in the Association, and add to its value to them, and to the efficiency of its work, generally. The wonderful change that in late years has taken place in the character of the British Army, in India especially, is due to various causes, including the increased interest in games and sports, the spread of education, the different class of men enlisted, and so on, but the R. A. T. A. has always been given its due share among other causes, by all authorities and Blue Books, and particularly by Officers Commanding Divisions, Brigades and Units. These changes in conduct are seen most plainly in the increased good health of the Army in India.

Effect in the Army.—In the year 1889, 1,174 British soldiers died in India, and 1,800 were invalided unfit for further duty;

in 1910, only 880 died, and 484 were invalided. In 1889, 688 underwent treatment for Delirium tremens; in 1910, only 37. In conduct the same difference is to be found; as late as 1901 as many as 545 Courts Martial were held on men for offences due to excessive drinking; in 1906 only 217. In 1904, 2,281 good conduct medals were issued; in 1910, there were 4,581. In regard to the character of the men themselves, who become members of the Association, during their service, we find that in 1912, 59 per cent. on transfer from the Colours obtained Exemplary characters, and 93 per cent. either Exemplary or Very Good; the remainder were for the most part men who, after some years of heavy drinking, had towards the end of their service been persuaded to try and reform themselves, but not soon enough to avoid the consequences of previous excess.

Organisation.—The War has necessarily brought increased work upon this society, the results of which were very quickly apparent. Capacious reception sheds fitted up in the Docks at Bombay and Karachi, proved of the greatest value to troops moving from India, and to the large number coming in: special arrangements aided by a loan from the Government of India, enabled the R. A. T. A. to organise branches in every Territorial unit immediately on arrival, special attention being paid to small detachments and to the Hill stations. In consequence there were, within a month of the completion of the Garrison, over 70 Territorial Branches, containing nearly 50 per cent. of the new arrivals, and this has increased consistently ever since. During the war in addition to covering all troops from Aden to Singapore, the R. A. T. A. was the only Society working in Mesopotamia. Institutes were opened and the cordial good will of the authorities enabled the R. A. T. A. to provide many amenities to the very trying experiences of that Force. The men relieved, and sent back to India for periodic rest, in addition, received a warm welcome and entertainment at the hands of the Association. The following is the organisation of the Council and management:—

Patron: His Majesty the King-Emperor.
President: His Excellency the Commander-in-Chief.

Council:

The General Officers, Heads of Departments; Army Headquarters.
The General Officers Commanding Division.
Two Officers Commanding Regiments.
Officers of the R. A. M. C. and I. M. S.
Two Regimental Quartermasters.
Representatives of the various Churches

Executive Committee:

Col. J. F. Tyrrell, C.B.E., President,
Lt.-Col. F. G. Moore.
Major R. N. G. Scott.

General Secretary: Miss V. T. Blanchfield.

Auditors: Nelson, Dignasse & Co.

Bankers: Imperial Bank of India, Ltd.

Head Office: Talbot House, Simla.

Warrant of Precedence.

A new Warrant of Precedence for India in supersession of the notification published on February 10, 1899, which has been approved by His Majesty the King Emperor of India, was published in 1922. Henceforth the following table will be observed with respect to the rank and precedence of persons named, as under:—

1. Governor-General and Viceroy of India.
2. Governors of Provinces within their respective charges.
3. Governors of Madras, Bombay and Bengal.
4. Commander-in-Chief in India.
5. Governors of the United Provinces, Punjab, Bihar and Burma.
6. Governors of the Central Provinces and Assam.
7. Chief Justice of Bengal.
8. Bishop of Calcutta, Metropolitan of India.
9. Members of the Governor-General's Executive Council.
10. Commander-in-Chief of His Majesty's Naval Forces in the East Indies.
11. President of the Council of State.
12. President of the Legislative Assembly.
13. Chief Justice of a High Court other than that of Bengal.
14. Bishops of Madras and Bombay.
15. Agents to the Governor-General in Rajputana, Central India and Baluchistan, Chief Commissioner of the North-West Frontier Province, Members of Executive Councils and Ministers of Governors and Lieutenant-Governors, Political Resident in the Persian Gulf, Residents at Hyderabad and in Mysore, and Commissioner in Sind,—within their respective charges.
16. Chief of the General Staff; General Officers Commanding, Northern, Southern, Eastern and Western Commands, and Officers of the rank of General.
17. Members of the Executive Councils and Ministers in Madras, Bombay and Bengal.
18. Members of the Executive Councils and Ministers, United Provinces, Punjab, Burma and Behar.
19. Agents to the Governor-General in Rajputana, Central India and Baluchistan; Chief Commissioner of the North-West Frontier Province; Political Resident in the Persian Gulf; and Residents at Hyderabad and in Mysore.
20. Members of the Executive Councils and Ministers, Central Provinces and Assam.
21. Presidents of Legislative Councils within their respective Provinces.
22. Chief Judges of Chief Courts; and Puisne Judges of High Courts.
23. Lieutenant-Generals.
24. Comptroller and Auditor-General; President of the Public Service Commission; and President of the Railway Board.
25. Bishops of Lahore, Rangoon, Lucknow and Nagpur.
26. Members of the Railway Board and Secretaries to the Government of India.
27. Additional Secretaries and Joint Secretaries to the Government of India; Commissioner in Sind; Financial Adviser, Military Finance; and Judges of Chief Courts.
28. Chief Commissioner of the Andamans; and Chief Commissioner of Delhi,—within their respective charges; Chief Secretaries to the Governments of Madras, Bombay and Bengal; Agent to the Governor-General, Punjab States, when within the Punjab.
29. Commissioner of Revenue and Customs, Bombay; Development Commissioner, Burma; Director of Development, Bombay; Director-General, Indian Medical Service; Director-General of Posts and Telegraphs; Financial Commissioners; Inspector-General of Irrigation; Judicial Commissioners of Oudh, Central Provinces, Sind and Upper Burma; Major-Generals; members of a Board of Revenue; Surgeon-Generals.
30. Vice-Chancellors of the Indian Universities.
31. Agents of State Railways; Controller of the Currency; Additional Judicial Commissioners; Agency Commissioner, Madras; Commissioners of Divisions, and Residents of the 2nd Class,—within their respective charges.
32. Members of the Indian Civil Service of 30 years' standing (not holding any other appointment mentioned in this Warrant).
33. Advocate-General, Calcutta.
34. Advocates-General, Madras and Bombay.
35. Chief Secretaries to Governments other than those of Madras, Bombay, Bengal and Assam.
36. Bishops (not territorial) under license from the Crown.
37. Accountants-General, Class I; Agricultural Adviser to the Government of India; Archdeacons of Calcutta, Madras and Bombay; Census Commissioner for India; Colonels Commandant and Colonels on the Staff; Commissioner, Northern India Salt Revenue; Director, Intelligence Bureau; Director-General of Archaeology in India; Director of the Geological Survey; Director, Royal Indian Marine, when an officer of the Royal Navy of rank lower than Rear-Admiral or an officer of the Royal Indian Marine; Educational Commissioner with the Government of India; Financial Adviser to the Railway Board; His Majesty's Senior Trade Commissioner, Calcutta; Inspector General of Forests; Military Accountant-General; Opium Agent, Benares; Sanitary Commissioner with the Government of India; and Surveyor General of India.
38. Additional Judicial Commissioners; Agency Commissioner, Madras; Chief Commissioner of the Andamans; Chief Commissioner of Delhi; Chief Secretary to the Government of Assam;

Commissioners of Divisions; and Residents of the 2nd Class.

39. Private Secretary to the Viceroy; Secretaries; Additional Secretaries and Joint Secretaries to Local Governments.

40. 1. The entries in the above table apply exclusively to the persons entered therein, and while regulating their relative precedence with each other, do not give them any precedence over members of the non-official community resident in India who, shall take their place according to usage.

2. Officers in the above table will take precedence in order of the numbers of the entries. Those included in one number will take precedence *inter se* according to the date of entry into that number.

3. When an officer holds more than one position in the table he will be entitled to the highest position accorded to him.

4. Officers who are temporarily officiating in any number in the table will rank in that number below permanent incumbents.

5. All officers not mentioned in the above table, whose rank is regulated by comparison with rank in the army, to have the same rank with reference to civil servants as is enjoyed by military officers of equal grades.

6. All other persons who may not be mentioned in this table to take rank according to general usage, which is to be explained and determined by the Governor-General in Council in the case any question shall arise. When the position of any such person is so determined and notified, it shall be entered in the table in italics, provided he holds an appointment in India.

7. Nothing in the foregoing rules to disturb the existing practice relating to precedence at the Courts of Indian States or on occasions of intercourse with Indians, and the Governor-General in Council to be empowered to make rules for such occasions in case any dispute shall arise.

8. The following will take courtesy rank as shown:—

Consuls-General, Immediately after article 37, which includes Colonels Commandant; Consuls,

Immediately after article 40, which includes Colonels; Vice-Consuls, Immediately after article 63, which includes Majors.

Consular officers de carriere will in their respective grades take precedence of consular officers who are not de carriere.

9. The following will take courtesy rank as shown, provided that they do not hold appointments in India:—

Peers according to their precedence in England; Knights of the Garter, the Thistle and St. Patrick; Privy Councillors; Members of the Council of the Secretary of State for India.—Immediately after Members of the Governor-General's Executive Council, article 9.

Baronets of England, Scotland, Ireland and the United Kingdom, according to date of Patents, Knights Grand Cross of the Bath; Knights Grand Commander of the Star of India; Knights Grand Cross of St. Michael and St. George; Knights Grand Commander of the Indian Empire; Knights Grand Cross of the Royal Victorian Order; Knights Grand Cross of the Order of the British Empire; Knights Commander of the Bath; Knights Commander of the Star of India, Knights Commander of St. Michael and St. George; Knights Commander of the Indian Empire; Knights Commander of the Royal Victorian Order; Knights Commander of the Order of the British Empire; and Knights Bachelor.—Immediately after Puisne Judges of High Courts, article 22.

10. All ladies, unless by virtue of holding an appointment themselves they are entitled to a higher position in the table, to take place according to the rank herein assigned to their respective husbands, with the exception of wives of Peers and of ladies having precedence in England independently of their husbands, and who are not in rank below the daughters of Barons; such ladies to take place according to their several ranks, with reference to such precedence in England, immediately after the wives of Members of the Governor-General's Executive Council.

Routes between India and Europe.

The Indian port for the direct journey to and from Europe is Bombay. There are ordinarily five lines of steamers by which the journey to and from the West *via* Bombay can be performed, either by sea all the way, or—and in some cases only—by sea part of the way and by rail across Europe. They are the P. & O., the Anchor Line, the City and Hall Line, the Lloyd Triestino and the British India Line. The Natal line steamers are available for Western passages only, the steamers sailing round the Cape on their Eastward voyages. There are ordinarily other services between Calcutta and

the West, by steamers sailing round Ceylon, and several lines connect Colombo with Europe. Of the latter the Orient, the Messageries Maritimes the Bibby Lines N.Y.K., Australian Commonwealth, & Royal Dutch Lines are the chief besides the P. & O. The Bibby and Henderson services extend to Rangoon. The new railway between India and Ceylon greatly increases the importance of the Colombo route for Southern India. The shortest time between London and Bombay is 15 days *via* Marseilles. The following are the fares which are convertible at approximately current rates of exchange:—

Peninsular and Oriental S. N. Co.

FARES FROM BOMBAY OR KARACHI.					1st Saloon.			2nd Saloon.

FROM CALCUTTA					70	56	..

By the **British India S. N. Co.**, fares to London by sea from Bombay or Madras are:—single 1st saloon £60; 2nd saloon £52. Return £116 and £91. Bombay to Marseilles £60, and 2nd saloon £48. Return: £105 and £84.

By the **Anchor Line** fares to Liverpool from Bombay or Karachi are:—1st saloon £80 single and £105 return. To Marseilles:—£56 and (return from Liverpool) £101.

By Ellerman's "**City**" and "**Hall**" Lines fares from Bombay or Karachi to Liverpool, 1st saloon are:—

single £64, return £112.
2nd saloon single £48, return £84.
From Bombay or Karachi to Marseilles,
1st saloon single £60, return £105.
2nd saloon single £45, return £79.
Calcutta to London.
1st saloon single £68, return £110.
2nd saloon single £52, return £91.

By **Bibby Line** fares from Rangoon to London.

1st saloon single £76.
1st saloon return £132.
Rangoon to Marseilles, 1st saloon single £68,
Rangoon to Marseilles, 1st saloon return £120.

By **Henderson Line** fares from Rangoon to Liverpool, 1st saloon are:—single £65, return (available for 4 months) £100, (available for 2 years) £117.

By **Lloyd Triestino Line** fares from Bombay or Karachi to Brindisi, Venice or Trieste are:—1st class £82, 2nd class £52. Return rates available for 2 years at one and three-fourth fares.

The **Lloyd Triestino** in conjunction with the **Marittima Italiana** are now running in addition to the above a fortnightly service between Bombay, Naples and Genoa, fares as above.

INDIAN TRAIN SERVICE.

The distances and railway fares from Bombay to the principal centres of other parts of India are as follow :—

	Miles.	1st Class.	2nd Class.
		Rs. a.	Rs. a.
Deihi, B. B. & C. I. Railway, <i>via</i> new Nagda-Muttra direct route	865	105 8	52 12
Delhi, G. I. P. Railway, <i>via</i> Agra	957	105 8	52 12

Calcutta, G. I. P. from Bombay, <i>via</i> Jubbulpore & Allahabad	1,349	150 14	75 8
Calcutta, G. I. P. from Bombay, <i>via</i> Nagpur.	1,223	142 14	71 8
Madras, G. I. P. from Bombay, <i>via</i> Raichur	794	112 0	55 15
Lahore, <i>via</i> Delhi	1,162	142 10	71 5

THE SUEZ CANAL.

The annual report of the **Suez Canal Company** for 1922 stated that in certain countries a revival in trade had begun to assert itself, and the maritime movement had surpassed the previous maximum, which was the more remarkable when existing circumstances were taken into consideration.

The growth of traffic caused a large increase in the company's receipts, and expenses were slightly less than in 1921. The repayment of Consolidated Coupon Bonds had relieved the company of a heavy charge, and it was therefore decided to declare an appreciable increase of dividend, whilst still maintaining the prudent policy which had always guided the board.

The same amounts as on the last occasion had been allocated to the sinking fund for stock, and to the fund for house building in Egypt. It had also been thought advisable to set aside from profits a sum of 25,000,000 as part of the expenses incurred in the works improvement fund. This would avoid, or at least delay for several years, the necessity of a loan, which had been already authorized, and greatly reduce the amount required. It was proposed to pay a dividend of 320f. net per share, almost double that paid before the war. In making this comparison, however, it should be borne in mind that part of the dividend was due to the depreciation of the franc.

Reduced Transit Rates.—The increase in traffic had permitted, from March 1, 1923, a reduction of transit rates of 25c. which was in conformity with the liberal policy hitherto adopted, thereby assisting the shipping industry, which was still passing through a difficult period. The continued progress in traffic which had justified the reduction had since been well maintained; moreover, the high rates of exchange

permitted the remittance of money from Egypt or from England to France on exceptional terms, a condition, however, which it was hoped might ere long be modified.

Financial Position.—The total receipts for 1922 amounted to 305,455,608f., an increase of 45,319,612f. over the year 1921, of which transit dues supplied 17,551,225f. Expenses in Egypt were about the same as in 1921. After making allowance for depreciation of investments, expenses, and provision for buildings, stock, and works, the receipts over expenses amounted to 193,797,839f. to which had to be added 949,707f. brought forward, making a sum of 194,747,547f. This left an amount for distribution amongst the shareholders of 192,641,126f., and provided for the payment of a dividend of 341f. 93 c. per share, to which was to be added 25f. for interest, representing a gross return of 366f. 93-8c., or a net amount of 320f., which exceeded that of 1921 by 75f. per share.

It was interesting to note that, in spite of the increased dividend, the revenue paid to the British Government was much less than in 1913.

Transit and Navigation.—Four thousand three hundred and forty-five ships traversed the Canal in 1922, representing a net tonnage of 20,743,245, an increase of 468,125 tons over the highest previously reached—that in 1912. Compared with 1921 the increase in ships is 370, or 2,624,246 tons. There was an ever-increasing number of vessels burning Mazout, representing 19 per cent. of the total movement of the year. The average time of transit was 15hr. 36min. German shipping was more in evidence, having passed the 1921 figures of 170,520 tons to 735,129 tons, a number much less than when Germany occupied second rank among the Canal's customers in 1913, with 3,352,287 tons.

Improvement Schemes.—It was announced in 1914 that from and after January 1st, 1915, the maximum draught of water allowed to ships going through the Suez Canal would be increased by 1ft., making it 30ft. English.

The maximum permissible draught of ships using the Canal was 24·4 feet in 1870; in 1890 ships drawing 25·4 feet could make the passage; and during the following 24 years the increase has been at the average rate of about 1 foot every six years, thus bringing the maximum draught authorized to 29 feet.

The scheme of improvement adopted by the Company on the recommendation of the International Consultative Committee of Works, the British representatives on which are Sir William Matthews and Mr. Anthony Lister, is a comprehensive one, and the details suggest that it will meet the needs of the big ship.

A 40 feet Channel.—The declared policy of the Canal Company in regard to the deepening of the Canal is to offer a slightly greater depth of water than that available in ports east of Suez. It is claimed that, with the exception of Sydney, there is no eastern port which at low tide has a greater depth of water than that now provided in the Canal throughout the full length of nearly 105 miles. In any case the work in hand should meet the needs of any ship likely to be built for the eastern trade during the next few years.

When the Canal was opened in 1869, the width was 72 feet and the depth about 26 feet 2 inches. In June, 1913, the width at a depth of 32 feet 8 inches had been increased to a minimum of

147 feet 6 inches over a length of about 85 miles, and to a width of 325 feet over a distance of about 20 miles. The latest scheme makes provision for a depth of 40 feet throughout and for a widening up to 190 feet 8 inches in the south section, and the cutting of an appropriate number of sidings in the north and central sections, where a minimum width of 147 feet 6 inches is believed to be sufficient for the requirements of the immediate future.

The work of enlarging the capacity of the Canal presents no special difficulty on the engineering side. A good deal of sand is occasionally driven into the channel at Port Said during storms, but a remedy for this will be found in extension of the west breakwater by about 2,700 yards at a cost of over £6,000,000. The construction of this extension, which has been in hand for the past two years, is making satisfactory progress. The Suez Roads are being adequately dredged in accordance with an agreement between the Egyptian Government and the Company.

Almost up to the end of 1915 the works for extending the jetty to the west of Port Said, works of capital importance for the **protection of the entry** to the Canal, were pushed on uninterruptedly. In November, however, for want of hydraulic lime, the manufacture of artificial rocks for this jetty was interrupted. The submarine foundations in stone and rubble of the new jetty were, as a matter of fact, completed to a length of 2,500 metres; the protective blocks were laid for 1,040 metres, and cemented for over 800 metres. The protection of the Channel is thus secured, and there is no need for any apprehension as to its future.

For many years Indian time was in a state of chaotic confusion. What was called Madras or Railway time was kept on all the railways; and each great centre of population kept its own local time, which was not based on any common scientific principle and was divorced from the standards of all other countries. It was with a view to remedying this confusion that the Government of India took the matter up in 1904, and addressed to the Local Governments, and through them to all local bodies, a long letter which reviewed the situation and made suggestions for the future. The essential points in this letter are indicated below:

"In India we have already a standard time, which is very generally, though by no means universally, recognised. It is the Madras local time, which is kept on all railway and telegraph lines throughout India and which is 5h. 21m. 10s. in advance of Greenwich. Similarly, Rangoon local time is used upon the railways and telegraphs of Burma, and is 6h. 24m. 47s. ahead of Greenwich. But neither of these standards bears a simple and easily remembered relation to Greenwich time.

"The Government of India have several times been addressed by Scientific Societies, both in India and in England, and urged to fall into line with the rest of the civilised world. And now the Royal Society has once more returned to the attack. The Committee of that Society which advises the Government of India upon matters connected with its observatories, writes:—'The Committee think that a change from Madras time to that corresponding to a longitude exactly 5½ hours east of Greenwich would be an improvement upon the existing arrangements; but that for international scientific purposes the hourly zone system, making the time 5 hours in advance of Greenwich in the west, and 6 hours in advance in the east of India, would be preferable.'

"Now if India were connected with Europe by a continuous series of civilised nations with their continuous railway systems all of which had adopted the European hour-zone system, it would be imperative upon India to conform and to adopt the second suggestion. But as she is not, and as she is as much isolated by uncivilised States as Cape Colony is by the ocean, it is open to her to follow the example of that and some other similarly situated colonies and to adopt the first suggestion.

"It is believed that this will be the better solution. There are obvious objections to drawing an arbitrary line right across the richest and most populous portions of India, and so as to bisect all the main lines of communication, and keeping times differing by an hour on opposite sides of that line. India has become accustomed to a uniform standard in the Madras time of the railways; and the substitution for it of a double standard would appear to be a retrograde step; while it would, in all probability, be strongly opposed by the railway authorities. Moreover, it is very desirable that whatever system is adopted should be followed by all Europeans and Indians alike; and it is certain that the double standard would puzzle the latter greatly; while by emphasising the fact that railway differed from local time, it might postpone or even altogether prevent the acceptance of the former instead of the latter by people generally over a large part of India. The one great advantage which the second

possesses over the first alternative is, that under the former, the difference between local and standard time can never exceed half an hour; whereas under the latter it will even exceed an hour in the extreme cases of Karachi and Quetta. But this inconvenience is believed to be smaller than that of keeping two different times on the Indian system of railways and telegraphs.

"It is proposed, therefore, to put on all the railway and telegraph clocks in India by 8m. 50s. They would then represent a time 5½ hours faster than that of Greenwich, which would be known as **Indian Standard Time**; and the difference between standard and local time at the places mentioned below would be approximately as follows, the figures representing minutes, and E. and S. meaning that the standard time is in advance of or behind local time respectively:—Dibrugarh 51 S., Shillong 38 S., Calcutta 24 S., Allahabad 2 E., Madras 9 E., Lahore 33 E., Bombay 30 E., Peshawar 44 E., Karachi 62 E., Quetta 62 E.

"This standard time would be as much as 54 and 55 minutes behind local time at Mandalay and Rangoon, respectively; and since the railway system of Burma is not connected with that of India, and already keeps a time of its own, namely, Rangoon local time, it is not suggested that Indian Standard Time should be adopted in Burma. It is proposed, however, that instead of using Rangoon Standard Time as at present, which is 6h. 24m. 47s. in advance of Greenwich, a Burma Standard Time should be adopted on all the Burmese railways and telegraphs, which would be one hour in advance of Indian Standard Time, or 6½ hours ahead of Greenwich time, and would correspond with 97° 30' E. longitude. The change would bring Burma time into simple relation both with European and with Indian time, and would (among other things) simplify telegraphic communication with other countries.

"Standard time will thus have been fixed for railways and telegraphs for the whole of the Indian Empire. Its general adoption for all purposes, while eminently advisable, is a matter which must be left to the local community in each case."

It is difficult to recall, without a sense of bewilderment, the reception of this proposal by various local bodies. To read now the fears that were entertained if Standard Time was adopted is a study in the possibilities of human error. The Government scheme left local bodies to decide whether or not they would adopt it. Calcutta decided to retain its own local time, and to-day Calcutta time is still twenty-four minutes in advance of Standard Time. In Bombay the first reception of the proposal was hostile; but on reconsideration the Chamber of Commerce decided in favour of it and so did the Municipality. Subsequently the opposing element in the Municipality brought in a side resolution, by which the Municipal clocks were put at Bombay time which is thirty-nine minutes behind Standard Time. On the 1st January 1906 all the railway and telegraph clocks in India were put at Indian Standard Time; in Burma the Burma Standard Time became universal. Calcutta retains its former Calcutta time; but in Bombay local time is retained only in the clocks which are maintained by the Municipality and in the establishments of some orthodox Hindus. Elsewhere Standard Time is universal.

DEPARTMENT OF INDUSTRIES.

By a resolution of the Government of India, Department of Commerce and Industry, dated February 26, 1920, a Board of Industries and Munitions was constituted as a temporary organization designed to close the war commitments of the Indian Munitions Board, to take over from the Commerce and Industry Department and the Public Works Department certain items of work, and to undertake the initial work of industrial organisation, and in particular to frame detailed proposals for a new Department of Industries.

Proposals formulated by the Board of Industries and Munitions for the creation of a Department of the Government of India to deal with industrial questions have now received the approval of the Secretary of State for India, and accordingly a permanent Department of Industries was created in 1921. The new Department will deal for the present with the heads of business detailed in the resolution. It will be under the charge of the Hon. Sir Thomas Holland, Member of the Governor-General's Executive Council.

Concurrently with the creation of the permanent Department of Industries, the Board of Industries and Munitions ceased to exist. The work connected with the closing of the war commitments of the late Indian Munitions Board and the disposal of surplus stores on behalf of His Majesty's Government has been entrusted to a separate temporary organisation under an

officer designated Chief Controller (Surplus Stores) responsible to the Member-in-Charge of Industries.

On the retirement of Sir George Barnes in April 1921 Sir Thomas Holland became Member in charge of the portfolios of Industries and Commerce. This post he resigned later in the year on account of a difference of opinion with the Viceroy on the subject of what is called The Calcutta Munitions Case— a case where several individuals were under trial for fraud in connection with munitions contracts during the war. The case raised no little commotion at the time, not the least of the causes of this being the statement of the Advocate-General for the Crown that the Government knew the accused were guilty and could prove that they were guilty, but did not propose to proceed with the case. With the retirement of Sir Thomas Holland the activities connected with the Department, other than routine matters were suspended, as no successor had been appointed up to the close of the year and Mr. C. A. Innes, the Secretary of the Department, acted as Member. But although there has not been any official pronouncement on the subject it is unlikely that the grandiose scheme prepared by the Industries Commission will come to fruition. There is not the money available, and there are grave doubts whether these recommendations can fit in with the new constitution, which reverts Industries to the Provinces for administration.

Indian Orders.

The Star of India.

The Order of the Star of India was instituted by Queen Victoria in 1861, and enlarged in 1866, 1876, 1897, 1902, and 1911, and the dignity of Knight Grand Commander may be conferred on Princes or Chiefs of India, or upon British subjects for important and loyal service rendered to the Indian Empire; the second and third classes for services in the Indian Empire of not less than thirty years in the department of the Secretary of State for India. It consists of the Sovereign, a Grand Master (the Viceroy of India), the first class of forty-four Knights Grand Commanders (22 British and 22 Indian), the second class of one hundred Knights Commanders, and the third class of two hundred Companions, exclusive of Extra and Honorary Members, as well as certain additional Knights and Companions.

The Insignia are (i) the Collar of gold, composed of the lotus of India, of palm branches tied together in satire, of the united red and white rose, and in the centre an Imperial Crown; all enamelled in their proper colours and linked together by gold chains. (ii) The Star of a Knight Grand Commander is composed of rays of gold issuing from a centre, having thereon a star of five points in diamonds resting upon a light blue enamelled circular ribbon, tied at the ends and inscribed with the motto of the Order, *Heaven's Light our Guide*, also in diamonds. That of a Knight Commander is somewhat different, and is described below. (iii) The Badge, an onyx cameo having Her Majesty Queen Victoria's Royal Effigy thereon, set in a perforated and ornamental oval, containing the motto of the Order surmounted by a star of five points, all in diamonds. (iv) The Mantle of light blue satin lined with white, and fastened with a cordon of white silk with blue and silver tassels. On the left side a representation of the Star of the Order.

The ribbon of the Order (four inches wide for Knights Grand Commanders) is sky-blue, having a narrow white stripe towards either edge, and is worn from the right shoulder to the left side. A Knight Commander wears (a) around his neck a ribbon two inches in width, of the same colours and pattern as a Knight Grand Commander, and pendent therefrom a badge of a smaller size, (b) on his left breast a Star composed of rays of silver issuing from a gold centre, having thereon a silver star of five points resting upon a light blue enamelled circular ribbon, tied at the ends, inscribed with the motto of the Order in diamonds. A Companion wears from his left breast a badge of the same form as appointed for a Knight Commander, but of a smaller size pendent to a like ribbon of the breadth of one and a half inches. All insignia are returnable at death to the Central Chancery, or if the recipient was resident in India, to the Secretary of the Order at Calcutta.

Sovereign of the Order:—H. I. M. The King.

Grand Master of the Order:—His Excellency the Viceroy and Governor-General of India, the Right Honourable Lord Reading, P.C., G.C.B., G.M.S.I., G.M.I.E., G.C.V.O.

Honorary Knights Grand Commanders

(G. C. S. I.)

Prince Louis Albert D'Arenberg
Hon. General His Majesty Chowfa Smdetch Phra Paramendr Maha Vajiravudh Phra Mongkut Klao, G.C.B., G.C.V.O., King of Siam.

Extra Knights Grand Commanders

(G. C. S. I.)

H. M. the Queen Empress
H. R. H. The Duke of Connaught
H. R. H. The Prince of Wales

Knights Grand Commanders (G. C. S. I.)

H. H. the Gaekwar of Baroda
H. H. the Maharana of Udaipur
H. H. the Maharaja of Travancore
The Marquis of Lansdowne
H. H. the Maharaja of Jammu and Kashmir
H. H. the Maharaja of Gwalior
Lord Harris
Baron Macdonnell
Earl Curzon of Kedleston
Lord George Hamilton
H. H. the Raja of Cochin
Baron Amphil
Maharaja Sir Chandra Shumshere Jung Bahadur, Rana of Nepal.
H. H. the Maharaja of Orichha
H. H. the Maharaja of Mysore
Baron Hardinge of Penshurst
H. H. the Begum of Bhopal
Sir Steuart Bayley
Sir Dighton Probyn
Baron Sydenham
Sir Arthur Lawley
Sir John Hewett
H. H. the Maharaja of Bikaner
H. H. Maharao of Kotah
General Sir O'Moore Creagh
General Sir Edmund George Barrow
H. H. the Maharaja of Kapurthala
His Exalted Highness the Nizam of Hyderabad
H. H. the Aga Khan
H. H. the Nawab of Tonk
H. H. the Maharao ofutch
Baron Carmichael of Skirling
Baron Pentland
Baron Willington
H. E. Sir Charles Monro
H. H. Maharao Raja of Bundi
H. H. The Maharaja of Benares
H. H. The Maharaja of Patiala
Sir Arthur Arnold Barrett
H. H. The Nawab of Rampur
Lord Chelmsford
The Earl of Ronaldshay
H. H. The Maharaja Jam Sahib of Navanagar.
H. E. General Lord Rawlinson

Knights Commanders (K. C. S. I.)

Sir Joseph West Ridgway
Sir David Miller Barbour
Sir Phillip Perceval Hutchins
Sir Henry Edward Stokes
Sir Henry Mortimer Durand
H. H. Maharao of Sirohi
Sir Courtenay Peregrine Ilbert

OFFICERS OF THE ORDER.

Secretary, The Hon'ble Mr. J. P. Thompson,
 C.S.I., I.C.S.
Registrar, Col. The Hon. George A. C. Crichton,
 C.V.O.

The Most Eminent Order of the Indian Empire.

This Order, instituted by H. M. Queen Victoria, Empress of India, Jan. 1st, 1878, and extended and enlarged in 1886, 1887, 1892, 1897, and 1902 is conferred for services rendered to the Indian Empire, and consists of the Sovereign, a Grand Master, thirty-two Knights Grand Commanders (of whom the Grand Master is first and principal), ninety-two Knights Commanders, and an indefinite number of Companions (not exceeding, without special statute, 20 nominations in any one year); also Extra and Honorary Members over and above the vacancies caused by promotion to a higher class of the Order, as well as certain Additional Knights and Companions appointed by special statute Jan. 1st, 1909, commemorative of the 50th Anniversary of the assumption of Crown Govt. in India.

The Insignia are: (i) The COLLAR of gold formed of elephants, lotus flowers, peacocks in their pride, and Indian roses, in the centre the Imperial Crown, the whole linked together with

chains; (ii) The STAR of the Knight Grand Commander, comprised of five rays of silver, having a small ray of gold between each of them, the whole alternately plain and scaled, issuing from a gold centre, having thereon Her Majesty Queen Victoria's Royal Effigy, within a purple circle, edged and lettered gold, inscribed *Imperatrix Auspiciis*, and surmounted by an Imperial Crown gold; (iii) The BADGE, consisting of a rose, enamelled gules, barbed vert, and having in the centre Her Majesty Queen Victoria's Royal Effigy, within a purple circle, edged and lettered gold, inscribed *Imperatrix Auspiciis*, surmounted by an Imperial Crown, also gold; (iv) The MANTLE is of Imperial purple satin, lined with and fastened by a cordon of white silk, with purple silk and gold tassels attached. On the left side a representation of the Star of the Order.

A Knight Commander wears: (a) around his neck a ribbon two inches in width, of the same colour (purple) and pattern as a Knight Grand Commander, pendent therefrom a badge of smaller size; (b) on his left breast a star, similar to that of the first class, but the rays of which are all of silver.

The above mentioned Insignia are returned at death to the Central Chancery, or if the Knight was resident in India to the Secretary of the Order at Calcutta.

A Companion wears from the left breast a badge (not returnable at death) of the same form as appointed for a Knight Commander, but of smaller size, pendent to a like ribbon of the breadth of one and a half inches.

Sovereign of the Order:—The King, Emperor of India.

Grand Master of the Order:—Lord Reading.

Honorary Knights Grand Commanders (G. C. I. E.)

The ex-Emperor of Korea.
 Shaikh Sir Khazal Khan, Shaikh of Moham-
 merah and Dependencies.

Countess of Minto
Marchioness of Crewe
H. H. Begum of Bhopal
Lady Victoria Patricia Helena Ram-ay
Frances Charlotte, Lady Chelmsford
H. H. Maji Sahiba Girraj Kuar of Bharatpur
Countess of Reading.

THE KAISAR-I-HIND MEDAL.

This decoration was instituted in 1900, the preamble to the Royal Warrant—which was amended in 1901 and 1912—being as follows:—"Whereas We, taking into Our Royal consideration that there do not exist adequate means whereby We can reward important and useful services rendered to Us in Our Indian Empire in the advancement of the public interests of Our said Empire, and taking also into consideration the expediency of distinguishing such services by some mark of Our Royal favour: Now for the purpose of attaining an end so desirable as that of thus distinguishing such services

aforsaid, We have instituted and created, and by these presents for Us, Our Heirs and Successors, do institute and create a new Decoration." The decoration is styled "The Kaisar-i-Hind Medal for Public Service in India" and consists of two classes. The Medal is an oval shaped Badge or Decoration—in gold for the First Class and in silver for the Second Class—with the Royal Cypher on one side and on the reverse the words "Kaisar-i-Hind for Public Service in India;" it is suspended on the left breast by a dark blue ribbon.

Indian Names and Titles.

There is a bewildering multiplicity of Indian titles, made all the more difficult inasmuch as there is a difference of nomenclature between the titles of Hindus and Mahomedans. Some titles are hereditary and represent ruling chiefs or those nominally such (and of these there are no less than some 620, whilst of the titles themselves some 200 are known); others are personal honours conferred on individuals by the Indian Government, and even then sometimes made hereditary. Yet again, there are numerous complimentary titles, or specifications of office, expressed in Hindu phrases, of which we have occasionally supplied the interpretations. It must be added that though *caste* is often figuring in the names it has nothing whatever to do with the titles. Amir, Khan, Mir, Sultan, Sri, &c., are confusingly used as both titles and names.

The order of rank is thus given by Sir R. Lethbridge in "The Golden Book of India."

Hindu—Maharaja Bahadur, Maharaja, Raja Bahadur, Raja, Rai Bahadur, Rai Saheb, Rai.

Mohammedan—Nizam, Nawab Bahadur, Nawab, Khan Bahadur, Khan Saheb, Khan.

Parsia and Bene-Israelites—Khan Bahadur, Khan Saheb.

Afsur—a corruption of the English "officer."

Ahluwalia—name of a princely family resident at the village of Ahlu, near Lahore.

Akhundzada—son of a Head Officer.

Altijah (Sindhi)—of exalted rank.

Ali Raja—Sea King (Laccadives).

Amir (corruptly *Emir*)—a Mohammedan Chief often also a personal name.

Asaf—a Minister.

Baba—lit. "father;" a respectful "Mr." Irish "Your Honour."

Babu—strictly a 5th or still younger son of a Raja, but often used of any son younger than the heir, whilst it has also grown into a term of address—Esquire. There are, however, one or two Rajas whose sons are known respectively as—1st, Kunwar; 2nd, Diwan; 3rd, Thakur; 4th, Lal; 5th, Babu.

Bahadur—lit. "brave" or "warrior;" a title used by both Hindus and Mohammedans, often bestowed by Government; added to other titles it increases their honour, but alone it designates an inferior ruler.

Bakhshi—a revenue officer or magistrate.

Begum or *Begam*—the feminine of "Nawab" combined in Bhopal as "Nawab Begum."

Besar—apparently a large land-owner.

Dhonsle—name of a Maratha dynasty.

Bhup—title of the ruler of Cooh Behar.

Bhugti—name of a Baluch tribe.

Chhatrapati—one of sufficient dignity to have an umbrella carried over him.

Dada—lit. "grandfather" (paternal); any venerable person.

Dawla and *Dawlat*—State, also one in office.

Deb—a Brahminical priestly title; taken from the name of a divinity.

Dhiraj—"Lord of the Lands;" added to "Raja," &c., it means "paramount."

Diwan—a Vizier or other First Minister to a native Chief, either Hindu or Mohammedan, and equal in rank with "Sardar," under which see other equivalents. The term is also used of a Council of State.

Elaya Raja—title given to the heir of the Maharaja of Travancore.

Farzand (with defining words added)—"favorite" or "beloved."

Fateh—"victory."

Fath Jeang—"Victorious in Battle" (a title of the Nizam).

Gaekwar (sometimes *Guicovar*)—title with "Maharaja" added of the ruler of Baroda. It was once a caste name and means "cowherd," i.e., the protector of the sacred animal; but later on, in common with "Holkar" and "Sindhia," it came to be a dynastic appellation and consequently regarded as a title. Thus, a Prince becomes "Gaekwar" on succeeding to the estate of Baroda; "Holkar," to that of Indore and "Sindhia," to that of Gwalior.

Hafiz—guardian.

Haji—one who has made pilgrimage to Mecca.

Hiera Lal—"diamond ruby."

Holkar—see "Gaekwar."

Jah—a term denoting dignity.

Jam (Sindhi or Baluch)—Chief.

Kazi—(better written *Qazi*)—a Mohammedan magistrate.

Khan—originally the ruler of a small Mohammedan State, now a nearly empty title though prized. It is very frequently used as a name, especially by Afghans and Pathans.

Khawaja—a Persian word for "master," sometimes a name.

Kunwar or *Kumar*—the heir of a Raja.

Lal—a younger son of a Raja (strictly a 4th son, but see under "Babu").

Lokendra or *Lokindra*—"Protector of the World," title of the Chiefs of Dholpur and Dattia.

Mahant—a feudal title borne by the heads of a Hindu religious body.

Maharaja—the highest of hereditary rulers among the Hindus, or else a personal distinction conferred by Government. It has several variations as under "Raja," with the addition of *Maharaj Rana*; its feminine is *Maharani* (*maha*=great).

Malik—master, proprietor.

Mian—title of the son of a Rajput Nawab resembling the Scottish "Master."

Mir—a leader, an inferior title which, like "Khan," has grown into a name, especially used by descendants of the Chiefs of Sind.

Mirza—if prefixed, "Mr." or "Esquire."

Mong, Moung, or Maung (Arakanese)—leader.

Mowlvi or Maulvi—a learned man or teacher.

Mudakiyar or Mud-tiar—a personal proper name, but implying "steward of the lands."

Mumtaz-ud-Daula—distinguished in the State of Mulk, in the country.

Munshi—president, or presiding official.

Myowun—"Mr."

Nawab—originally a Viceroy under the Moghal Government, now the regular leading title of a Mohammedan Prince, corresponding to "Maharaja" of the Hindus.

Nazim—a ruler (not to be confused with following).

Nizam—the title of the ruler of Hyderabad, the one Mohammedan Prince superior to Nawab.

Nono (Thibetan)—the ruler of Spitta.

Pandi or Pundi—a learned man.

Peshkup—manager or agent.

Prince—term used in English courtesy for "Shahzada," but specially conferred in the case of "Prince of Arcot" (called also "Armini-Arcot").

Raja—a Hindu Prince of exalted rank, but inferior to "Maharaja." The feminine is *Rani* (Princess or Queen), and it has the variations *Raj, Rana, Rao, Rai, Rawal, Rawat, Raikwar, Raikbar, and Raikat*. The form *Rai* is common in Bengal, *Rao* in S. & W. India.

Raj Rajeshwar—King of Kings.

Risaldar—commander of a troop of horses.

Sahab—the Native Hindu term used to or of a European ("Mr. Smith" would be mentioned as "Smith Sahab," and his wife "Smith Mem-Sahab," but in addressing it would be "Saheb," fem. "Saheba," without the name); occasionally appended to a title in the same way as "Bahadur," but inferior (=master). The unusual combination "Nawab Sahab" implies a mixed population of Hindus and Mohammedans.

Sahibzada—son of a person of consequence.

Said, Sayid, Saiyid, Sidi, Syed, Syud—various forms for a title adopted by those who claim direct male descent from Mohammed's grandson Husain.

Sardar (corrupted to *Sirdar*)—a leading Government official, either civil or military, even a Grand Vizier. Nearly all the Punjab Barons bear this title. It and "Diwan" are like in value and used by both Hindus and Mohammedans. So, but Mohammedans only, are "Wali," "Sultan," "Amir," "Mir," "Mirza," "Mian," and "Khan."

Sawai—a Hindu title implying a slight distinction (lit. one-fourth better than others).

Saubwa (Burmese)—a Chief.

Shahzada—son of a King.

Shaikh or Sheikh (Arabic)—a Chief.

Shams-ul-Ulama—a Mohammedan title denoting "learned."

Shamshir-Jang—"Sword of Battle" (a title of the Maharaja of Travancore).

Sidi—a variation of "Said."

Sindhia—see under "Gaekwar."

Sri or Shri—lit. fortune, beauty: a Sanskrit term used by Hindus in speaking of a person much respected (never addressed to him; nearly—"Esquire"); used also of divinities. The two forms of spelling are occasioned by the intermediate sound of the *s* (that of *s* in the German *Stadt*).

Subadar—Governor of a province.

Sultan—like "Sardar."

Syed, Syud—more variations of "Said."

Talukdar—an Oudh landlord.

Talpur—the name of a dynasty in Sind.

Thakur—a Hindu term equivalent to "Bahadur," whether as affix or alone.

Tumandar—a Persian word denoting some office.

Umara—term implying the Nobles collectively.

Wali—like "Sardar." The Governor of Khe-lat is so termed, whilst the Chiefs of Cabul are both "Wali" and "Mir."

Zemindar or Zamindar—a landowner; orig. a Mohammedan collector of revenue.

Distinctive Badges.—An announcement was made at the Coronation Durbar in 1911, that a distinctive badge should be granted to present holders and future recipients of the titles of 'Diwan Bahadur', 'Sardar Bahadur', 'Khan Bahadur', 'Rai Bahadur', 'Rao Bahadur', 'Khan Sahib', 'Rai Sahib' and 'Rao Sahib'. Subsequently the following regulations in respect of these decorations were issued:—(1) The decoration to be worn by the holders of the titles above mentioned shall be a badge or medallion bearing the King's effigy crowned and the name of the title, both to be executed on a plaque or shield surrounded by a five-pointed star surmounted by the Imperial Crown, the plaque or shield being of silver gilt for the titles of Diwan, Sardar, Khan, Rai and Rao Bahadur, and of silver for the titles of Khan, Rai, and Rao Sahib. (2) The badge shall be worn suspended round the neck by a ribbon of one inch and a half in width, which for the titles of Diwan and Sardar Bahadur shall be light blue with a dark blue border, for the titles of Khan, Rai and Rao Bahadur light red with a dark red border, and for the titles of Khan, Rai and Rao Sahib dark blue with light blue border.

A Press Note issued in November, 1914, states:—The Government of India have recently had under consideration the question of the position in which **miniatures** of Indian titles should be worn, and have decided that they should be worn on the left breast fastened by a brooch, and not suspended round the neck by a ribbon as prescribed in the case of the Badge itself. When the miniatures are worn in conjunction with other decorations, they should be placed immediately after the Kaiser-i-Hind Medal.

Indian Distinguished Service Medal.—This medal was instituted on June 28th, 1907, by an Army Order published in Simla as a reward for both commissioned and non-commissioned officers of the regular and other forces in India. It bears on the obverse the bust of King Edward VII, and on the reverse a laurel wreath encircling the words **For Distinguished Service**. The

medal, $1\frac{1}{2}$ inches in diameter, is ordered to be worn immediately to the right of all war medals suspended by a red ribbon $1\frac{1}{2}$ in. wide, with blue edges $\frac{1}{2}$ in. wide. This medal may be conferred by the Viceroy of India.

Indian Order of Merit.—This reward of valour was instituted by the H. E. I. Co. in 1837, to reward personal bravery without any reference to length of service or good conduct. It is divided into three classes and is awarded to native officers and men for distinguished conduct in the field. On the advancement from one class to another the star is surrendered to the Government, and the superior class substituted, but in the event of the death of the recipient his relatives retain the decoration. The order carries with it an increase of one-third in the pay of the recipient, and in the event of his death the allowance is continued to his widow for three years. The First Class consists of a star of eight points, $1\frac{1}{2}$ in. in diameter, having in the centre a ground of dark blue enamel bearing crossed swords in gold, within a gold circle, and the inscription *Reward of Valour*, the whole being surmounted by two wreaths of laurel in gold. The Second Class star is of silver, with the wreaths of laurel in gold; and the Third Class entirely of silver. The decoration is suspended from a simple loop and bar from a dark-blue ribbon $1\frac{1}{2}$ in. in width with red edges, bearing a gold or silver buckle according to class.

Order of British India.—This order was instituted at the same time as the Order of Merit, to reward native commissioned officers for long and faithful service in the Indian Army. Since 1878, however, any person European or native, holding a commission in a native regiment, became eligible for admission to the Order without reference to creed or colour.

The First Class consists of a gold eight-pointed radiated star $1\frac{1}{2}$ in. in diameter. The centre is occupied by a lion statant guardant upon a ground of light-blue enamel, within a dark-blue band inscribed *Order of British India*, and encircled by two laurel wreaths of gold. A gold loop and ring are attached to the crown for suspension from a broad ornamental band $\frac{3}{4}$ in. in diameter, through which the ribbon, once blue, now red, is passed for suspension from the neck. The Second Class is $1\frac{1}{4}$ in. in diameter with dark-blue enamelled centre; there is no crown on this class, and the suspender is formed of an ornamental gold loop. The reverse is plain in both classes. The First Class carries with it the title *Sirdar Bahadur*, and an additional allowance of two rupees a day; and the Second the title of *Bahadur*, and an extra allowance of one rupee per day.

Indian Meritorious Service Medal.—This was instituted on July 27th, 1888, and on receipt of the medal the order states "a non-commissioned officer must surrender his *Long Service and Good Conduct medal*"; but on being promoted to a commission he may retain the M. S. medal, but the annuity attached to it will cease. On the obverse is the diademed bust of Queen Victoria facing left, with a veil falling over the crown behind, encircled by the legend *Victoria Kaisar-i-Hind*. On the reverse is a wreath of lotus leaves enclosing a wreath of palm tied at the base, having a star beneath; between the two wreaths is the inscription for meritorious service. Within the palm wreath is the word *India*. The medal, $1\frac{1}{2}$ in. in diameter, is suspended from a scroll by means of a red ribbon $1\frac{1}{2}$ in. wide. The medals issued during the reigns of Queen Victoria's successors bear on the obverse their bust in profile with the legend altered to *EDWARDVS* or *GEORGIVS*.

Domestic Servants.

The relationship of master to servant in India is a subject to which attention is frequently directed in the Press by complaints about the alleged deterioration of domestic servants and the hardships to which employers are subjected by the boycotting action of discharged servants. The remedy most commonly propounded for misbehaviour on the part of servants is registration with a view to checking the use of false testimonials, or "chits," and to enabling masters to obtain certain information as to the character of the persons they employ. This mode of procedure is of German origin, for the old Prussian Servants' Ordinances (*Gesindeordnung*) were supplemented in 1854 by a law, applying only to agricultural labourers and domestic servants, which punishes breach of contract, and since then various State laws dealing with domestic servants have been passed in Germany. The conditions are not, however, analogous for the servant keeping class in India is proportionately larger than in Europe, as also is the number of servants kept by each individual.

The first attempt in the East to deal with the problem by legislation was made in Ceylon. The act dealing with the registration of domestic servants in that Colony is comprised in Ordinance No. 28 of 1871. It extends to all classes of domestic servants, hired by the month or receiving monthly wages, and the word 'servant' means and includes head and under-servants, female servants, cooks, coachman, horsekeepers and house and garden coolies. The Act came into operation in 1871 and empowered the Governor to appoint for the whole of the Island or for any town or district, to which the Ordinance is made applicable, a registrar of domestic servants, who is to be under the general supervision and control of the Inspector-General of Police. A registry is kept by the registrar of all domestic servants employed within his town or district, and he has to enter therein the names of all the servants, the capacities in which they are employed at the time of such registration, the dates of their several engagements and such memorandum of their previous services or antecedents as they may desire to have recorded in the register. But the registrar must, previous to his entering all these details, satisfy himself as to the credibility of the statements made to him. Any person, who may not have been a domestic servant before, but who is desirous of entering domestic service, has to submit an application to the registrar, and if the registrar is satisfied that there are reasonable grounds to believe that the applicant is a fit and proper person to enter domestic service he shall enter his name in the register, recording what he has been able to learn respecting the person's antecedents together with the names of any persons who are willing to certify as to his respectability. If the applicant is unable to produce satisfactory or sufficient evidence as to his fitness for domestic service, the registrar may grant him "provisional" registration, to be thereafter converted into "confirmed" registration according to the result of his subsequent service. If the registrar is satisfied that the applicant is not a fit and proper person he should withhold registration altogether, but in such a case he must report his refusal to register to the Inspector-General of Police.

Every person whose name has been registered in the general registry is given a pocket register containing the full particulars of the record made in the general registry. No person can engage a servant who fails to produce his pocket register or whose pocket register does not record the termination of his last previous service, if any. On engaging a servant the master has to enter forthwith in the pocket register the date and capacity in which such servant is engaged and cause the servant to attend personally at the registrar's office to have such entry inserted in the general registry. Similarly, in case the master discharges a servant he must insert in the pocket register the date and cause of his discharge and the character of the servant. Provided that if for any reason he be unwilling to give the servant a character or to state the cause of his discharge he may decline to do so. But in such a case he must furnish to the registrar in writing his reasons for so refusing. If the servant on dismissal fails to produce his pocket register the master must notify that fact to the registrar. Whenever any fresh entry is made in the pocket register the servant is bound to attend the registrar's office to have such an entry recorded in the general registry. Every servant whose name is registered shall, if he subsequently enters service in any place not under the operation of the Ordinance, attend personally at the nearest police station on his entering or leaving such service and produce his pocket register to the principal officer of police at such station in order to enable the police officer to record the commencement or termination of the service. The police officer has then to communicate it to the registrar of the town or district in which such servant was originally registered.

Various penalties of fine as well as of imprisonment are imposed for violation of any of the acts required to be done or duties imposed by the Act on the various persons mentioned below. As respects masters if they fail to fulfil any of the duties imposed on them by the Act they expose themselves to a liability of their being fined to the extent of Rs. 20. Similarly a servant, who fails to fulfil any of the duties imposed on him by the Act is liable to pay a fine not exceeding Rs. 20. But in case he gives any false information to the registrar or to any other person on matters in which he is required by this Ordinance to give information, he is liable to a fine not exceeding Rs. 50 or to imprisonment, with or without hard labour, not exceeding 3 months. A fee of 25 cents is charged to the master on engaging a new servant, a like fee of 25 cents is charged to the servant on his provisional registration, or on registration being confirmed, or for registration of previous service or antecedents. But in case of loss or destruction of the pocket register the servant has to pay one rupee for the issue of a duplicate pocket register.

A similar Ordinance (No. 17 of 1914) has been introduced in the Straits Settlements, where its operation has been limited to such local areas as may be declared by the Governor in Council, and its application within such areas has been restricted to the class of householders who are expected to desire the benefit of the provisions

Stock Exchanges.

There are about 446 Share and Stock Brokers in Bombay. They carry on business in the Brokers' Hall, bought in 1899 from the funds of the **Share and Stock Brokers' Association** formed to facilitate the negotiations and the sale and purchase of Joint Stock securities promoted throughout the Presidency of Bombay. Their powers are defined by rules and regulations framed by the Board of Directors and approved by the general body of Brokers. The Board has the power to fix the rates in times of emergencies. The official address of the Secretary is Dalal Street, Fort, Bombay.

At first the admittance fee for a broker was Rs. 5 which was gradually raised to Rs. 7,000. The fee for the Broker's card has increased and it was recently sold by public auction for Rs. 21,800. The rules of the Association were revised in October 1916 and from the New Year the purchaser of shares has to pay the stamp and transfer fee instead of the seller. There are two classes of Exchange Brokers, Europeans and Indians, the latter being certified for recognition by the native Stock Exchange. Business in Government Paper and all other Trustees' Authorised Securities is carried on under the rules of the Bombay Stock Exchange, but in the street outside the hall.

In November 1917 a second Stock Exchange was opened in Bombay, with its headquarters in Apollo Street, known as the **Bombay Stock Exchange, Ltd.** This separate Exchange came to an end in 1921, when it was merged in the older body; it was revived in 1922 but complaint was made that it did very little, if any, business.

Committee of Enquiry.—In 1923 the Government of Bombay appointed a Committee to enquire into the constitution, government, customs, practices, rules, regulations and methods of business of the Native Share and Stock Brokers' Association of Bombay and to investigate any such complaints of the public and to make any such enquiries with reference to any of the aforesaid matters or any other matter appertaining to the aforesaid Association as the Committee may deem proper and thereafter with a view to protect the investing public against the interested or irregular control of business to formulate such definite proposals for the future constitution, control, direction and regulation of the aforesaid Association as the Committee may deem proper.

The Committee was constituted as follows:—

Sir Wilfrid Atlay	Chairman.
Sir Fazulbhoy Currimbhoy,	
Sir Purshotamdas Thakurdas	
Mr. R. Lindsay	Members.
Capt. E. V. Sassoon	
Mr. Bhulabhai J. Desai	
Mr. Perozeshah M. Dalal	
Mr. G. Davis, I.C.S.	
	Secretary.

For many years the **Calcutta Share Market** had its meeting place in various gullies in the business quarter and was under no control

except that of established market custom. In 1908 the **Calcutta Stock Exchange Association** was formed, a building was leased in New China Bazar Street now called Royal Exchange Place, a representative committee was formed, and the existing trade customs were focussed into rules drawn up for the conduct of business. Admittance as a member of the Stock Exchange is by vote of the committee, and the entrance fee is at present Rs. 500. The market custom differs very materially from that of most other Stock Exchanges since there are no settlement days, delivery is due the second day after the contract is passed and sales of securities are effected for the most part under blank transfers. Another difference in procedure as compared with the London Stock Exchange is that there are no "Jobbers" in the Calcutta market. The Dealers who take their place, more or less, are not compelled to quote a buyer's and a seller's rate and are themselves Brokers as well as dealers, calling upon the Banks and other clients and competing with Brokers.

There are about 150 members, besides outside brokers, the former consisting of European, Jewish, Marwari, and Bengalee firms. The Marwaris predominate. The volume of *bona fide* investment business is comparatively small and insufficient for the number of Brokers. The principal business transacted on the Calcutta Stock Exchange is connected with the shares in Jute Mills. Coal Companies, Tea Companies registered in India, Miscellaneous industrial concerns (such as Paper, Flour, Sugar), Railway and Transit Companies and Debentures, the latter comprising those of industrial concerns and Trustees' Investment Securities, namely, Municipal and Port Trust Debentures. When speculative operations are being actively engaged in, which frequently take the form of forward contracts for delivery in three months' time, the value of securities changing hands may aggregate as much as a crore of Rupees per month, but since the trade is not constant and one year differs very much from another, it would be difficult to estimate what the average annual turn-over would amount to. The association has an honorary secretary and is not at present affiliated to the Bengal Chamber of Commerce.

The **Madras Stock Exchange** situated No. 9 Broadway (in Tata Industrial Bank Buildings) consists of about 100 Members of which 25 are working Members. It was opened on 6th April 1920 and deals principally in Mill shares. Business is regulated by rules drawn up by the Directors. There is a Board of arbitration. There is an admittance membership card of Rs. 1,000 and an annual subscription of Rs. 100. The original 100 members were elected by the first Directors and each of the working members have deposited a security of Rs. 3,000 which is held by the Stock Exchange Committee.

Industrial Arts.

The ancient industrial arts of India formed two distinct groups. The first included those allied to, and dependent upon, architecture; the second comprise those applied to articles devoted to religious ritual; military weapons and trappings, domestic accessories; and to personal adornment.

The articles of the first group were intended for some fixed and definite position, and the style of their design and the character of their workmanship were dictated by that of the building with which they were incorporated. Those of the second group were movable, and the range of their design was less constricted and their workmanship was more varied. Examples of work in both groups are so numerous, and the arts comprise such a diversity of application, that only a cursory survey can be attempted within the limits of a short review. Although the design and treatment differ in the two groups, the materials used were often the same. These materials cover a very wide range but space only permits of reference to work applied to the four materials upon which the Indian craftsman's skill has been most extensively displayed. These are stone, wood, metal and textiles.

Before dealing separately with each of these materials a few words upon the principal Indian styles are necessary. The two distinctive styles are Hindu and Mahomedan. The former may be termed indigenous, dating as it does from remote antiquity; the latter was a variation of the great Arabian style, which was brought into India in the fourteenth century, and has since developed features essentially Indian in character. The art of both Hindus and Mahomedans is based upon religion and the requirements of religious ritual. The obvious expression of this is shown in the different motifs used for their ornament. In Hindu art all natural forms are accepted and employed for decorative purposes; but in that of the Mahomedans, nearly all natural forms are rejected and forbidden. The basis of Mahomedan decoration is therefore mainly geometrical. In each of them, racial characteristics are strikingly exhibited. The keynote of Hindu work is exuberance, imagination and poetry; that of Mahomedan, reticence, intellect and good taste. The Hindus are lavish, and often indiscriminating, in their employment of ornament; the Mahomedans use more restraint. In fact the two styles may be compared, without straining the analogy, to the Gothic and classic styles in Europe. In both styles the fecundity of ideas and invention in design are marvellous, and the craftsmanship often reaches a very high standard. Hindu art had been subjected throughout the ages to many foreign influences, but the artistic instincts of the people have proved so conservative that, whether these alien ideas came from the east or the west, they have been absorbed, and are now stamped with a definite Indian character. Recognition of this fact alone should relieve the anxiety of those critics who fear that the penetration of Western art and culture into India at the present time will eventually rob Indian art of its national character.

Stone Work.—Carved stone work is the principal form of decoration employed in Hindu temples. In variety and scope it ranges from the massive figures in the Buddhist and Brahminical Cave Temples, and the detached sculpture of the temples of Southern India, to the delicately incised reliefs and elaborately fretted ornament of the Jain temples at Mount Abu. A curious fact in relation to Hindu work is that priority of date appears to have no relation to artistic development. It is not possible to trace, as in the case of Greek, Roman and Mediaeval craftwork, the regular progressive steps from art in its primitive state to its culminating point and its subsequent decay. Styles in India seem to spring into existence fully developed; the earlier examples often exhibiting finer craftsmanship than those of a later date. There can be little doubt that stone carving in India was simply the application of the wood carvers' art to another material. The treatment of stone by the Hindu craftsmen, even in the constructive principles of their buildings, bears a closer resemblance to the practice of the wood-worker than to that of the stone mason. The earlier wooden examples from which the stone buildings and their decorations were derived have long since disappeared, but their influence is apparent. The keynote of Hindu design is rhythmic rather than symmetrical; that of their craftsmanship, vigour rather than refinement. In the carving of the human figure and of animals great power of expressing action is shown, and this spontaneous feeling is preserved despite the greatest elaboration and detail. The industry displayed is amazing, no amount of labour appears to have daunted the Hindu craftsmen in carrying out their huge and intricate schemes of decoration.

The stone carving on Mahomedan buildings, except where Hindu carvers have been allowed a free hand, is much more restrained than that on Hindu temples. The fact that geometrical forms were almost exclusively used, dictated lower relief and greater refinement in the carving; while the innate good taste of the designers prompted them to concentrate the ornament upon certain prominent features, where its effect was heightened by the simplicity of the rest of the building. The invention displayed in working out geometrical patterns for work screens, inlay, and other ornamental details appears to be inexhaustible; while wonderful decorative use has been made of Arabic and Persian lettering in panels and their framing. To obtain a rich effect the Hindus relied upon the play of light and shade upon broken surfaces, the Mahomedans to attain the same end used precious materials, veneering the surfaces of their buildings with polished marble which they decorated with patterns of mosaic composed of jade, agate, onyx and other costly stones. Although the art of inlaying and working in hard stones was of Italian origin, it proved to be one eminently suited to the genius of the Indian craftsman; and many wonderful examples of their skill in the form of book rests, tables, thrones, footstools, vases and sword handles are extant to show the height of proficiency they attained. The treatment of precious stones by Indian jewellers may here be referred

to. Sir George Birdwood states that "the Indian jeweller thinks of producing the sumptuous, imposing effect of dazzling variety of rich and brilliant colours and nothing of the purity of his gems." This is true in a general sense and "full many a gem of purest ray serene" was utterly ruined by crude cutting and pleasing. But although as early as the sixteenth and seventeenth centuries diamonds and precious stones from the Indian mines were taken to Europe to be cut, many of the finest jewels found their way back to the treasure houses of Indian princes.

Wood Work.—With a fine range of timbers suitable for the purpose, wood has played a great part in the construction and decoration of Indian buildings. Unfortunately, most of the ancient wood work has been destroyed by the action of the climate and the teeming insectivorous life of India; and that which escaped these enemies was wiped out by fire and the sword. It is therefore only possible to conjecture the height of artistic development these buildings and their decorations displayed by the copies in stone which have been preserved. Few if any examples of a date earlier than the sixteenth century are to be found. Many of these, and specimens of a later date to be seen in towns and cities throughout the country, are masterpieces of design and craftsmanship. The carved timber fronts and inner courtyards of houses in Ahmedabad, Nasik, and other parts of Western India are notable for their picturesque and beauty; the structural beams, the overhanging balconies, with their screens and supporting brackets, being carved in a manner which unites richness of effect with good taste and propriety. Of furniture, as the term is now understood, few examples were in use in India before Europeans introduced their own fashions. These were confined to small tables and stools, book rests, clothes chests and screens, the designs of which conformed somewhat closely to the architectural style of the period. Many of these were decorated with inlays of coloured woods, ivory and metal; while in some cases the wooden basis was entirely plated with copper, brass or silver. In Southern India, where close grained sandalwood is grown, jewel cases and boxes are enriched with carving executed with the attention to detail and the finish generally associated with the carving of ivory. Coloured lac was freely used to decorate many articles of furniture, especially those turned on the lathe; and rich colour effects were obtained in this, perhaps the most distinctive and typically Indian development of decoration as applied to woodwork.

Metal Work.—With the exception of weaving, the metal working industry employed and still employs the greatest number of artistic craftsmen in India. Copper and brass have always been the two metals most widely used for domestic purposes by Mahomedans and Hindus. The shapes of many of these humble vessels are among the most beautiful to be found in the country. They exhibit that sense of variety and touch of personality which are only given by the work of the human hand; and the shapes are those which grow naturally from the working of the material with the simplest

implements. In the technical treatment of brass and copper Indian craftsmen have shown a taste and skill unsurpassed by those of other nations, except in the department of fine casting. In this, and in the working of gold and silver, a higher standard of technical and constructive exactness has been reached by the metal workers of Europe and Japan. It may be taken as an axiom that the more beautiful the shape of an article is, and this especially applies to metal work, the less need exists for the decoration of its surface. It is equally true that the highest test of craftsmanship is the production of a perfect article without any decoration. The reason being that the slightest technical fault is apparent on a plain surface, but can be hidden or disguised of one which is covered with ornament. The goldsmiths and silversmiths of India were extremely skilful and industrious, but judged by this test their works often exhibit a lack of care and exactness in the structural portions and a completely satisfactory example of perfectly plain work from the hands of the gold and silversmiths of India is rarely to be met with. Much of the excessive and often inappropriate ornamentation of the articles that they produced owed its application as much to the necessity of hiding defective construction as it did to any purely decorative purpose. For many generations, ornaments of gold and silver were regarded in the light of portable wealth, a practice which naturally made for massiveness. These solid ornaments are most effective and picturesque; and, despite an enormous output of elaborate and delicate work from their hands, the most valuable contribution of the Indian metal workers to the sum total of man's artistic use of the precious metals will probably be found to lie in a certain barbaric note which distinguishes these pieces—a note not present in the craft work of other countries. In the design of Hindu gold and silver ornaments, religious symbols have been extensively used. The ornaments which bedeck the early sculptured figures, and those depicted in the paintings at the Cave Temples of Ajanta are precisely the same in design and use as similar articles made at the present time, thus affording a striking evidence of the inherent conservatism of the Hindu people and its effect upon an industrial art that makes a closer personal appeal than any other.

Textiles.—The textile industry is the widest in extent in India and is that in which her craftsmen have shown their highest achievements. Other countries, east and west of India have produced work equal, if not superior, in stone, wood, and metal; but none has ever matched that of her weavers in cotton and wool, or excelled them in the weaving of silken fabrics. Some of the products of the looms of Bengal are marvels of technical skill and perfect taste, while the plum bloom quality of the old Cashmere shawls is an artistic achievement which places them in a class by themselves. Weaving being essentially a process of repetition, was the first to which machinery was applied, and modern science has brought power loom weaving to such a state of perfection that filaments of a substance finer even than those of Dacca, which astonished our ancestors, are now produced in the mills of Lancashire. But

for beauty of surface and variety of texture, no machine-made fabrics have ever equalled the finest handwork of the ancient weavers of India. Many of the most beautiful varieties of Indian textile work have disappeared, killed by the competition of the power loom; and it is to be feared that under modern conditions they are never likely to be revived. In other branches of art as applied to textiles India does not hold so pre-eminent a position as in that of weaving. The printed silks and calicoes of the seventeenth and eighteenth centuries deservedly held a high place in the estimation of Western nations, whose craftsmen learnt many valuable lessons from the technical skill, and artistic taste they display. In embroidery and fine needlework the West and the Far East have more than held their own, while nothing approaching the tapestries made in Europe in the middle ages has been produced in India. The nearest approach to these is in carpets and rugs. This art was introduced from Persia; but Indian craftsmen have never succeeded in equalling the finest work of their instructors either in colour or design.

Modern Conditions.—In the foregoing sketch of the ancient industrial art of India, as applied to the four principal materials employed, only a general indication of its more striking characteristics has been possible. A volume would be required to give a detailed description of any one of them, and would leave many other minor arts to be considered. All these branches of art came into existence, were developed and flourished in India when social and economic conditions were vastly different from those of the present day. Like similar artistic crafts carried on in Europe up to the end of the eighteenth century, they were executed by hand labour. The processes involved had not been discovered by scientific inquiry, such as is now understood by the phrase, but were the outcome of generations of slowly built up experience. We now come to the effect upon them of the changed conditions which have revolutionised industrial art in Europe during the last century.

The invention of the steam engine, and the application of mechanical power and scientific research to industry in Europe, mark the dividing line between ancient and modern industrial art. Not only on its technical side is this so, but the effect of these changes has been to alter the character of the work itself and the spirit which animated the craftsmen. In place of the ancient ideal of variety in design and treatment, which meant a limited output, the modern one of uniformity and unlimited output has been substituted. The capitalist has displaced the master craftsman; the organised factory, the small workshop; specialisation and division of labour have taken the place of general proficiency among the artisans; the function of the designer has been separated from that of the craftsman; local markets have been extended to serve the whole world; and the skilled handicraftsman has, in a great measure, become a machine-minder. It took about one hundred years of gradual change for the craftsmen of Europe fully to adjust themselves to these altered conditions; and during the greater portion of that period India protected by the difficulties of transport, con-

tinued its immemorial practice. Fifty years ago this protective barrier was removed by the opening of the Suez Canal, and the handicraftsmen of India have since been struggling to avoid the same fate which overtook those of Europe half a century before. With less time to adapt themselves to the changed conditions the Indian craftsmen have had to meet the competition of European rivals already fully equipped with new and unknown weapons. Even before this period of intense competition, observers interested in Indian craftwork had noticed evidences of its deterioration. The falling off, both in design and workmanship, was attributed to the conservative practice of the craftsmen; to the gradual loss of foreign markets, and to the long period of internal disorder which had deprived them of both the patronage of the rulers of an earlier age and the stimulating contact with foreign craftsmen who had previously been attracted to the splendid courts at Delhi and Agra. During the same period, an even greater degradation in design had overtaken the craftwork of Europe. This was due to entirely different causes, namely, to the introduction of machinery. Attention had been so concentrated upon speedy production, mechanical accuracy and commercial organisation that beauty of design had been almost entirely neglected. This was so forcibly demonstrated at the International Exhibition of 1851 that efforts were at once made to bring art and industry together once more. Schools of Art and Museums were founded throughout England and the same system was copied in a tentative and timid fashion in India. The function of these institutions was accurately estimated in England, where the artistic industries were already highly organised and were commercially successful, and whose products were to be found in every market of the world. Their business was to assist these industries by training a body of efficient designers capable of furnishing the factories with suitable designs, new or old, and in any style, to satisfy the requirements of customers in any country. It was never supposed for an instant that a School of Art could lead an industry. In India their function was as completely misunderstood as were the causes of the depression in Indian craftwork. The schools were not only expected to lead the industries which were living, but to revive those which were moribund, and resurrect those which were dead. Archaeologists ignoring the economic factor vainly conceived and propounded the idea that the salvation of the industrial arts was to be found in strict adherence to ancient methods of work and a repetition of the old patterns at a time when the home markets of the craftsmen were swamped with cheap machine-made goods printed in the old pattern which had been copied and adopted by European designers. In India, the cart was put before the horse, and, instead of first reorganising the artistic crafts, and placing them on a commercial basis that would have afforded them a decent chance of meeting Western competition, and then instituting art and craft schools in every industrial centre to assist them, an entirely inadequate number of art schools was founded and the crafts were left to shift for themselves. The Japanese have demonstrated the possibility of transforming a nation of

individual artistic craftsmen into one of co-operative industrial craftsmen; and however much one may regret the necessity, the only road to the economic revival of craftwork in India is that which has already been taken by Western nations and Japan. That work of the same quality, or even of a similar character to that which was done in the past, will be produced under the new system cannot be expected. Both in Europe and Japan the change has been followed by deterioration in design, and India cannot hope to escape where others have suffered. But the artistic instinct and a love of beautiful things are widespread and firmly rooted in the Indian character. The craftsmen possess powers of invention in design equal to that of any other people, but these have been suppressed for a century by the depressing conditions with which they have had to contend. If the artistic industries can be established upon a basis in conformity with, and not in antagonism to, modern economic conditions, the artistic instinct and technical skill of Indian craftsmen will revive and India

will regain the honourable place she once held in the world of art. In the report of the Indian Industrial Commission the need for some State-aided system of industrial and commercial organisation of the industrial arts with an expanded scheme of technical and artistic instruction for the craftsman has been recognised; and valuable suggestions were made by experts who gave their evidence when the Commission visited the different Provinces. The success of the scheme recommended by the Commission will depend entirely upon the energy with which it is applied, and the practical knowledge and the assistance required by each of the different crafts on the part of those who control it. If, in addition, the same financial assistance and encouragement are given by the Imperial and Local Governments to the Indian craftsmen that have been bestowed by their own Government upon the art workers of Japan, industrial art in India will quickly emerge from the cloud of depression, which has hung over it for a century past, into the sunlight of prosperity.

The Fisheries of India.

The fisheries of India, potentially rich, as yet yield a mere fraction of what they could were they exploited in a fashion comparable with those of Europe, North America or Japan. The fishing industry, particularly the marine section, has certainly expanded considerably within the last 50 years concurrently with improvement in the methods of transport and increase in demand for fish, cured as well as fresh, from the growing populations of the great cities within reach of the seaboard. The caste system, however, exerts a blighting influence on progress; fishing and the fish trade are universally relegated to low caste men who alike from their want of education, the isolation caused by their work and caste, and their extreme conservatism, are among the most ignorant, suspicious and prejudiced of the population, extremely averse from amending the methods of their forefathers and almost universally without the financial resources requisite to the adoption of new methods, even when convinced of their value. Higher caste capitalists have hitherto fought shy of association with the low caste fishermen, and, except in the case of joint stock companies to engage in large operations on new lines, these capitalists cannot be counted upon to assist in the development of Indian fisheries. As in Japan, it appears that the general conditions of the industry are such that the initiative must necessarily be taken by Government in the uplift and education of the fishing community and in the introduction and testing of new and improved apparatus and methods.

The first local Government to lead the way was that of Madras, which in 1905 initiated an investigation of the industry, both marine and fresh-water, appointing Sir F. A. Nicholson to supervise operations. Bengal followed suit in 1906, and from these beginnings have sprung the local Fisheries Departments of Madras, Bengal, and Behar and Orissa. Bombay, the remaining seaboard province, has comparatively small fresh-water interests compared with Madras and Bengal, and as it happens that her marine fisheries are favoured with good harbours and the most enterprising race of sea-fishermen in India, there was less urgent need for State help in the industry. Hence fisheries there are only now becoming the subject of Government solicitude, their care being apportioned to the newly created Department of Industries.

Madras.

The Madras coast line of 1,750 miles is margined by a shallow-water area within the 100 fathom line of 40,000 square miles; outside of a mere fringe inshore, this vast expanse of fishable water lies idle and unproductive. The surf-swept East coast is singularly deficient in harbours whereon fishing fleets can be based, and so from Ganjam to Negapatam, the unsinkable catamaran, composed of logs tied side by side, is the only possible sea-going fishing craft. Its limitations circumscribe the fishing power of its owners and consequently these men are poor, and the produce of their best efforts meagre compared with what it would be if better

and larger boats were available and possible. The West coast is more favoured. From September till April, weather conditions are good enough to permit even dugout canoes to fish daily. The people of this coast are fond of fish and, as no difficulty is found in beaching canoes and boats throughout this season, the fishing population is a large one. The 1911 Census gave 75,013 adults as subsisting on fishing industries in Malabar and S. Kanara, a small number after all, considering the immense wealth of these seas. The chief fishes are sardines, mackerel, catfishes and jewfishes (*kora* or *gol*); the two first overshadow all others. So greatly in excess of food requirements are the catches of sardines that every year large quantities are turned into oil and manure. Fishing outside the 5-fathom line is little in evidence, save by Bombay boats (Ratnagiri) which are engaged in drift netting for bonito, seer and other medium-sized fishes. These strangers are enterprising fishers and bring large catches into Malpe and Mangalore and other convenient centres; the material is largely cured for export.

Fish-curing is practised extensively everywhere on the Madras coasts; its present success is due primarily to Dr. Francis Day who, after an investigation during 1869-71 of the fisheries of the whole of India, pressed for the grant to fishermen of duty-free salt for curing purposes within fenced enclosures. He advocated much else, but the time was not ripe and the salt concession was the sole tangible result of his long and honourable efforts. His salt suggestions were accepted by the Madras Government, and from 1882 a gradually increasing number of yards or bonded enclosures were opened at which salt is issued free of duty and often at rates below the local cost of the salt to Government. At present about 140 of such yards are scattered along the coast and over 50,000 tons of wet fish are annually cured therein.

The **pearl and chank fisheries** in Palk Bay and the Gulf of Mannar are Government monopolies. The former are now at little value and no remedial measures seem possible; the latter have been brought to a high state of efficiency and bring in substantial returns; the net profit for 1920-21 was Rs. 37,196. Chanks or conches (*Turbinella pium*) are handsome porcelain—white shells of great thickness and considerable size, much in demand in Bengal, particularly Dacca, where the industry centres, for manufacture into bangles.

The **inland fisheries** of Madras compare unfavourably with those of Bengal. Many of the rivers dry up in the hot season and few of the many thousands of irrigation tanks throughout the province hold water for more than 6 to 9 months. As a consequence inland fisheries are badly organized and few men devote themselves to fishing as their sole, or even main, occupation. The custom is to neglect or ignore the fishery value of these streams and tanks so long as they are full of water; only when the streams shrink to pools and the tanks to puddles do the owners or lessees of the fishing rights turn out to catch fish. The result is a dearth of fish throughout the greater part of the year,

a glut for a few days, and often much waste in consequence. The chief fresh-water fishes of economic importance are the murrel, notable for its virtue of living for considerable period out of water, various carps, and catfishes, the hilsa (in East Coast rivers only), and the catla. In the Nilgiris, the Rainbow trout has been acclimatised and thrives well. The Government working in conjunction with the Nilgiri Game Association maintain a hatchery at Avalanche, where quantities of fry are hatched and reared for the replenishment of the streams of the plateau.

The Madras Department of Fisheries.—

As Government attention has been given in Madras over a longer period to the improvement of fisheries, and a larger staff concentrated upon the problems involved than elsewhere, this Presidency has now the proud position of knowing that her fisheries and collateral industries are better organized and more progressive than those in other provinces. The credit for the wonderful success which has been achieved and the still greater promise of the future, is due in large measure to the wise and cautious plans of Sir F. Nicholson, who from 1905 to 1918 had the guidance of affairs entrusted to him. In 1905 he was appointed on special duty to investigate existing conditions and future potentialities; in 1907, a permanent status was given by the creation of a Fisheries Bureau, and this in turn has developed into a separate Department of Government, now administered by Mr. James Hornell, F.L.S., as Director. The higher staff consists of a Marine Biologist, three Assistant Directors and a Cannery Manager. The first is charged primarily with the investigation of the life-histories of the principal food-fishes of the coast; the others have charge respectively of (a) the departmental fisheries (pearling, chanks *beche-de-mer*, etc.), and with experiments in the developments of inshore and deep-sea fishing methods; (b) the co-operative and socio-economic side of the Department's operations; (c) inland pisciculture, and (d) the experimental and demonstrational fish cannery at Chaliyam in South Malabar. Other officers have charge respectively of sections dealing with education and industrial work, which include a Training Institute for village teachers, fish-curing yards, and oil and guano factories.

The public fish-curing yards now under the control of the Salt and Abkari Department will eventually pass into the charge of the Fisheries Department; at present as a trial measure, 6 yards have been transferred and are now being operated directly under the latter Department, with a view to the introduction of better methods, and improved hygiene. Other newly opened yards are also being administered on model lines by the Department. Its activities are so varied and far reaching that it is difficult even to enumerate them in the space available, much less to give details. So far its most notable industrial successes have been the reform of manufacturing processes in the fish-oil trade, the creation of a fish-guano industry, the establishment of a fish cannery and the development of canned goods other than sardines, which alone had been canned previously in Malabar, and the opening of an oyster farm conducted under hygienic conditions. (For details see the *Bulletins of the Department*, issued from the Government Press,

Madras; twelve volumes have been issued to date). All this work has been carried on under serious handicap for want of suitable accommodation for the research staff; prior to the war proposals were elaborated for headquarters buildings in Madras comprising laboratories, experimental hatcheries, and a large public aquarium; postponed owing to war conditions these are again under discussion. In Madras the Department controls a small public aquarium, deservedly popular as the first and only one on the Asiatic mainland.

Fishing rights in the large irrigation tanks were transferred from Government to local authorities many years ago; these tanks are now being reacquired by Government in order that they may be restocked periodically by the Department: the results so far have shown a profit on the operations. To breed the necessary fry, three fish farms are in operation, and the construction of three more is in progress. In these the chief fish bred are the Gourami, obtained from Java, the Murrel and *Etroplus suratensis*, which has the excellent attribute of thriving and breeding as well in brackish as in fresh water; all three protect their eggs while developing a useful habit; both the *Gourami* and *Etroplus* are largely vegetarian in diet. A further activity is represented by the breeding of small fishes specially addicted to feed upon the aquatic larvae of mosquitoes. These are supplied in thousands to municipalities and other local authorities at a nominal price, for introduction into mosquito-haunted sheets of water; these anti-malarial operations have proved most successful in those places where the local authorities have given proper attention to the directions given. The educational work of the Department is becoming one of its most important branches whether it being specially training teachers for schools in fishing villages, in training men in the technology of curing, canning, and oil manufacture: in co-operative propaganda and in the supply of zoological specimens for the use of college classes and museums. The last named has filled a long-felt want and is contributing materially to the advancement of the study of zoology throughout India; there is now no need to obtain specimens from Europe.

The development of deep-sea fishing is engaging the attention of Government; splendid trawl grounds are indicated off Cape Comorin extending over an area of some 4,000 square miles; other promising areas are known elsewhere, but so far the limiting factors are the lack of cold storage accommodation at any port in the Presidency, and the want of a deep-water harbour in the south, where steam-trawlers can discharge direct into store.

Welfare Work.—A remarkable feature in the work of the Madras Fisheries Department is the energy which it devotes to the improvement of the condition of the fisherfolk. On Sir Frederick Nicholson's initiative the department has always recognized the duty of spreading among them education and the habits of thrift, temperance and co-operation. The work has been specially successful on the west coast. The number of fishermen's co-operative societies last year had risen to 65. The paid-up capital of these societies amounted to over three-quarters

of a lakh of rupees ; over 2 lakhs were disbursed by them in loans. These societies it is reported worked satisfactorily, allowance being made for the inexperience and illiteracy of the members. But the formation and working of co-operative societies are not the only social activity among these fishermen. There is a vigorous temperance society at Mangalore. The Collector of South Kanara has granted sites for the construction of village halls for the fishermen in two villages and the fishermen have themselves collected Rs. 3,000 for the building. In another village, Kizhur, the fishermen have already completed a building in which they hold meetings while an elementary school carries on its work in the same building. In Madras itself at Nadukupam a temperance organisation has got to work with the assistance of the Fisheries Department. To promote the education of fishermen a training institution was opened in the middle of 1918 at Calcutta to train teachers to work in elementary schools for the fisherfolk. The pupil teachers under training are familiarized with the work carried on in the fishery stations at Tanur and Challyam. They are given practical instructions in fishing, a boat having been purchased for the purpose. By the end of 1920 29 schools for the fisherfolk were being maintained by the department on the west coast with a total of 1,400 pupils. Nine of these were new schools started during the year by the department. In some places the villagers themselves started the schools and then handed them over to the department. In other places schools were opened by the department at the request of the fishermen. Local men are appointed as honorary managers of schools.

Bengal & Bihar & Orissa.

The fishing value of this extensive deltaic region lies primarily in the enormous area occupied by inland waters—rivers, creeks, jheels, and swamps, to say nothing of paddy fields and tanks. These swarm with fish and, as the Hindu population are free to a large extent from the aversion to a fish-diet which is widely prevalent among the better castes in the south, the demand for fish is enormous. Rice and fish are indeed the principal mainstays of the population and not less than 80 per cent. of the people consume fish as a regular item of diet. It is calculated that 1·6 per cent. of the population is engaged in fishing and its connected trades, a percentage that rises to 2·6 in the Presidency, Raj Shahl, and Dacca Divisions. 644,000 persons in Bengal subsist by fishing with 324,000 maintained by the sale of fish, and this in spite of the fact that fishing is not considered an honourable profession. As a fresh-water fisherman the Bengali is most ingenious, his traps and other devices exceedingly clever and effective—in many cases too effective—so eager is he for immediate profit, however meagre this may be. The greatest inland fishery is that of the hilsa (*Clupea uisha*) which annually migrates from the sea in innumerable multitudes to seek spawning grounds far up the branches of the Ganges and the other great rivers. Other valued and abundant fishes are the rohu (*Labeo rohita*) and the katla (*Calla calta*), prawns obtained everywhere. Of important fishes taken in the lower reaches of the rivers and in the great network of creeks spread

throughout the Sunderbans, the bekti (*Late calcarifer*) and the mullets are the most esteemed ; apart from these estuarine fish the most valuable sea-fishes are the mango-fishes (*Poly-nemus*), pomfrets and soles. The Sea-fisheries are as yet little exploited, the fishermen of Orissa, where alone coastal fishing is of any local importance, having no sea-craft save catamarans of inferior design and construction.

Following the inquiry begun in 1908 by Sir K. G. Gupta, an investigation of the steam trawl potentialities of the head of the Bay of Bengal was undertaken, the trawler *Golden Crown* being employed for the purpose. The results showed that there are extensive areas suitable for trawling and capable of yielding large quantities of high class fish. Much attention was devoted during these trawl cruises to the acquisition of increased knowledge of the marine fauna, the results being published in the Records and Memoirs of the Indian Museum. For various reasons, the chief perhaps being the hostility of vested interests, the lack of cold storage facilities and the loss of time involved by the trawler having to bring her catches to Calcutta instead of sending them by a swift tender, the experiment was financially a failure and was dropped. With ever-increasing demand for fish in Calcutta and the concurrent rise in prices, the prospects of remunerative steam-trawling are now much more promising and there seems a prospect of one or more steam trawling companies being floated in the immediate future. The trade is a difficult one to organize and without a rare combination of technical fishery knowledge and far sighted and comprehensive organization the danger run by the investing public will be considerable. Originally one Fisheries Department served the needs of the two provinces of Bengal and Bihar and Orissa. Separation was effected recently and at the present time fisheries in Bengal are administered temporarily by the Department of Agriculture, whereas in Bihar and Orissa, they form a section of the Department of Industries.

The Bengal Fisheries Department has of necessity a more limited scope for its activities than in the case of Madras. Practically no coastal minor industries exist, neither do the natural conditions lead us to suppose that any can be created without extreme difficulty, and in the absence of a great trawl industry which alone might be able to call into existence factories devoted to the utilization of fish by-products. Apart from this, much can be done by its officers for the uplift of the general fishing population with a view to free them from the tyranny of the mahajans (fish contractors and middlemen) and enable them to put more capital into their business and to conduct it co-operatively. This is necessarily extremely slow work, but the Department has made a beginning and once a few societies can be made successful, the news of the benefits conferred on the members will constitute the best possible form of propaganda. With the advent of the Reforms, fresh life has been infused into the Department and proposals are under consideration for a thorough-going reorganisation, having for its main object an intensive development of the great potentialities of the inland and estuarine

fisheries, which constitute the true fishery wealth of Bengal. Among these are included the establishment of a biological station where the life-histories of food fishes will be studied, the introduction of improved fishing methods and of new species of fish superior to the indigenous under certain conditions, the erection of an experimental cannery, etc.

Fresh-water murelles are used extensively at Dacca in the manufacture of cheap pearl buttons. The Dacca bangle factories carry on an important local industry of very ancient standing; their material is almost entirely obtained from the South Indian and Ceylon chank fisheries already alluded to.

Bombay.

Whereas Bengal's fisheries are at present confined principally to inland waters, those of Bombay are concerned, save in Sind, almost entirely with the exploitation of the wealth of the sea. Bombay is favoured with a coast line abounding with excellent harbours for fishing craft, a fair-weather season lasting for some seven months, and a fishing population more alive to their opportunities and more daring than those of the sister Presidencies. Bombay sea-fisheries are of very great importance financially as well as economically and, though there is less necessity for a special department to develop marine industries, there is ample scope for most useful work in improving curing methods, in introducing canning, and in the development of minor marine industries particularly those connected with the utilization of by-products. With this end in view the recent Director of Industries obtained sanction to include 'Fisheries' within his purview, and there are now two officers in the Department engaged upon fishery investigation and development. A steam trawler was bought for work in Bombay waters in 1920 and began work in May 1921 off Bombay. The experiment continued until March, 1922, and the trawler was subsequently sold to the Government of Burma. At the outset the results seemed promising, but the experiment as a whole showed that the cost of maintaining a trawler of the type used could not be met by sales of fish at current market rates. A beginning has been made in Bombay to instal cold storage, but for a trawler special facilities are needed also for rapid coaling, supplying ice and stores, and for unloading catches. More than this a change is needed in the medieval conditions under which the local fish market is conducted and there is much to be done in popularising little known species of edible fish, such as karel, palu, tambusa, and particularly the ray or skate which formed on the average 25 per cent. of the total catch but which is so little esteemed locally that it sold on the average at the rate of 100 lbs. for a rupee.

The more important sea-fish are pomfrets, soles and sea-perches among which are included the valuable Jew-fishes (*Sciaen* spp.) often attaining a very large size and notable as the chief source of "fish-maws" or "sounds," largely exported from Bombay for eventual manufacture into isinglass. The finest of Bombay fishing boats hail from the coast between Bassien and Surat. These boats are beautifully constructed, attain a considerable size,

and are capable of keeping the sea for weeks together. In the season they fish principally off the Kutch and Kathiawar coasts and in the mouth of the Gulf of Cambay. Their main method of fishing is by means of huge anchored stow nets, which are left down for several hours and hauled at the turn of the tide. The chief catches are bombil (Bombay ducks), pomfrets and Jew-fishes. The first named are dried in the sun after being strung through the mouth upon lines stretched between upright posts. South of Bombay the fishermen of Ratnagiri and Rajpur make use of another and lighter class of fishing boat, specially designed for use in drift-net fishing. Fine hauls of bonito scer (a large form of mackerel) and allied fishes are often made during the season from September to January and later of shark and rayfish. For the latter specially large and powerful nets are employed. For part of the fair season, when fishing is not usually remunerative, many of the larger Bombay fishing boats are employed as small coasters, a fact which shows how large they run in size.

In Sind considerable sea-fishing is carried on in the neighbourhood of Karachi chiefly for large and coarse fish, as shark, rays and Jew-fishes. The edible oyster trade of Karachi was once extensive, the creeks of the Indus producing a species of oyster superior to that found in Bombay and Madras backwaters and estuaries. Unrestricted exploitation of beds of limited extent inflicted great harm, and now, when various salutary restrictions are imposed, the beds are slow to respond. Occasionally large deposits of the window-pane oyster (*Placuna placenta*) are found in the Indus creeks and as these produce seed pearls in abundance, Government leased the beds to the highest bidder. The pearls are largely exported to China for use in medicine. Considerable fisheries exist in the River Indus, chiefly for the fish known as palla, which are annually leased out by Government for about Rs. 20,000.

In the Gulf of Kutch two pearl fisheries exist, one for the true pearl oyster, the other for the window-pane oyster. The former is carried on by His Highness the Maharaja of Jamnagar, the other partly by this Prince and partly by the administration of His Highness the Maharaja Gaekwar of Baroda. The latter industry owes its local existence to the enterprise of the Baroda Government which in 1905 obtained the services on deputation of Mr. J. Hornell, now Director of Fisheries in Madras, for the purpose of examining the marine potentialities of the Baroda territory in Kathiawar. One of the consequences was the discovery of large deposits of pearl-bearing window-pane oysters, until then unknown; of late years these beds have produced annually from Rs. 15,000 to Rs. 25,000 in revenue, perhaps the best example we have in India of the profitable nature of well-directed scientific enquiry into fishery problems. The Baroda Government, continuing their enlightened interest in the fishery developments, have had two officers trained in the Madras Fisheries Department and now employ them in development work on the Baroda coast.

Experiments in canning are now in progress at one of the chief fishing centres on the Southern Kathiawar coast and already promise considerable success particularly with regard to pomfrets.

Burma.

As with Bengal, the main fisheries of Burma are those in inland waters. From time immemorial the exclusive right of fishing in certain classes of inland waters has belonged to the Government, and this right has been perpetuated in various fishery enactments, the latest of which is the Burma Fisheries Act of 1905. Fishing is also carried on along the coast, but the sea fisheries absorb but a small portion of industry. Most of the fishermen labour in the stream and pools, which abound particularly in the Delta Districts. The right to work these fisheries, mentioned in the enactments alluded to above, is usually sold at auction, and productive inland waters of this kind often fetch very considerable sums. River fishing is largely carried on by means of nets, and generally yields revenue in the shape of licence fees for each net or other fishing implement used. Here and there along the coast are turtle banks which yield a profit to Government. In the extreme south the waters of the Morgul Archipelago afford a rich harvest of fish and prawns, mother-of-pearl shells and their substitutes, green snails and trochus, shark-fins, fish-maws, and beche-de-mer. Pearl diving apparatus was introduced by Australians with Filipino and Japanese divers in 1893. They worked mainly for the shell, it being impossible for them to keep an effective check on the divers as regards the pearls. After about five years, when the yield of shell had decreased, they all left. The industry was then carried on by the Burmese.

In 1918, the Burma Government deputed one of their civilians to study the methods of fishery development found successful in Madras. His report and recommendations are now before Government. From what is known of fishery conditions in Burma, the coastal fisheries appear more backward and undeveloped than anywhere else in India. This is due partly to the fact that the Burman is a poor sailor, and partly to the ease with which the population can earn a fair living by agriculture and other less hazardous and more profitable callings. The stress of population has not yet been felt in Burma. In 1922 the Government of Bombay purchased from the Government of Bombay the steam trawler with which experiments

(vide details of the Bombay fisheries) had been carried on off Bombay and Karachi.

The Punjab.

A Punjab Fisheries Department came into being as an experimental measure in 1912 and received the official sanction of Government as a regular department of the Punjab in April 1916. It operates under a Warden of Fisheries, under control of the Financial Commissioner. During the first three years the Department was almost entirely concerned with preliminary work, consisting largely of investigations and experiments in the Beas and Ravi Rivers.

These rivers were examined with a view to ascertain the indigenous species which inhabited them, their habits, spawning grounds and other data which would enable Government to frame regulations for their protection. The various fishing communities were interviewed and their views and statements carefully considered as to their rights in Government waters. Rules based upon the evidence when collated were subsequently drafted and approved by Government for the regulation of fishing in various districts, and are said to be working smoothly and satisfactorily. Those for each district take account of special local conditions, with a view both to conserve the fish supply and to secure a reasonable revenue to Government.

Trout culture flourishes in the hill streams, good sport being enjoyed by anglers in the Kulu Valley where operations were first initiated. The Kangra streams are now receiving attention, various consignments of ova having been sent there, successfully hatched out, and turned into suitable waters.

Travancore.

This State has affiliated Fisheries to the Department of Agriculture and with the help of two officers trained in Madras, the Department has already accomplished a notable amount of development work. Special attention has been given to the regulation of fisheries in backwaters to the establishment of co-operative societies among the fishing community and to the introduction of improved methods of sardine oil and guano production. Useful work has been done by one of the officers in elucidating the life-histories of the more valuable food fishes and prawns.

Coinage, Weights and Measures.

As the currency of India is based upon the rupee, statements with regard to money are generally expressed in rupees, nor has it been found possible in all cases to add a conversion into sterling. Down to about 1873 the gold value of the rupee (containing 165 grains of pure silver) was approximately equal to 2s., or one-tenth of a £, and for that period it is easy to convert rupees into sterling by striking off the final cipher (Rs. 1,000=£100). But after 1873, owing to the depreciation of silver as compared with gold throughout the world, there came a serious and progressive fall in the exchange, until at one time the gold value of the rupee dropped as low as 1s. In order to provide a remedy for the heavy loss caused to the Government of India in respect of its gold payments to be made in England, and also to relieve foreign trade and finance from the inconvenience due to constant and unforeseen fluctuations in exchange, it was resolved in 1893 to close the mints to the free coinage of silver, and thus force up the value of the rupee by restricting the circulation. The intention was to raise the exchange value of the rupee to 1s. 4d., and then introduce a gold standard at the rate of Rs. 15=£1. From 1899 onwards the value of the rupee has been maintained, with insignificant fluctuations, at the proposed rate of 1s. 4d., and consequently since that date three rupees have been equivalent to two rupees before 1873. For the intermediate period, between 1873 and 1899, it is manifestly impossible to adopt any fixed sterling value for a constantly changing rupee. But since 1899, if it is desired to convert rupees into sterling, not only must the final cipher be struck off (as before 1873), but also one-third must be subtracted from the result. Thus Rs. 1,000=£100— $\frac{1}{3}$ =(about) £67.

Notation.—Another matter in connection with the expression of money statements in terms of rupees requires to be explained. The method of numerical notation in India differs from that which prevails throughout Europe. Large numbers are not punctuated in hundreds of thousands and millions, but in lakhs and crores. A **lakh** is one hundred thousand (written out as 1,00,000), and a **crore** is one hundred lakhs or ten millions (written out as 1,00,00,000). Consequently, according to the exchange value of the rupee, a lakh of rupees (Rs. 1,00,000) may be read as the equivalent of £10,000 before 1873, and as the equivalent of (about) £6,667 after 1899, while a crore of rupees (Rs. 1,00,00,000) may similarly be read as the equivalent of £1,000,000 before 1873, and as the equivalent of (about) £666,667 after 1899.

Coinage.—Finally, it should be mentioned that the rupee is divided into 16 annas, a fraction commonly used for many purposes by both Indians and Europeans. The anna was formerly reckoned as $\frac{1}{4}$ d., it may now be considered as exactly corresponding to 1d. The anna is again sub-divided into 12 pies.

Weights.—The various systems of weights used in India combine uniformity of scale with immense variations in the weight of units. The scale used generally throughout Northern India, and less commonly in Madras and

Bombay, may be thus expressed one maund=40 seers, one seer=16 chittaks or 80 tolas. The actual weight of a seer varies greatly from district to district, and even from village to village, but in the standard system the tola is 180 grains Troy (the exact weight of the rupee), and the seer thus weighs 2·057 lb., and the maund 82·23 lb. The standard is used in official reports.

Retail.—For calculating retail prices, the universal custom in India is to express them in terms of seers to the rupee. Thus, when prices change what varies is not the amount of money to be paid for the same quantity, but the quantity to be obtained for the same amount of money. In other words, prices in India are quantity prices, not money prices. When the figure of quantity goes up, this of course means that the price has gone down, which is at first sight perplexing to an English reader. It may, however, be mentioned that quantity prices are not altogether unknown in England, especially at small shops, where pennyworths of many groceries can be bought. Eggs, likewise, are commonly sold at a varying number for the shilling. If it be desired to convert quantity prices from Indian into English denominations without having recourse to money prices (which would often be misleading), the following scale may be adopted—based upon the assumption that a seer is exactly 2 lb., and that the value of the rupee remains constant at 1s. 4d., 1 seer per rupee=(about) 3 lb. for 2s., 2 seers per rupee=(about) 6 lb. for 2s., and so on.

The name of the unit for square measurement in India generally is the *bigha*, which varies greatly in different parts of the country. But areas have been expressed in this work either in square miles or in acres.

Proposed reforms.—Indian weights and measures have never been settled upon an organised basis suitable for commerce and trade characteristic of the modern age. They vary from town to town and village to village in a way that could only work satisfactorily so long as the dealings of towns and villages were self-contained and before roads and railways opened up trade between one and the other. It is pointed out that in England a hogshead of wine contains 63 gallons and a hogshead of beer only 54 gallons; that a bushel of corn weighs 46 lbs. in Sunderland and 240 lbs. in Cornwall; that the English stone weight represents 14 lbs. in popular estimation, but only 5 lbs., if we are weighing glass, and eight for meat, but 6 lbs. for cheese. Similar instances are multiplied in India by at least as many times as India is bigger than England. If we take, for instance, the maund denomination of weight common all over India, we shall find that in a given city there are nearly as many maunds as there are articles to weigh. If we consider the maund as between district and district the state of affairs is worse. Thus in the United Provinces alone, the maund of sugar weighs 48½ seers in Cawnpore, 40 in Muttra, 72½ in Gorakhpur, 40 in Agra, 50 in Moradabad, 43½ in Saharanpur, 50 in Bareilly, 46 in Fyzabad, 48½ in Shahjehanpur, 51 in Goshangunge. The maund

varies throughout all India from the Bengal or railway maund of 82-2/7 lbs. to the Factory maund of 74 lbs. 10 oz. 11 drs., the Bombay maund of 28 lbs., which apparently answers to the Forest Department maund in use at the Fuel Depot, and the Madras maund, which some authorities estimate at 25 lbs. and others at 24 lbs. and so on.

Committees of Inquiry.—These are merely typical instances which are multiplied indefinitely. There are variations of every detail of weights and measures in every part of India. The losses to trade arising from the confusion and the trouble which this state of things causes are heavy. Municipal and commercial bodies are continually returning to the problem with a view to devising a practical scheme of reform. The Supreme and Provincial Governments have made various attempts during 40 years past to solve the problem of universal units of weights and measures and commerce and trade have agitated about the question for the past century. The Indian railways and Government departments adopted a standard tola (180 grains), seer (80 tolas) and maund (40 seers) and it was hoped that this would act as a successful "lead" which would gradually be followed by trade throughout the empire, but the expectation has not been realised.

The Government of India considered the whole question in consultation with the provincial Governments in 1890-1894 and various special steps have at different times been taken in different parts of India. The Government of Bombay appointed a committee in 1911 to make proposals for reform for the Bombay Presidency. Their final report has not been published, but they presented in 1912 an *ad interim* report which has been issued for public discussion. In brief, it points out the practical impossibility of proceeding by compulsory measures affecting the whole of India. The Committee stated that over the greater part of the Bombay Presidency a standard of weights and measures would be heartily welcome by the people. They thought that legislation compulsorily applied over large areas subject to many diverse conditions of trade and social life would not result in bringing about the desired reform so successfully as a "lead" supplied by local legislation based on practical experience. The want of coherence, *savoir faire*, or the means of co-operation among the people at large pointed to this conclusion. The Committee pointed out that a good example of the results that will follow a good lead is apparent in the East Khandesh District of the Presidency, where the District Officer, Mr. Simcox, gradually, during the course of three years, induced the people to adopt throughout the district uniform weights and measures, the unit of weight in this case being a tola of 180 grains. But the committee abstained from recommending that the same weights and measures should be adopted over the whole Presidency, preferring that a new system started in any area should be as nearly as possible similar to the best system already prevailing there.

Proposals from England.—Suggestions have been made by the British Weights and

Measures Association and the Decimal Association, respectively, at different times that British weights and measures and the decimal system should be introduced. Both proposals fail to meet the special requirements set forth by the Bombay Committee. Variations of them which have been put forward by different bodies in India in recent years are that the English pound weight and the English hundred-weight should be adopted as the unit of weight for all India. The argument in favour of the importation of an outside unit in this manner is that people in India will always associate with a given, familiar denomination of weight or measure the value they have been accustomed to consider in regard to it, but that if a new weight were introduced they would learn to use it in dealing with their neighbours, without the interference of anything resembling prejudice at what they might regard as an attempt to tamper with their old, traditional standards of dealing.

Committee of 1913.—The whole problem was again brought under special consideration by the Government of India in October, 1913, when the following committee was appointed to inquire into the entire subject anew:—

Mr. C. A. Silberrard (President).

Mr. A. Y. G. Campbell.

Mr. Rustomji Fardoonji.

This Committee reported, in August, 1915, in favour of a uniform system of weights to be adopted in India based on the 180 grain tola. The report says:—Of all such systems there is no doubt that the most widespread and best known is that known as the Bengal or Indian Railway weights. The introduction of this system involves a more or less considerable change of system in parts of the United Provinces (Gorakhpur, Bareilly and neighbouring areas), practically the whole of Madras, parts of the Punjab (rural portions of Amritsar and neighbouring districts), of Bombay (South Bombay, Bombay city and Gujarat), and the North West Frontier Province. Burma has at present a separate system of its own which the committee think it should be permitted to retain. The systems recommended are:—

FOR INDIA.

8 khaskhas	= 1 chawal
8 chawals	= 1 ratti
8 rattis	= 1 masha
12 mashes or 4 tanks	= 1 tola
5 tolas	= 1 chatak
16 chataks	= 1 seer
40 seers	= 1 maund

FOR BURMA.

2 small ywes	1 large ywe
4 large ywes	1 pe
2 pes	1 mu
5 pes or 2½ mus	1 mat
1 mat	1 ngamu
2 ngamus	1 tikal
100 tikals	1 pelktha or viss.

The tola is the tola of 180 grains, equal to the rupee weight. The viss has recently been fixed at 8·60 lbs. or 140 tolas.

Government Action.—The Government of India at first approved the principles of the Report and left the Provincial Governments to take action, but they passed more detailed orders in January, 1922. In these they again, for the present and subject to the restrictions imposed by the Government of India Act and the devolution rules, left it entirely to local Governments to take such action as they think advisable to standardise dry and liquid measures of capacity within their provinces. Similarly, they announced their decision not to adopt all-India standards of length or area.

As regards weights they decided in favour of the standard mentioned under the heading, "Weights", near the commencement of this article, this having been recommended by a majority of the Weights and Measures Committee and having received the unanimous support of the

Local Governments. At the same time the Government of India recognised that the question of the introduction of the desired change throughout India presents serious difficulties and for the present they accepted the resolution passed by the Council of State on the 23rd September, asking Government to declare themselves in favour of the ultimate adoption in India excluding Burma of a uniform system of weights based on the scale now in use on the railways—that is the standard already mentioned. They provisionally undertook to assist provincial legislation for standardisation and stated that "if subsequently, opinion develops strongly in favour of the Imperial standardisation of weights, the Government of India will be prepared to undertake such legislation, but at present they consider that any such step would be premature."

PROVING OF WILLS.

In British India if a person has been appointed executor of the will of a deceased person, it is always advisable to prove the will as early as possible. If the will is in a vernacular it has to be officially translated into English. A petition is then prepared praying for the grant of probate of the will. All the property left by the deceased has to be disclosed in a schedule to be annexed to the petition. The values of immoveable properties are usually assessed at 16½ years purchase on the nett Municipal assessment. For estate under Rs. 10,000 the probate duty payable is 2%; between Rs. 10,000 and Rs. 50,000 the duty payable is 2½%. Over 50,000 rupees the duty payable is 3%. In determining the amount of the value of the estate for the purposes of probate duty the following items are allowed to be deducted:—

1. Debts left by the deceased including mortgage encumbrances.

2. The amount of funeral expenses.
3. Property held by the deceased in trust and not beneficially or with general power to confer a beneficial interest.

The particulars of all these items have to be stated in a separate schedule. It is the practice of the High Court to send a copy of these schedules to the Revenue authorities and if the properties particularly immoveable properties have not been properly valued, the Revenue department require the petition to be amended accordingly. In certain cases the Court then requires citations to be published and served on such persons as the Court thinks are interested in the question of the grant of probate. If no objection is lodged by any person so interested within 14 days after the publication or service of citation and if the will is shown to have been properly executed and the petitioner entitled to probate, probate is ordered to be granted.

Calcutta Improvement Trust.

The Calcutta Improvement Trust was instituted by Government in January, 1912, with a view to making provision for the improvement and expansion of Calcutta by opening up congested areas, laying out or altering streets, providing open spaces for purposes of ventilation or recreation, demolishing or constructing buildings and re-housing the poorer and working classes displaced by the execution of improvement schemes.

The origin of the Calcutta Improvement Trust must, as in the case of the corresponding Bombay body, upon which the Calcutta Trust was to a large extent modelled, be looked for in a medical enquiry which was instituted into the sanitary condition of the town in 1896, owing to the outbreak of plague. It was estimated that the Trust might in the ensuing 30 years have to provide for the housing of 225,000 persons. The population of Calcutta proper, which includes all the most crowded areas, was 649,995 in 1891, and increased to 801,251, or by 25 per cent., by 1901. The corresponding figure according to the 1911 Census was 896,067 and this had increased by 1921 to 993,508.

The problem of expansion was difficult, because of the peculiar situation of Calcutta, which is shut in on one side by the Hooghly and on the other by the Salt Lakes.

Preliminary investigations continued for several years, so that it was only in 1910 that legislation was eventually introduced in the provincial legislature and the Trust instituted by it. The Bill provided for a scheme involving the expenditure of Rs. 8,22,00,000, and for special local taxation to this end. It also provided for the appointment of a whole time chairman of the board of trustees and the membership of the Trust was fixed at eleven.

The following formed the Board of Trustees in 1922-23: Mr. T. Emerson, C.I.E., I.C.S., M.L.C., Chairman; Mr. S. N. Mallik, M.A., B.L., M.L.C., Officiating Chairman of the Corporation of Calcutta (*ex-officio*); Raja Reshee Case Law, C.I.E., M.L.C., elected by the Corporation of Calcutta; Rai Nalini Nath Sett Bahadur, elected by the Ward Commissioners; Mr. W. H. Phelps, elected by the Commissioners appointed under Section 8 (2) of the Calcutta Municipal Act, 1899; Mr. A. H. Johnstone, B.A., B.E., A.M.I.C.E., elected by the Bengal Chamber of Commerce; Babu Amulyadon Addy, M.L.C., elected by the Bengal National Chamber of Commerce; Mr. J. H. de C. Ballardie, A.R.I.B.A., Rai Annoda Prosad Sarkar Bahadur and Rai Sahib Ram Doo Chokhany, appointed by the Local Government.

During the 11 years that it has now been at work, the Trust have decided, and partly or entirely carried through, several improvement schemes for opening up congested areas, laying out or widening streets and providing open spaces. It has spent over 6·8 crores of rupees on Capital Account, of which 1·24 crores has gone in Engineering Works and 5·56 crores on Land Acquisition: it has sold land to the value of 2·23 crores.

In Central Calcutta many highly insanitary *bustees* have been done away with and several roads of an improved type laid out, the most important of which is the Central Avenue, 100 ft. wide, which at present extends from Beadon Street to Bow Bazar Street, a distance of 1½

miles and which will shortly be extended towards the south to link up with Chowringhee, and to Shambazar on the north.

In the north of the City, a park and play ground have been completed and several wide roads driven through that highly congested area. The approaches to the City have also been adequately widened.

The Suburban Areas to the South and South-East of Calcutta required greater attention and extensive development schemes were undertaken. Several open spaces and squares have been made in various parts. Insanitary tanks requiring approximately 2 crores C.ft. of earth have been filled up. Russa Road which forms the southern approach to the town has been widened to 150 ft. for a length of one mile and 100 ft. for a length of another mile. It now gives a most pleasant drive from Chowringhee to Tollygunge. To improve the drainage of this area a 100 ft. wide East to West road, from Ballygunge Railway Station to Chetla Bridge, and for recreation an artificial lake of 167 bighas with adequate grounds are being made.

Lastly, for the housing of the displaced population the Trust has undertaken on a large scale the following schemes:—

In the early stages three blocks of chawls were built in Wards Institution Street for persons of the poorer classes. It was found, however, that the persons displaced preferred to take their compensation and migrate to some place where they could erect *bustis* of their own, the class of structures they were accustomed to live in. These chawls were then filled with persons of limited means, *e.g.*, School Masters, poor Students, Clerks and persons of the artisan class. As many as 1,200 people are housed in these chawls, these buildings, including land, cost Rs. 2,44,368 and are let at very low rents—ground floor rooms at Rs. 5 per mensem and top floor rooms on Rs. 6 per mensem each room measuring 12'X12' with a 4 ft. verandah in front opening on to a central passage 7 ft. wide.

As these chawls failed to attract the people for whom they were meant, the Board next tried an experiment in providing sites for *bustees*. Two sites with a lettable area of 16 bighas were acquired within the area of Maniktola Municipality, but they failed to attract because they were out of the way and were expensive. A scheme is now being carried out at Palkpara, in Cossipore-Chittpore Municipality. Here 36 bighas of land have been acquired and are being laid out in building sites for sale to middle class people who will build their own houses. A large park is also under construction in this area.

The Trust has also built a cluster of houses in Kerbala Tank Lane, off Beadon Street, to house temporarily persons whose residences have been acquired, while they are building new houses.

Finally, the Trust has under construction in Bow Street a number of blocks of one, two and three roomed tenements capable of accommodating 500 people. These are intended for Anglo-Indians, who have been displaced in the area to the East of Bontinck Street.

The single roomed tenements are just ready and have been greatly in demand by the people for whom they are intended.

BOMBAY IMPROVEMENT TRUST.

Bombay is an island twelve miles long, but very narrow and containing only 22 square miles altogether, but in the city, occupying little more than half the island, there lives a population enumerated at 1,75,914 at the Census in 1921, and actually totalling at the present time, according to conservative estimates, over a million and a quarter. Bombay is, in point of population, the second city of the British Empire. Seventy-six per cent. of its people live in one-roomed tenements. A terrible visitation of plague in 1896 harshly directed attention to the insanitary conditions arising from overcrowding and as it was recognised that the task of effecting the required improvements was too great for the Municipality, a special body, termed the Trustees for the Improvement of the City of Bombay, was appointed. It consists of 14 members, of whom four are elected by the Municipality and one each by the Chamber of Commerce, the Millowners' Association and the Port Trust, and the balance nominated by Government, or sit *ex-officio* as officers of Government. The Board is presided over by a whole-time chairman (who has hitherto always been either a covenanted civilian or an officer of the Public Works Department) and he is also head of the executive. The present chairman and members of the Trust are as follows:—

Chairman—

Mr. E. G. Turner, I.C.S., J.P.

Ex-officio Trustees—

Major-Genl. J. H. K. Stewart, C.B., D.S.O.
Officer Commanding Bombay District.

Mr. J. P. Brander, I.C.S., Collector of Bombay.

Mr. H. B. Clayton, M.A., J.P., Municipal Commissioner for the City of Bombay.

Elected by the Corporation—

Dr. K. E. Dadachanji, J.P.

Mr. V. A. Dabholkar, O.B.E., J.P.

Mr. Naoroji M. Dumasia, J. P.

The Hon. Mr. P. C. Sethna, O.B.E., J.P.

Elected by the Chamber of Commerce—

Mr. Harry T. Gorrie, J.P.

Elected by the Port Trustees—

Mr. P. R. Cadell, C.S.I., C.I.E., I.C.S.

Elected by the Millowners' Association—

Mr. S. D. Saklatvala.

Nominated by Government—

Sir Lawless Hepper, Kt., J.P.

Mr. Mirza Ali Mahomedkhan, M.A., LL.B., J.P.

Dr. S. S. Bottlowala.

The specific duties of the Trust are to construct new and widen old streets, open out crowded localities, reclaim lands from the sea to provide room for expansion, and construct sanitary dwellings for the poor (including the Presidency Police) and also at the cost of employers of labour for the labourers employed.

Bombay city grew on haphazard lines houses being added as population poured in with the growth of trade and without any regard to town planning or the sanitary requirements of a great town. The price of land was always comparatively high, owing to the small area of the island, and while the builder had only one object in view, namely, to collect as many rent paying tenants as possible on the smallest possible piece of land, there were no proper restraints to compel him to observe the most ordinary rules of hygiene. The result was the erection of great houses; sometimes five and six storeys high, constituting mere nests of rooms. There was no adequate restriction as to the height of these chawls, or the provision of surrounding open space, so that the elementary rules as to the admission of light and air went unobserved and the house builder invariably erected a building extending right up to the margins of his site. Consequently, great houses accommodating from a few hundred to as many as four thousand tenants were built with no more than two or three feet between any two of them and with hundreds of rooms having no opening at all into the outer air.

The Trust has practically reconstructed large areas on modern sanitary lines, but the old municipal by-laws having until within the past year remained quite inadequate for the due control of private building operations by the Municipality, the Trust have spent millions sterling of public money in sweeping away abuses, while unscrupulous landlords, still unchecked, added in the same old manner to the insanitary conditions of the place. It is hoped that the amendment of the by-laws, as recently settled, will overcome this evil of bad building.

Certain Government and Municipal lands were vested in the Trust, the usufruct of which it enjoys, and the Trust receives a contribution from municipal revenues amounting to a definite share in the general tax receipts, approximating to 2 per cent. on assessments and subject to no maximum. Works were financed out of 4 per cent. loans, until the war stopped borrowing by the Trust, the loans being guaranteed by the Municipality and Government, and the revenue of the Trust being used to meet interest and sinking fund charges. Short term loans were raised in 1919 and 1920 at 6 per cent. interest and for the last two years loans are borrowed from Government (on which the rate of interest amounts to nearly 7 per cent.).

The salient features of the Trust's programme of 65 schemes as completed or sanctioned up to 1922-23 may be summarised as follows:

The total capital expenditure up to 31st March 1923 was Rs. 1,428 lakhs. The margin for expansion is about Rs. 161 lakhs. The total borrowings stand at Rs. 1,265 lakhs, involving interest and sinking fund charges of Rs. 75 lakhs per annum.

Plan of Operations.

The work of the Trust, as epitomised by these figures, can be divided into two parts. The first concerned the immediate alleviation of

the worst burdens of insanitation and the second consisted of opening up new residential areas. The Trust began by attacking the most insanitary areas, cutting broad roads through them. Meanwhile, large areas of good building land, lying idle for want of development works, were developed and brought on the market, sold at remunerative rates and largely built upon. Instances of this development are the Chaupati and Gamdevi estates, the land overhung by Malabar Hill, between it and the native city. These were cut up with fine new roads and are now nearly covered with modern suburban dwellings. Two of the most insanitary quarters in the midst of the city have been levelled to the ground and rebuilt in accordance with hygienic principles. Sanitary chawls have been built for over 21,000 persons.

The death-rate in the Trust's permanent chawls has always been considerably below the general death-rate in the vicinity. The smallest one room tenement on the Trust Estate is large enough for a family of five.

The second phase of the Trust's work, arising gradually out of the first and advancing along with its later stages, consists of the development of a new suburban area in the north of the island, beyond the present city, and the construction of great arterial thoroughfares traversing the island from north to south.

During the past few years there has been an important movement towards the establishment of co-partnership housing societies on the Board's Estate. The Board regard the new departure as one deserving every encouragement at their hands, especially in connection with the disposal of land in their suburbs in the north of the island and sites have been given to societies on specially favourable terms, and have granted valuable concessions to the Society which approached them for plots on the latter agreeing to limit their dividends. The Board have prevented, as far as possible, profiteering on their estates, by preventing the transfer of plots before completion of buildings.

But in recent years the Improvement Trust have perpetually been subjected to fierce criticism, based upon the undoubted fact that their operations dishoused population more quickly than they provided new accommodation. This evil has been aggravated by the great influx of new population into the city during the past five or six years. The result has been a gross increase of overcrowding in all kinds of housing accommodation throughout the city and a violent increase in rents. Criticism of the Trust assumed such proportions and

received such general support that the abolition of that body and the absorption of its duties by the Municipality was formulated into definite proposals by Government two years ago. The great difficulty of the housing problem, however, meanwhile compelled Government to pass Rent Acts for the protection of tenants and to tackle on a large scale the problem of providing further housing accommodation. It was recognized that vast housebuilding operations must be undertaken and this involved the supervision of the work by a special body. Consequently, the Trust from being moribund has suddenly obtained a new lease of life.

Enormous schemes for the expansion of housing in the city are now passing through the final stages before being put into execution. Government, the Improvement Trust and the great employers of labour will all be concerned in the work and the Improvement Trust have floated a huge new programme, their new schemes sanctioned representing a greater undertaking than all their former schemes put together.

The new schemes of the Trust concern the northern part of Bombay Island, where large opportunities for suburban development offer themselves. At Worli on the north-west of the island, at Dharavi on the north, and at Sewri and Wadala on the north-east, the Trust have undertaken development schemes involving the acquisition and development of 1,558 acres, or 2.43 square miles, that is, between 1/9th and 1/10th of the whole area of the Bombay Island. A considerable amount of filling of lowlying land is involved and for this purpose material from the hills on the north-east and north-west of the island will be utilised, the hills being lowered in such a manner as to level them into desirable building sites. Room will be provided for more than a quarter of a million new population, equal to nearly 1/4th of the present total population of the city, in the three new estates when they are fully developed and the recoupment which the Trust will derive from the disposal of building sites upon them will repay almost the whole of the enormous capital outlay.

A good commencement has been made of the Worli scheme where several thousands of labourers are now engaged. The Board have resolved to complete all their schemes so far sanctioned, within the next 5 years.

Government have decided to transfer the functions of the Trust to the Municipality and the necessary formalities and legislation to effect the transfer are receiving attention at their hands.

The Indian Ports.

The administration of the affairs of the larger ports (*Calcutta, Bombay, Madras, Karachi, Rangoon and Chittagong*) is vested by law in bodies specially constituted for the purpose. They have wide powers, but their proceedings are subject in a greater degree than those of municipal bodies to the control of Government. Except in Calcutta, the elected members are fewer in number than the nominated members. At all the ports the European members constitute the majority and the Board for Rangoon consists mainly of European members.

The income, expenditure and capital debt, according to the latest figures obtainable from the Department of Statistics (India) of the five principal ports managed by Trusts (Aden is excluded from the tables) are shown in the following table:—

—	Income.	Expenditure.	Capital Debt.
	£	£	£
Calcutta ..	1,270,568	1,227,628	6,852,030
Bombay ..	1,311,202	1,212,191	10,317,716
Karachi ..	371,412	311,318	1,717,408
Madras ..	131,463	134,529	967,510
Rangoon ..	348,481	283,727	1,990,800

In the Department of Statistics, India, the following returns have been compiled, showing the ratios borne by the income and the expenditure of each port to the total income and the

total expenditure, respectively, of all the chief Indian ports during the year 1918-19, the latest period for which the compilation is obtainable:—

—	Income per cent.	Expenditure per cent.
Calcutta	36·7	37·8
Bombay	37·8	38·2
Madras	3·8	4·1
Karachi	10·7	10·2
Rangoon	10·0	8·7
Chittagong	1·0	1·0

The latest return of the Department of Statistics shows that in the ten years ending 1918-19, the income and expenditure of each port have increased as shown in the following table. The total income of all the ports has increased in the decade by 91·0 per cent. and the total expenditure by 79·9 per cent. :—

—	Increase per cent.	
	Income.	Expenditure.
Calcutta	61·0	53·5
Bombay	158·7	158·7
Madras	45·7	40·3
Karachi	65·7	70·3
Rangoon	78·3	27·2
Chittagong	280·3	133·2

The war has affected the trade of all the ports in a manner which makes it useless to continue comparisons up to date on the lines of the foregoing figures.

CALCUTTA.

The Commissioners for the Port of Calcutta are as follows:—

Appointed by Government.—

Mr. S. C. Stuart-Williams, M.L.C., Chairman,
Mr. T. H. Elderton; Offg., Deputy Chairman

Elected by the Bengal Chamber of Commerce.—

Mr. R. O. Law (Messrs. Birkmyre Bros.),
Mr. E. J. Oakley (Messrs. Kilburn & Co.),
Mr. J. H. Pattinson (Messrs. H. V. Low & Co.),
Mr. N. F. Paton (Messrs. Graham & Co.),
Mr. J. W. A. Bell, M.L.C. (Messrs. Mackinnon Mackenzie & Co.) and Sir Robert Watson Smyth (Messrs. Turner Morrison & Co.).

Elected by the Calcutta Trades Association.—
Mr. W. H. Phelps (William, Heath & Co.).

Elected by the Bengal National Chamber of Commerce.—Babu Woomesh Chandra Banerjee.

Elected by the Municipal Corporation of Calcutta.—Raja Reshee Case Law, C.I.E., M.L.C.

Nominated by Government.—Sir George Godfrey (Agent, Bengal-Nagpur Railway), Mr. G. L. Colvin, C.B., C.M.G., D.S.O. (Agent, East Indian Rly.), Col. H. A. Cameron, C.I.E., R.E. (Agent, Eastern Bengal Rly.), Mr. W. W. Nind (Collector of Customs) and Captain O. Goldsmith, R.I.M.

The principal officers of the Trust are—

Secretary.—Mr. W. J. Good (Offg.).

Traffic Manager.—W. A. Burns.

Chief Accountant.—Mr. N. G. Park, C.A.

Chief Engineer.—Mr. J. McGlashan, M. INST., C.E.

Deputy Conservator.—Commander E. A. Constable, R.N.

Medical Officer.—Lt.-Col. R. P. Wilson, F.R.C.S., I.M.S.

Consulting Engineer and London Agent.—Mr. J. Angus, M. INST., C.E.

The traffic figures and the income of the Trust for the last eight years are as follows :—

Year.	Docks.			Jetties.	Nett tonnage of shipping entering the Port.	Income.
	General Export.	Coal Export.	Imports.	Imports.		
	Tons.	Tons.				Rs.
1913-14 ..	1,231,589	3,017,180	613,876	1,186,797	4,256,987	1,51,28,485
1914-15 ..	920,659	2,633,805	700,133	917,978	3,714,344	1,44,50,349
1915-16 ..	1,054,985	1,610,645	570,997	788,481	2,967,798	1,59,35,456
1916-17 ..	1,185,159	1,994,528	444,210	686,010	2,804,680	1,57,23,432
1917-18 ..	995,112	1,014,993	383,383	633,693	2,094,011	1,58,39,175
1918-19 ..	1,097,562	1,333,285	482,403	575,833	2,292,462	1,90,53,613
1919-20 ..	1,146,479	2,264,976	653,066	713,746	2,941,846	2,23,55,614
1920-21 ..	1,133,719	3,046,400	413,357	685,080	4,017,514	2,66,08,032
1921-22 ..	974,783	1,687,222	697,361	622,411	3,446,021	2,19,17,042
1922-23 ..	1,414,166	1,174,041	804,109	680,053	3,336,722	2,64,75,522

BOMBAY.

The Board of the Trustees of the Port of Bombay is constituted of 21 members as follows :—

Appointed by Government.—Mr. P. R. Cadell, C.S.I., C.I.E., I.C.S. (Chairman), (on deputation); W. H. Neilson, O.B.E. (acting); Sir Lawless Hepper, Kt., H. B. Clayton, I.C.S., Major-General Sir Henry Freeland, K.C.I.E., C.B., D.S.O., M.V.O., Captain E. J. Headlam, C.M.G., D.S.O., A.D.C., R.I.M., The General Officer Commanding, Bombay District (Major-General H.A.V.C. Cummins, C.M.G.), R. McLean, A. M. Green, I.C.S. *Elected by the Chamber of Commerce.*—The Hon'ble Sir Arthur H. Froom, Kt., H. T. Gorrie, F. C. Annesley, N. Birrell, T. E. Cunningham.

Elected by the Indian Merchants' Chamber.—The Hon'ble Sir Purshotamdas Thakurdas, Kt., C.I.E., M.B.E., Devidas Madhooji Thakersey, Lalji Naranji, Chotalal Khachand, Ishwardas Lakshmidas.

Elected by the Bombay Municipality.—The Hon'ble Mr. Phiroze C. Sethna, O.B.E., Fazul Ibrahim Rahimulla.

Elected by the Millowners' Association.—N. B. Saklatvala, C.I.E.

The following are the principal officers of the Trust :—

SECRETARY'S DEPARTMENT.

W. R. S. SHARIE, *Secretary.*

CHIEF ACCOUNTANT'S DEPARTMENT.

J. Tyers, J.P., *Chief Accountant*—(On leave).

C. P. Gay, *Acting*, „ „

CHIEF ENGINEER'S DEPARTMENT.

W. H. Neilson, O.B.E., M.A., M. INST. C.E., M.I. Mech. E., *Chief Engineer (Acting Chairman).*
J. McClure, M. INST. C.E., *Deputy Chief Engineer.*

DOCKS MANAGER'S DEPARTMENT.

A. E. PINSENT, *Docks Manager* (on leave).

C. N. RICH, B.A., *Acting Docks Manager.*

RAILWAY MANAGER'S DEPARTMENT.

J. R. Reynolds, C.I.E., V.D., *Manager.*

PORT DEPARTMENT.

Capt. G. H. Finnis, O.B.E., P.I.M., *Port Officer.*
Commander H. M. K. Mollitt, O.B.E., R.I.M.,
Assistant Port Officer.

LAND AND BUNDERS DEPARTMENT.

F. H. Taylor, P.A.S.I., M.R.S.I., *Manager.*

STORES DEPARTMENT.

H. E. Lees, *Controller of Stores.*

MEDICAL DEPARTMENT.

Dr. W. Nunan, B.A., M.D., B.Ch., *Administrative Medical Officer.*

The revenue of the Trust in 1922-23 amounted to Rs. 2,59,62,851. The expenditure amounted to Rs. 2,57,74,652. The net surplus on the year's working was Rs. 2,32,216, which has been transferred to the Revenue Reserve Fund, the balance of which at the close of the year amounted to Rs. 69,80,376. The aggregate capital expenditure during the year was Rs. 1,63,93,169. The total debt of the Trust at the end of the year amounted to Rs. 20,69,66,318.

The trade of the Port of Bombay during the last official year aggregated 332 crores in value.

The following statement shows the number of steam and square-rigged vessels which during recent years have entered the docks or been berthed at the harbour walls and paid dues, excluding those which have remained for unloading and loading in the harbour stream :—

Year.	Number.	Tonnage.
1907-08 ..	1,477	2,678,345
1908-09 ..	1,474	2,633,303
1909-10 ..	1,611	2,747,779
1910-11 ..	1,589	2,860,623
1911-12 ..	1,519	2,767,913
1912-13 ..	1,566	2,926,506
1913-14 ..	1,579	3,135,597
1914-15 ..	1,880	4,417,035
1915-16 ..	1,794	3,939,721
1916-17 ..	2,112	5,031,572
1917-18 ..	2,069	4,746,578
1918-19 ..	2,058	4,526,846
1919-20 ..	2,164	4,874,820
1920-21 ..	2,029	4,589,627
1921-22 ..	2,123	4,895,968
1922-23 ..	1,907	4,429,263

The two dry docks were occupied during the year 1922-23 by 223 vessels, the total tonnage amounting to 738,568 tons which was less than the previous year by 88,060 tons.

KARACHI.

The members of the Board of Trustees of the Port of Karachi are as follows:—

Chairman.—Mr. J. B. S. Thubron, C.I.E. (on leave). Mr. T. S. Downie, O.B.E. (acting).

Appointed by Government.—Mr. H. G. Houghton (Donald Graham & Co.), (Vice-Chairman, elected by the Board), Mr. H. H. Hood (Chief Collector of Customs in Sind), Mr. F. R. Hawkes, O.B.E. (District Traffic Superintendent, North-Western Railway, Karachi Port), Major G. N. Buckland, D.S.O. (D. A. Q. M. G., Sind Rajputana District), Mr. Gidumal Lekhraj (Representative Indian Merchant) and Khan Bahadur K. H. Katrak (Katrak & Co.).

Elected by the Chamber of Commerce.—Mr. J. R. Baxter (Mackinnon, Mackenzie & Co.), Mr. C. Dometriadi (Ralli Brothers), Mr. F. Clayton, M.L.C. (Fleming Shaw & Co.), (on leave), Mr. B. Frank Jones (Forbes Forbes Campbell & Co.), (acting).

Elected by the Municipality.—Mr. Goolam Hussein Kassim, M.L.C.

The Principal Officers of the Trust are:—

Port Officer.—Captain H. M. Salmood, C.I.E., R.I.M. (on leave), Captain N. Woodsmith, R.I.M. (acting).

Secretary and Traffic Manager.—Mr. T. S. Downie, O.B.E. (acting as Chairman).

Supernumerary Appointments.—

Secretary.—Mr. L. J. Mascarenhas.

Supernumerary Appointments.—contd.

Traffic Manager.—Mr. A. A. L. Flynn.

Chief Accountant.—Mr. B. A. Inglet, B.A., C.A.

Chief Engineer.—Mr. T. H. E. Coad, M. Inst. C.E. (on leave), Mr. H. A. L. French (acting).

Deputy Chief Engineer.—Mr. H. A. L. French (acting Chief Engineer), Mr. J. M. S. Culbertson, A. M. Inst. O.E. (acting).

The Revenue receipts and expenditure of the Port of Karachi for the year 1922-23 were as under:—

Revenue receipts (excluding the Port Fund Account) Rs. 57,38,220. Expenditure Rs. 58,05,538. Deficit Rs. 67,318. Reserve Fund Rs. 27,17,633.

The number of vessels which entered the Port during the year 1922-23 exclusive of vessels put back and fishing boats, was 2,869 with a tonnage of 2,212,229 against 2,859 with a tonnage of 2,346,617 in 1921-22. 865 steamers of all kinds entered the Port with a tonnage of 2,097,518 against 906 and 2,226,953 respectively in the previous year. Of the above 760 were of British nationality.

Imports including coal landed at the ship wharves during the year totalled 692,140 tons against 1,113,571 in the previous year. Total shipments from the ship wharves were 600,685 tons in 1922-23 against 431,277 tons in 1921-22.

MADRAS.

The following gentlemen are the Trustees of the Port of Madras:—

Officials.—Mr. Bradford Leslie, O.B.E., M. Inst. C.E., M.I.E.E., Chairman Mr. A. E. Boyd, I.C.S. (Collector of Customs), and Capt. E. W. Huddleston, C.I.E., O.B.E., R.I.M. (Presidency Port Officer).

Non-Officials.—(1) *Nominated by Government.* Brig.-Genl. Sir Charles L. Magniac, C.M.G., O.B.E., R.E., Mr. B. C. Scott, (2) *Representing Chamber of Commerce, Madras.*—Mr. K. Kay, Mr. A. J. Leech, Mr. O. E. Wood, Mr. A. C. M. Strouts, (3) *Representing Southern India Chamber of Commerce, Madras.*—Mr. R. Ry. Divan Bahadur Govindas Chattrbhoojadas Garu, M.L.C., Sir M.

Ct. Muthia Chettiar, Kt., M.L.C., (4) *Representing Madras Trades Association.*—Mr. A. M. MacDougall, M.L.C., and Mr. J. M. Smith, (5) *Representing Southern India Skin and Hide Merchants' Association.*—Mr. R. Ry. M. Balasundaram Nayadu Garu, *Representing Malaya Piece-goods Merchants' Association.*—Mr. R. Ry. Rao Sahib Batchlu Papaliya Chettiar Garu.

The receipts during the year of the Port Trust on Revenue account from all sources were Rs. 28,04,254 as against 25,43,001 in 1921-22 and the gross expenditure out of revenue was 22,33,568. During the year 632 vessels with an aggregate tonnage of 19,89,179 tons, called at the port against last year's figure of 653 vessels of 1,943,159 tons.

RANGOON.

The personnel of the Commissioners for the Port of Rangoon is comprised of the following thirteen members:—

Appointed by Government.—Messrs. J. A. Cherry, C.I.E. (Chairman), Captain A. St. C. Bowden, R.I.M. (Principal Port Officer), G. S. Hardy, I.C.S. (Chief Collector of Customs), C. Morgan-Wabb, C.I.E., M.L.C., I.C.S., (Chairman, Rangoon Development Trust), G. Scott, C.I.E., I.C.S. (Commissioner, Rangoon Corporation), Maung Po Yee, F. L. Bigg-Wither and G. R. Campbell.

Elected by the Burma Chamber of Commerce.—

Messrs. J. Hogg, M.L.C., (Vice-Chairman), J. W. Richardson, A. J. Anderson, C.S.I., M.L.C. and W. Archbald.

Elected by the Rangoon Trades Association.—Mr. M. Oppenheimer.

Principal Officers are:—

Secretary.—Mr. H. Leonard.

Chief Accountant.—Mr. D. H. James, A.C.A.

Chief Engineer.—Mr. E. C. Niven, M. INST. C.E.

Deputy Conservator.—Mr. H. G. G. Ashton, D.S.O.

Traffic Manager.—Mr. H. Cooper.

Administrative Medical Officer.—Dr. C. G. Crow, K.I.H., I.M.D.

The receipts and expenditure on revenue account of the port of Rangoon in 1922-23 were as follows:—

	Rs.
Receipts	76,94,232
Expenditure	68,67,874

CHITTAGONG.

Chittagong in Eastern Bengal, lying on the right bank of the river Karnafuli at a distance of 12 miles from the sea was already an important port in the sixteenth century, when the Portuguese gave it the name of Porto Grande.

The construction of the Assam-Bengal Rail way has facilitated the transport of trade with Assam and Eastern Bengal for which the Port of Chittagong is the natural outlet.

The chief exports are tea and jute and iron ports, piece-goods, salt, oil and machinery.

FOREIGN TRADE 1922-23. Rs. (in lakhs.)

Imports	86.86
Exports	564.06

COASTING TRADE 1922-23. Rs. (in lakhs.)

Imports	140.95
Exports	289.66

VIZAGAPATAM HARBOUR PROJECT.

The question of the creation of a harbour at Vizagapatam, to supply an outlet for a large area of fertile country hitherto undeveloped and without suitable access to the outside world, was lately brought to the fore through a report to the Bengal-Nagpur Railway Company by their consulting engineers, Sir John Wolfe Barry, Lyster and partners. This report, which was based on personal inspection, upholds the practicability of creating, at no very extravagant cost, an inland harbour to which access would be maintained by two breakwaters projecting into the sea, and by dredging a channel to the depth (in the first instance) of 24 feet. A deep-water quay would be provided, 1,500 feet in length, with a possibility of supplying further accommodation in the future. The proposals made in this report were carefully gone into at site by representatives both of the Consulting Engineer and of the Bengal Nagpur Railway and working plans have been prepared so that there might be no delay in starting work when funds became available for the purpose.

The question received sympathetic consideration on the part of the Indian Government and the Bengal-Nagpur Railway will probably be given powers to raise capital for the construction and working of the port as part of their railway system. That the creation of such a port would have a beneficial influence on the development of

The capital debt of the Port at the end of the year was Rs. 3,43,01,132. Against this should be set the total of the balance (including investments at cost) at the credit of the different sinking funds, namely, Rs. 1,03,90,568.

The total sea-borne trade of Rangoon during the year was 4,306,567 tons of which 1,171,318 tons were imports, 3,128,311 tons exports and 6,938 tons transhipment. The tonnage of goods dealt with at the jetties and foreshore for inland vessels during the year amounted to 757,364 tons. The total number of steamers (excluding Government vessels) entering the Port was 1,393, with a total nett registered tonnage of 3,308,087, being an increase of 55 steamers and 237,410 tons over the previous year.

Port Commissioners.—Mr. A. H. Clayton I.C.S., Chairman; Mr. S. C. Ghatak, M.A., M.R.A.S. Vice-Chairman; Mr. G. A. Bayley, V.D., Mr. C.P. M. Harrison M. I. C. E.; Mr. P. T. Moore; Mr. A. R. Leishman, Mr. H. C. McEwen, Captain H. W. Fox; Rai Upendralal Roy Bahadur, B.L., M.L.C.

Port Officer and Secretary to the Port Commissioners.—Commander E. C. Withers, C.I.E., R.I.M.

Port Engineer.—Mr. W. P. Shepherd-Barron, A. M. INST. C.E.

Vessels of 25 feet draught can be accommodated during the greater part of the year at four jetties which are fitted with modern equipment and capable of quick despatch.

a large area in East Central India seems unquestioned. It is pointed out that Vizagapatam, lying as it does in front of the only practicable gap in the barrier of the Eastern Ghats, is formed by nature to be the outlet of the Central Provinces, from which a considerable amount of trade has taken this route in the past, even with the imperfect communications hitherto available. A necessary complement of the scheme would be the construction of the proposed railway by Parvatipuram to Rupur, which with the existing coast line of the Bengal Nagpur Railway, would make a large and rich area tributary to the proposed port, and obviate the long and expensive circuit by Calcutta. A link would also be supplied in the most direct route to Rangoon from Europe by way of Bombay, while from an imperial point of view the possible provision of a fortified port on the long and almost unprotected stretch of coast between Colombo and Calcutta is held to be a consideration of great importance. The lofty projecting headland of the Dolphin's Nose would, it is pointed out, offer facilities for this purpose as well as protecting the entrance to the Port from the effects of south and south-westerly gales.

The necessary steps are being taken by the Government of India to achieve this end, 12 square miles of land are being acquired for the purposes of the harbour.

Laws and the Administration of Justice.

The indigenous law of India is personal and divisible with reference to the two great classes of the population, Hindu and Mahomedan. Both systems claim divine origin and are inextricably interwoven with religion, and each exists in combination with a law based on custom. At first the tendency of the English was to make their law public and territorial, and on the establishment of the Supreme Court at Calcutta in 1773 and the advent of English lawyers as judges, they proceeded to apply it to Europeans and Indians alike. This error was rectified by the Declaratory Act of 1780, by which Parliament declared that as against a Hindu the Hindu law and usage, and as against a Mahomedan the laws and customs of Islam should be applied. The rules of the Shastras and the Koran have been in some cases altered and relaxed. Instances can be found in the Bengal Sati Regulation Act of 1829; the Indian Slavery Act, 1843; the Caste Disabilities Removal Act of 1850; the Hindu Widows' Remarriage Act, 1856; and other Acts and Codes. To quote the Imperial Gazetteer, "A certain number of the older English statutes and the English common law are to a limited extent still in force in the Presidency Towns as applicable to Europeans, while much of the old Hindu and Mahomedan law is everywhere personal to their native fellow subjects; but apart from these, and from the customary law, which is as far as possible recognised by the Courts, the law of British India is the creation of statutory enactments made for it either at Westminster or by the authorities in India to whom the necessary law-giving functions have from time to time been delegated."

Codification.

Before the transfer of India to the Crown the law was in a state of great confusion. Sir Henry Cunningham described it as "hopelessly unwieldy, entangled and confusing." The first steps toward general codification were taken in 1833, when a Commission was appointed, of which Lord Macaulay was the moving spirit, to prepare a penal code. Twenty-two years elapsed before it became law, during which period it underwent revision from his successors in the Law Membership, and especially by Sir Barnes Peacock, the last Chief Justice of the Supreme Court of Calcutta. The Penal Code, which became law in 1860, was followed in 1861 by a Code of Criminal Procedure. Substantially the whole criminal law of British India is contained in these two Codes. One of the most eminent lawyers who ever came to India, Sir James Stephen, said "The Indian penal code may be described as the criminal law of England freed from all technicalities and superfluities, systematically arranged and modified in some few particulars (they are surprisingly few) to suit the circumstances of British India. It is practically impossible to misunderstand the code." The rules of Civil Procedure have been embodied in the Code of Civil Procedure. The Indian Penal Code has from time to time been amended. The Code of Civil Procedure was remodelled in 1908 and the Code of Criminal Procedure in 1903. These Codes are now in force.

Statute Law Revision.

In October, 1921, a committee was appointed under the presidency of the Hon. Mr. A. P. Muddiman, I.C.S., to deal with the question of statute law revision. The functions of the Committee are to prepare for the consideration of Government such measures of consolidation and clarification, as may be necessary to secure the highest attainable standard of formal perfection in the statute law of India. In several branches of the law consolidation has long been overdue, and it is suggested that the preparation of a Bill consolidating the existing law relating to merchant shipping, with such amendments therein as are necessitated or rendered desirable by the enactment of the English statutes since 1894 on the same subject should form the first duty undertaken by the Committee. Under the conditions resulting from the establishment of the reformed Constitution, increasing importance will attach hereafter to the periodical examination and revision of the Statute Book and the Government of India hope that the Committee will take its place as a permanent feature of the legislative machinery of the country.

European British Subjects.

Whilst the substantive criminal law is the same for all classes, certain distinctions of procedure have always been maintained in regard to criminal charges against European British subjects. Until 1872 European British subjects could only be tried or punished by one of the High Courts. It was then enacted that European British subjects should be liable to be tried for any offences by magistrates of the highest class, who were also Justices of the peace, and by judges of the Sessions Courts; but it was necessary in both cases that the magistrate or judge should himself be a European British subject. In 1883 the Government of India announced that they had decided "to settle the question of jurisdiction over European subjects in such a way as to remove from the code at once and completely every judicial disqualification which is based merely on race distinctions." This decision, embodied in the Ilbert Bill, aroused a storm of indignation which is still remembered. The controversy ended in a compromise which is thus summarised by Sir John Strachey ("India"). "The controversy ended with the virtual, though not avowed, abandonment of the measure proposed by the Government. Act III of 1884; by which the law previously in force was amended, cannot be said to have diminished the privileges of European British subjects charged with offences, and it left their position as exceptional as before. The general disqualification of native judges and magistrates remains; but if a native of India be appointed to the post of district magistrate or sessions judge, his powers in regard to jurisdiction over European British subjects are the same as those of an Englishman holding the same office. This provision however is subject to the condition that every European British subject brought for trial before the district magistrate or sessions judge has the right, however trivial be the charge, to claim to be tried by a jury of which

not less than half the number shall be Europeans or Americans..... Whilst this change was made in the powers of district magistrates, the law in regard to other magistrates remained unaltered." Since 1836 no distinctions of race have been recognised in the civil courts throughout India.

After a discussion on this subject in the Legislative Assembly in September 1921, the following motion was adopted:—"That in order to remove all racial distinctions between Indians and Europeans in the matter of their trial and punishment for offences, a committee be appointed to consider what amendments should be made in the provisions of the Code of Criminal Procedure, 1898, which differentiate between Indians and European British subjects and American and Europeans who are not British subjects in criminal trials and proceedings and to report on the best methods of giving effect to their proposals."

High Courts.

The highest legal tribunals in India are the High Courts of Judicature. These were constituted by the Indian High Courts Act of 1861 for Bengal, Bombay and Madras, and later for the United Provinces and the Punjab superseding the old supreme and Sudder Courts. The Judges are appointed by the Crown; they hold office during the pleasure of the Sovereign; at least one-third of their number are barristers, one-third are recruited from the judicial branch of the Indian Civil Service, the remaining places being available for the appointment of Indian lawyers. Trial by jury is the rule in original criminal cases before the High Courts, but juries are never employed in civil suits in India.

For other parts of India High Courts have been formed under other names. The chief difference being that they derive their authority from the Government of India, not from Parliament. In Burma there is a Chief Court, with three or more judges; in the other provinces the chief appellate authority is an officer called the Judicial Commissioner. In Sind the Judicial Commissioner is termed Judge of the Sudder Court and has two colleagues.

The High Courts are the Courts of appeal from the superior courts in the districts, criminal and civil, and their decisions are final, except in cases in which an appeal lies to His Majesty in Council and is heard by the Judicial Committee of the Privy Council in England. The High Courts exercise supervision over all the subordinate courts. Returns are regularly sent to them at short intervals and the High Courts are able, by examining the returns, by sending for proceedings, and by calling for explanations, as well as from the cases that come before them in appeal, to keep themselves to some extent acquainted with the manner in which the courts generally are discharging their duties.

Lower Courts.

The Code of Criminal Procedure provides for the constitution of inferior criminal courts styled courts of session and courts of magistrates. Every province, outside the Presidency towns, is divided into sessions divisions, consisting of one or more districts and every

sessions division has a court of session and a sessions judge, with assistance if need be. These stationary sessions courts take the place of the English Assizes, and are competent to try all accused persons duly committed, and to inflict any punishment authorised by law, but sentences of death are subject to confirmation by the highest court of criminal appeal in the province. Magistrates' courts are of three classes with descending powers. Provision is made and largely utilised in the towns; for the appointment of honorary magistrates; in the Presidency towns Presidency magistrates deal with magisterial cases and benches of Justices of the Peace or honorary magistrates dispose of the less important cases.

Trials before courts of session are either with assessors or juries. Assessors assist, but do not bind the judge by their opinions; on juries the opinion of the majority prevails if accepted by the presiding Judge. The Indian law allows considerable latitude of appeal. The prerogative of mercy is exercised by the Governor-General-in-Council and the Local Government concerned without prejudice to the superior power of the Crown.

The constitution and jurisdiction of the inferior civil courts varies. Broadly speaking one district and sessions judge is appointed for each district: as District Judge he presides in its principal civil court of original jurisdiction; his functions as Sessions Judge have been described. For these posts members of the Indian Civil Service are mainly selected though some appointments are made from the Provincial Service. Next come the Subordinate Judges and Munsiffs, the extent of whose original jurisdiction varies in different parts of India. The civil courts, below the grade of District Judge, are almost invariably presided over by Indians. There are in addition a number of Courts of Small Causes, with jurisdiction to try money suits up to Rs. 500. In the Presidency Towns, where the Chartered High Courts have original jurisdiction, Small Cause Courts dispose of money suits up to Rs. 2,000. As Insolvency Courts the chartered High Courts of Calcutta, Bombay and Madras have jurisdiction in the Presidency towns. In the mofussil similar powers were conferred on the District Courts by the Insolvency Act of 1906.

Coroners are appointed only for the Presidency Towns of Calcutta and Bombay. Elsewhere their duties are discharged by the ordinary staff of magistrates and police officers unaided by jurors.

Legal Practitioners.

Legal practitioners in India are divided into Barristers-at-Law, Advocates of the High Court; Vakils and Attorneys (Solicitors) of High Courts; and Pleaders, Mukhtars and revenue agents. Barristers and Advocates are admitted by each High Court to practise in it and its subordinate courts; and they alone are admitted to practise on the original side of some of the chartered High Courts. Vakils are persons duly qualified who are admitted to practise on the appellate side of the chartered High Courts and in the Courts subordinate to the High Courts. Attorneys are required to qualify before admission to practise in much the same way as in England. The rule that a solicitor must instruct counsel

prevails only on the original side of certain of the High Courts. Pleaders practise in the subordinate courts in accordance with rules framed by the High Courts.

Organisation of the Bar.

At Calcutta, Madras, and Bombay there is a Bar Committee presided over, *ex-officio*, by the Advocate-General. This body is elected by the barristers practising in each High Court, and its functions are to watch the interests of the Bar and to regulate its etiquette. At Allahabad, Lahore, Nagpore, and Rangoon a similar Bar Committee exists, but the electorate is extended to include the vakils or native pleaders, and the president is either the senior practising member of the Bar or the Government Advocate. In the larger Districts and Sessions Courts, an organisation representing the Bar is usually to be found, and in the subordinate Courts, including the Revenue Courts, similar machinery is generally in use. Pending an opportunity of detailed inquiries in India, these general descriptions must suffice.

Composition of the Bar.

A considerable change is occurring in the composition of the Indian Bar. The following extract from an informing article in the *Times* (May 25, 1914) indicates the character and incidence of this development. "During the last forty years, a striking change has taken place in the professional class. The bulk of practice has largely passed from British to Indian hands, while, at the same time, the profession has grown to an enormous extent. One typical illustration may be quoted. Attached to the Bombay High Court in 1871 there were 38 solicitors, of whom 10 were Indian and 28 English, and 24 advocates, of whom 7 were Indian and 17 English. In 1911, attached to the same High Court, there were 150 solicitors, of whom more than 130 were Indian and the remainder English, and 250 advocates, of whom 16 only were English and the remainder Indian."

Law Officers.

The Government of India has its own law colleague in the Legal Member of Council. All Government measures are drafted in this department. Outside the Council the principal law officer of the Government of India is the Advocate-General of Bengal, who is appointed by the Crown, is the leader of the local Bar, and is always nominated a member of the Provincial Legislative Council. In Calcutta he is assisted by the Standing Counsel and the Government Solicitor. There are Advocates-General and Government Solicitors for Bombay and Madras, and in Bombay there is attached to the Secretariat a Legal Remembrancer and an Assistant Legal Remembrancer, drawn from the Judicial Branch of the Indian Civil Service. The Government of Bengal

consults the Bengal Advocate-General, the Standing Counsel and the Government Solicitor, and has besides a Legal Remembrancer (a Civil Servant) and a Deputy Legal Remembrancer (a practising barrister); the United Provinces are equipped with a civilian Legal Remembrancer and professional lawyers as Government Advocate and Assistant Government Advocate; the Punjab has a Legal Remembrancer, Government Advocate and a Junior Government Advocate; and Burma a Government Advocate, besides a Secretary to the Local Legislative Council.

Sheriffs are attached to the High Courts of Calcutta, Madras and Bombay. They are appointed by Government, selected from non-officials of standing, the detailed work being done by deputy sheriffs, who are officers of the Court.

Law Reports.

The Indian Law Reports are published in four series—Calcutta, Madras, Bombay, and Allahabad, under the authority of the Governor-General in Council. They contain cases determined by the High Court and by the Judicial Committee on appeal from the particular High Court. These appeals raise questions of very great importance, and the Council of Law Reporting for England and Wales show their appreciation by printing the Indian Appeals in a separate volume, and have also compiled a digest of Indian Appeals covering the period 1874-1893. The other Provinces and States have series of reports issued under the authority either of the Judiciary or the State.

Legislative Power.

The supreme power of Parliament to legislate for the whole of India cannot be questioned. In practice, however, this power is little used; there being a majority of officials on the Imperial Legislative Council—a majority deliberately reserved in the India Councils Act of 1909—the Secretary of State is able to impose his will on the Government of India and to secure the passage of any measure he may frame, regardless of the opinion of the Indian authorities. Legislative Councils have been established both for the whole of India and for the principal provinces. Their constitution and functions are fully described in detailing the powers of the Imperial and Provincial Councils (q. v.). To meet emergencies the Governor-General is vested with the power of issuing ordinances, having the same force as Acts of the Legislature, but they can remain in force for only six months. The power is very little used. The Governor-General-in-Council is also empowered to make regulations, having all the cogency of Acts, for the more backward parts of the country, the object being to bar the operation of the general law and permit the application of certain enactments only.

Bengal Judicial Department.

Sanderson, The Hon'ble Sir Lancelot Chief Justice,
Mukharji, The Hon'ble Sir Ashutosh, Kt., C.S.I., M.A., D.L. Puisne Judge.

Richardson, The Hon'ble Sir Thomas William, I.C.S., Ditto
Bar-at-Law,

Bengal Judicial Department—contd.

Walmesley, The Hon'ble Mr. Hugh, I.C.S.	Puisne Judge.
Rankin, The Hon. Mr. George Claus, Bar-at-Law	Ditto.
Greaves, The Hon'ble Mr. William Ewart	Ditto.
Chatarji, The Hon'ble Sir Nalini Ranjan, M.A., B.L.	Ditto.
Newbould, The Hon'ble Mr. B. B.	Ditto. (On leave.)
Ghosh, The Hon. Mr. Charu Chander, Bar-at-Law	Ditto.
Buckland, The Hon. Mr. Justice Pullip Lindsay, Bar-at-Law	Ditto.
Pearson, The Hon. Mr. Justice Horbert Grayhurst, Bar-at-Law	Ditto.
Suhrawardy, The Hon. Mr. Justice Zahhadur Rahim Zahid, Bar-at-Law	Ditto.
Cuning, The Hon. Mr. Justice Arthur Herbert, I.C.S.	Ditto.
Ghosh, The Hon. Mr. Justice Bepin Behari	Ditto.
Panton, The Hon. Mr. Justice Edward Brookes Henderson.	Ditto.
Page, The Hon. Mr. Justice Arthur, Kt.	Ditto. (Additional).
Das, S. R., Bar-at-Law	Advocate-General.
Mitter, B. L., Bar-at-Law	Standing Counsel.
Gooding, G. C.	Government Solicitor.
Duval, The Hon. Mr. H. P., I.C.S.	Superintendent and Remembrancer of Legal Affairs.
Orr, John Williams, Bar-at-Law	Deputy Superintendent and Remembrancer of Legal Affairs.
Dwarka Nath Chakrabatti, M.A., B.L.	Senior Government Pleader.
Sadhu, Rai Bahadur Tarak Nath	Public Prosecutor, Calcutta.
Remfrey, Maurice	Registrar, Keeper of Records, Taxing Officer, Accountant-General, and Sealer, etc., Original Jurisdiction.
Satish Chandra Mitra	Registrar in Insolvency.

* Details not given of 42 Bombay suits in 1906; 56 Madras suits in 1908; 96 in 1907; 74 in 1908, 92 in 1909, 376 in 1910, 71 in 1911, 64 in 1912, 22 in 1913, and 23 suits in 1914; 4 in 1918 and 6 in 1919; 370 Bengal suits in 1909; and 49 Delhi suits in 1913 and 84 in 1914.

THE INDIAN POLICE.

The Indian Government employ (1921-22) about 203,000 Officers and men in the Indian Police. In addition to these there are about 30,000 Officers and men of the military police, of whom more than half belong to Burma. The total cost of maintaining the Force has greatly risen in recent years on account of increases of pay and allowances made on account of the increased cost of living. The Budget Estimate for 1922-23 is Rs. 90,78,000. In large cities the Force is concentrated and under direct European control; in the mofussil the men are scattered throughout each District and located at various Outposts and Police stations. The smallest unit for administrative

purposes is the Outpost which generally consists of 3 or 4 Constables under the control of a Head Constable. Outpost Police are maintained to patrol roads and villages and to report all matters of local interest to their superior, the Sub-Inspector. They have no powers to investigate offences and are a survival of the period when the country was in a disturbed state and small bodies of Police were required to keep open communications and afford protection against the raids of dacoits. It is an open question whether they are now of much use. Each Outpost is under a Police Station which is controlled by an officer known as a Sub-Inspector.

Distribution of Police.—The area of a Police Station varies according to local conditions. The latest figures available are :—

						Average area per Police Station.	Average number of Regular Civil Police per 10,000 of Population.
						Square miles.	
Bengal *	126	4·8
Assam	616	5·3
United Provinces	127	7·7
Punjab	203	10·3
North-West Frontier Province	179	10·8
Central Provinces and Berar	242	8·6
Burma *	487	13·4
Madras	144	8·0
Bombay *	252	15·0

* Excluding the towns of Calcutta, Bombay and Rangoon. The figures include the Railway police, but not Military police.

Organisation of Police.

The Police Station Officer (the Sub-Inspector) is responsible for the investigation of all cognisable crimes, that is to say, all offences in which the Police can arrest without a warrant from a Magistrate, which occur within his jurisdiction; he is also held responsible for the maintenance of the public peace and the prevention of crime. From the point of view of the Indian Ryot, he is the most important Police Officer in the District and may rightly be considered the backbone of the Force.

Superior to the Sub-Inspector is the Inspector who holds charge of a Circle containing 4 or 5 Police Stations. His duties are chiefly those of supervision and inspection. He does not ordinarily interfere in the investigation of crime unless the conduct of his subordinates renders this necessary.

The Inspector is usually a selected and experienced Sub-Inspector. Each District contains 3 or 4 Circles, and in the case of large

Districts, is divided into 2 Sub-divisions—one of which is given to an Assistant Superintendent of Police, a European gazetted Officer. The Police Force in each District is controlled by a District Superintendent of Police, who is responsible to the District Magistrate (Collector or Deputy Commissioner) for the detection and prevention of crime and for the maintenance of the public peace, and, to his Deputy Inspector-General and Inspector-General, for the internal administration of his Force. Eight or ten Districts form a Range administered by a Deputy Inspector-General, an officer selected from the ranks of the Superintendents. At the head of the Police of each Province is the Inspector-General who is responsible to the Local Government for the administration of the Provincial Police.

Separate but recruited from the District Force is the Criminal Investigation Department, which is under the control of a specially selected European Officer of the rank and

standing of a Deputy Inspector-General. The Criminal Investigation Department, usually called the C. I. D., is mainly concerned with political inquiries, seditious cases and crimes with ramifications over more than one District or which are considered too important to leave in the hands of the District Police. It is a small force of Sub-Inspectors and Inspectors who have shown their ability and intelligence when working in the mofussil and forms in each Province a local Scotland Yard.

The larger Cities of Calcutta, Bombay, and Madras have their own Police Force, independent of the Inspector-General of Police, and under the control of a Commissioner and 2 or more Deputies. For Police purposes each city is divided into divisions; in Calcutta each division is in charge of a Deputy Commissioner of Police; in Bombay and Madras of a Superintendent, these officers being selected from the European ranks of the City Force. In Bombay, however, the Superintendents are Gazetted Officers, and two of them are Indians. Each division is sub-divided into a small number of Police Stations, the station being in charge of an Inspector assisted by a Deputy Inspectors Indian Sub-Inspectors and European Sergeants.

The Supreme Government at Delhi and Simla keeps in touch with the Provincial Police by means of the Director of Criminal Intelligence and his Staff. The latter do not interfere in the Local Administration and are mainly concerned with the publication of information regarding international criminals, inter-provincial crime and Political enquiries in which the Supreme Government is interested.

Recruitment.—The constable is enlisted locally. Certain castes are excluded from service and the formation of cliques by filling up the Force from any particular caste or locality is forbidden. In some Provinces a fixed percentage of foreigners must be enlisted. Recruits must produce certificates of good character and pass a medical test. They must be above certain standards of physical development. The constable rises by merit to the rank of Head Constable and, prior to the Police Commission, could rise to the highest Indian subordinate appointments. Since 1906, his chances of promotion have been greatly curtailed; this has certainly lowered the standard coming forward for service in the Force in the lower ranks.

The Sub-Inspector, until 1906, was a selected Head Constable, but Lord Curzon's Commission laid down that Sub-Inspectors should be recruited direct from a socially better class of Indians. In most Provinces, eighty per cent. of the Sub-Inspectors are selected by nomination, trained for a year or 18 months at a Central Police

School; and, after examination, appointed direct to Police Stations to learn their work by actual experience. It is too early to judge this system by results, but it has no doubt great disadvantages and undetected crime in India is increasing rapidly.

An Inspector is generally a selected Sub-Inspector. Direct nomination is the exception, not the rule.

The Deputy Superintendent, a new class of officer, instituted on the recommendation of the Commission, is an Indian gazetted officer and is the native Assistant to the District Superintendent of Police. He is either selected by special promotion from the ranks of the Inspectors or is nominated direct, after a course at the Central Police School.

Prior to 1893, the gazetted ranks of the Force were filled either by nomination or by regimental officers seconded from the Army for certain periods. In 1893, this system was abandoned and Assistant Superintendents were recruited by examination in London. On arrival in India, they were placed on probation until they had passed their examinations in the vernacular, in law, and in riding and drill. The establishment of Police Training Schools in 1906 has done much to improve the training of the Police Probationer, and selection by examination has given Government a better educated officer, but open competition does not reveal the best administrators and should be tempered, as in the Navy, by selection.

Internal Administration.—The District Force is divided into 2 Branches—Armed and Unarmed. As the duties of the armed branch consist of guarding Treasuries, escorting treasure and prisoners and operating against dangerous gangs of dacoits, they are maintained and controlled on a military basis. They are armed and drilled and taught to shoot after military methods. The unarmed branch are called upon to collect fines magisterially inflicted, serve summonses and warrants, control traffic, destroy stray dogs, extinguish fires, enquire into accidents and non-cognizable offences. The lower grades are clothed and housed by Government without expense to the individual. The leave rules are fairly liberal, but every officer, European or Native, must serve for 30 years before he is entitled to any pension, unless he can obtain a medical certificate invaliding him from the service. This period of service in an Eastern climate is generally admitted to be too long and the efficiency of the Force would be considerably improved if Government allowed both the officers and men to retire after a shorter period of service.

STATISTICS OF POLICE WORK.

The undesirability of attaching undue importance to statistical results as a test of the merits of police work was a point upon which considerable stress was laid by the Indian Police Commission, who referred to the evils likely to result from the prevalence among subordinate officers of an impression that the advancement of an officer would depend upon his being able to show a high

ratio of convictions, both to cases and to persons arrested, and a low ratio of crime. The objection applies more particularly to the use of statistics for small areas; but they cannot properly be used as a basis of comparison even for larger areas without taking into account the differences in the conditions under which the police work; and, it may be added, they can at the best indicate only very

imperfectly the degree of success with which the police carry out that important branch of their duties, which consists in the prevention of crime. These considerations have been emphasized in recent orders of the Government of India. Subject to these observations,

the figures below may be given as some indication of the volume of work falling upon the police, and of the wide differences between the conditions and the statistical results in different provinces:—

Administrations.	Number of Offences reported.	Number of Persons under Trial.	Persons whose cases were disposed of				Persons remaining under Trial at the end of the Year.
			Dis-charged or Acquitted.	Con-victed.	Com-mitted or Referred	Died, Escaped or Trans-ferred to another Province.

JAILS

Jail administration in India is regulated generally by the Prisons Act of 1894, and by rules issued under it by the Government of India and the local governments. The punishments authorised by the Indian Penal Code for convicted offenders include transportation, penal servitude, rigorous imprisonment (which may include short periods of solitary confinement), and simple imprisonment. Accommodation has also to be provided in the jails for civil and under-trial prisoners.

The origin of all jail improvements in India in recent years was the Jail Commission of 1889. The report of the Commission, which consisted of only two members, both officials serving under the Government of India, is extremely long, and reviews the whole question of jail organization and administration in the minutest detail. In most matters the Commission's recommendations have been accepted and adopted by Local Governments, but in various matters, mainly of a minor character, their proposals have either been rejected *ab initio* as unsuited to local conditions, abandoned as unworkable after careful experiment or accepted in principle but postponed for the present as impossible.

The most important of all the recommendations of the Commission, the one that might in fact be described as the corner stone of their report, is that there should be in each Presidency three classes of jails: in the first place, large **central jails** for convicts sentenced to more than one year's imprisonment; secondly, **district jails**, at the head-quarters of districts; and, thirdly, **subsidiary jails** and "lock-ups" for under-trial prisoners and convicts sentenced to short terms of imprisonment. The jail department in each province is under the control of an Inspector-General; he is generally an officer of the Indian Medical Service with jail experience, and the Superintendents of certain jails are usually recruited from the same service. The district jail is under the charge of the civil surgeon, and is frequently inspected by the district magistrate. The staff under the Superintendent includes, in large central jails, a Deputy Superintendent to supervise the jail manufactures, and in all central and district jails one or more subordinate medical officers. The executive staff consists of jailors and warders, and convict petty officers are employed in all central and district jails, the prospect of promotion to one of these posts being a strong inducement to good behaviour. A Press Note issued by the Bombay Government in October, 1915, says:—"The cadre and emoluments of all ranks from Warder to Superintendent have been repeatedly revised and altered in recent years. But the Department is not at all attractive in its lower grades. The two weak spots in the jail administration at the moment are the insufficiency of Central Prisons and the difficulty of obtaining good and sufficient warders."

Employment of Prisoners.—The work on which convicts are employed is mostly carried on within the jail walls, but extra-mural employment on a large scale is sometimes allowed, as, for example, when a large

number of convicts were employed in excavating the Jhelum Canal in the Punjab. Within the walls prisoners are employed on jail service and repairs, and in workshops. The main principle laid down with regard to jail manufactures is that the work must be penal and industrial. The industries are on a large scale, multifarious employment being condemned, while care is taken that the jail shall not compete with local traders. As far as possible industries are adapted to the requirements of the consuming public departments, and printing, tent-making, and the manufacture of clothing are among the commonest employments. Schooling is confined to juveniles; the experiment of teaching adults has been tried, but literary instruction is unsuitable for the class of persons who fill an Indian jail.

The conduct of convicts in jail is generally good, and the number of desperate characters among them is small. Failure to perform the allotted task is by far the most common offence. In a large majority of cases the punishment inflicted is one of those classed as "minor." Among the "major" punishments feters take the first place. Corporal punishment is inflicted in relatively few cases, and the number is steadily falling. Punishments were revised as the result of the Commission of 1889. Two notable punishments then abolished were shaving the heads of female prisoners and the stocks. The latter, which was apparently much practised in Bombay, was described by the Commission as inflicting exquisite torture. Punishments are now scheduled and graded into major and minor. The most difficult of all jail problems is the internal maintenance of order among the prisoners, for which purpose paid warders and convict warders are employed. With this is bound up the question of a special class of well-behaved prisoners which was tried from 1905 onwards in the Thané Jail.

Juvenile Prisoners.—As regards "youthful offenders"—i.e., those below the age of 15—the law provides alternatives to imprisonment; and it is strictly enjoined that boys shall not be sent to jail when they can be dealt with otherwise. The alternatives are detention in a reformatory school for a period of from three to seven years, but not beyond the age of 18; discharge after admonition; delivery to the parent or guardian on the latter executing a bond to be responsible for the good behaviour of the culprit; and whipping by way of school discipline.

The question of the treatment of "young adult" prisoners has in recent years received much attention. Under the Prisons Act, prisoners below the age of 18 must be kept separate from older prisoners, but the recognition of the principle that an ordinary jail is not a fitting place for adolescents (other than youthful habituals) who are over 15, and therefore ineligible for admission to the reformatory school, has led Local Governments to consider schemes for going beyond this by treating young adults on the lines followed at Borstal, and considerable progress has been made in this direction. In 1905, a special class for selected juveniles and young adults was established at the Dharwar

jail in Bombay; in 1908 a special juvenile jail was opened at Alipore in Bengal; in 1909 the Melkita jail in Burma and the Tanjore jail in Madras were set aside for adolescents, and a new jail for juvenile and "juvenile adult" convicts was opened at Bareilly in the United Provinces; and in 1910 it was decided to concentrate adolescents in the Punjab at the Lahore District jail, which is now worked on Borstal lines. Other measures had previously been taken in some cases; a special reformatory system for "juvenile adults" had, for example, been in force in two central jails in the Punjab since the early years of the decade, and "Borstal enclosures" had been established in some jails in Bengal. But the public is slow to appreciate that it has a duty towards prisoners, and but little progress has been made in the formation of Prisoners' Aid Societies except in Bombay and Calcutta, though even in those cities much remains to be done.

Reformatory Schools.—These schools have been administered since 1899 by the Education department, and the authorities are directed to improve the industrial education of the inmates, to help the boys to obtain employment on leaving school, and as far as possible to keep a watch on their careers.

Transportation.—Transportation is an old punishment of the British Indian criminal law, and a number of places were formerly appointed for the reception of Indian transported convicts. The only penal settlement at the present time is Port Blair in the Andaman Islands.

Commission of Enquiry, 1919.—A committee was appointed to investigate the whole system of prison administration in India with special reference to recent legislation and experience in Western countries. Its report, published in 1921, was summarised in the Indian Year Book, 1922 (pages 670-671). A number of reforms were advocated but, owing to financial stringency, it has not yet been possible to introduce some of the more important of them.

Fines and Short Sentences.—Those sections of the Indian Penal Code, under which imprisonment must be awarded when a conviction occurs, should be amended so as to give discretion to the court. Sentences of imprisonment for less than twenty-eight days should be prohibited.

The Indeterminate Sentences.—The sentence of every long-term prisoner should be brought under revision, as soon as the prisoner has served half the sentence in the case of the non-habitual, and two-thirds of the sentence in the case of the habitual, remission earned being counted in each case. The revision should be carried out by a Revising Board, composed of the Inspector-General of Prisons, the Ses-

sions Judge and a non-official. In all cases, the release of a prisoner on parole should be made subject to conditions, breach of which would render him liable to be remanded to undergo the full original sentence. The duty of seeing that a prisoner fulfils the conditions on which he was released should not be imposed upon the police or upon the village headman, but special officers, to be termed parole officers, should be appointed for the purpose. These parole officers should possess a good standard of education, though not necessarily a university degree, and should both protect and advise the released prisoner and report breaches of the conditions of release.

Transportation and the Andamans.—If any fresh attempt at colonisation is made, it should be in an entirely new locality. A fresh attempt at colonisation in the Middle Andaman is not recommended. The retention of the settlement at Port Blair on the present lines is not recommended. The entire abandonment of the Andamans as a place of deportation is not recommended. Deportation to the Andamans should cease, except in regard to specially dangerous prisoners and any others whose removal from Indian jails is considered by the Government to be in the public interests. The existing restrictions as to age and physical condition of prisoners sentenced to transportation to the Andamans should, unless special medical grounds exist in any particular case, cease to apply. The Indian Penal Code should be amended by the substitution of rigorous imprisonment for transportation. In provinces where the available prison accommodation will not permit of the immediate cessation of deportation of all but selected prisoners, the Star class should be the first, and the habitual the last, to be detained in Indian jails. No female should in future be deported to the Andamans, and those now there should be brought back to India and distributed among the Provinces to which they belong. In those Provinces where the jails are insufficient to detain prisoners now deported, additional accommodation should be provided as soon as possible.

Criminal Tribes.—The first essential of success in dealing with the criminal tribes is the provision of a reasonable degree of economic comfort for the people. It is therefore of paramount importance to locate settlements where sufficient work at remunerative rates is available. Large numbers of fresh settlers should never be sent to a settlement without first ascertaining whether there is work for them. Commitment to settlements should, as far as possible, be by gangs not by individuals. It is desirable to utilise both Government and private agency for the control of settlements.

The variations of the jail population in British India during the five years ending 1921 are shown in the following table:—

—	1921.	1920.	1919.	1918.	1917.
Jail population of all classes on 1st January	118,250	120,133	122,158	115,589	115,731
Admissions during the year	593,348	578,109	696,568	605,242	547,810
Aggregate	711,508	698,242	818,726	720,831	663,541
Discharged during the year from all causes	534,681	579,992	698,591	598,678	547,981
Jail population on 31st December ..	126,917	118,250	120,135	122,158	115,610
Convict population on 1st January ..	100,541	101,617	100,220	95,468	102,208
Admissions during the year	176,056	168,572	200,442	166,308	160,556
Aggregate	276,597	270,189	300,662	261,771	262,764
Released during the year	167,403	166,184	195,164	166,378	165,575
Transported beyond seas	537	1,556	1,208	1,471	1,544
Casualties, &c.	2,832	2,563	3,584	4,590	2,452
Convict population on 31st December.	106,117	100,541	101,617	100,220	95,468

More than one-half of the total number of convicts received in jails during 1921 came from the classes engaged in agriculture and cattle tending, about 145,000 out of 176,000 are returned as illiterate.

The percentage of previously convicted prisoners was 13·37 as against 15·16 in 1920 while the number of youthful offenders rose from 399 to 417. The following table shows the nature and length of sentences of convicts admitted to jails in 1919 to 1921:—

Nature and Length of Sentence.	1921.	1920.	1919.
Not exceeding one month	38,661	38,706	45,130
Above one month and not exceeding six months.	73,362	70,745	83,535
" six months one year ..	32,356	31,916	37,979
" one year five years ..	25,257	21,550	26,045
" five years ten	3,240	2,796	3,866
Exceeding ten years	428	227	239
Transportation beyond seas—			
(a) for life	1,439	1,277	2,011
(b) for a term	437	628	828
Sentenced to death	878	750	863

The total daily average population for 1921 was 99·41 the total offences dealt with by criminal courts was 735, and by Superintendents 127,595. The corresponding figures for 1920 were 98,876,232 and 139,105 respectively.

The total number of corporal punishments showed a decrease, viz., from 294 to 234. The total number of cases in which penal diet (with and without solitary confinement) was prescribed was 6,037 as compared with 6,555 in the preceding year.

Total expenditure increased from Rs. 1,53,46,545 to Rs. 1,67,54,616 and total cash earnings increased from Rs. 20,42,981 to Rs. 28,67,629; there was, consequently an increase of Rs. 5,65,983 in the net cost to Government.

The death rate increased from 19·76 per mille in 1920 to 20·36 in 1921. The admissions to hospital were higher, and the daily average number of sick fell from 29·88 to 28·32. The chief causes of death were tubercle of the lungs, dysentery and pneumonia.

The Laws of 1923

BY

RATANLAL AND DHIRAJLAL

(Editors, "Bombay Law Reporter").

The Criminal Tribes Amendment Act.—In 1911, the Crimes Tribes Act was enacted by the Government of India to regulate the movements and exercise strict watch over criminal tribes in different provinces in India. A conference was held in Delhi in 1919 consisting of representatives of British Indian Provinces and Indian States to consider the working of the Act. To carry out the recommendations made by that conference the present Act was passed. It extends the provisions of the Act to Rangoon proper and the presidency towns. When a criminal tribe is restricted in its movements to a specified area it requires the sanction of the local Government before it be allowed to move to another area: this machinery was cumbersome and slow to move. This can now be done by an officer specially empowered in that behalf, if the movement is to another area in the same district (section 5). When the movement is to another province the sanction of the local Government of that province is to be taken (section 13A). Similarly a criminal tribe can be moved to the territory of an Indian State (section 27A). Section 22 has been amended and a member of a criminal tribe can be arrested without warrant for an offence punishable under the section.

The Malabar (Completion of Trials) Supplementing Act.—On the outbreak of widespread riots in Malabar, the Governor-General of India in Council promulgated an Ordinance for Completion of Trials. In due course the Ordinance would expire by efflux of time. The Madras Legislative Council, therefore, passed Act I of 1923 for Completion of the Trials. The Act gave appellate jurisdiction to the Madras High Court. It was discovered that the vesting of the jurisdiction aforesaid was *ultra vires* of the Madras Legislature. The present Act is accordingly passed to confer the appellate jurisdiction on the Madras High Court.

The Cotton Transport Act.—The Indian Cotton Committee which sat in 1917 was of opinion that the long staple cotton ran great danger of losing its character and reputation. It pointed out that the danger arose in four different ways: (1) by admixture of long staple cotton with short staple cotton in certain local areas; (2) this admixture led to the deterioration of the genuine seed and was responsible for inferior product; (3) soft cotton waste also used for adulteration; and (4) short staple cotton was first ginned to long-staple area and thence re-booked as long-staple cotton. To check these rapidly growing evils, this Act has been enacted. Section 3 gives power to local Government to issue notification prohibiting import of cotton into a protected area. Section 4 permits the Station-Master of any railway station outside a protected area to decline to accept for transmission any packages or bales of cotton to any station within the area so prohibited. If a manufacturer within such area wishes to import

cotton from outside he can do so under a license. Section 5 authorises the station-master within the prohibited area to decline to deliver any smuggled cotton. Any person offending against any of the foregoing provisions is liable to be sentenced to pay a fine of Rs. 1,000 on first conviction; and to suffer imprisonment for three months or to pay a fine of Rs. 5,000 or both on any subsequent conviction. No suit or other legal proceeding can lie against any person for anything done in good faith under the Act (section 9).

The Indian Mines Act.—The earlier Act relating to Mines was passed in 1901. It has had to race with, or at the very least, to keep pace with factory legislation which was moving rather rapidly in India. In the meanwhile the International Labour Conference met in Washington in 1921; and later at Geneva. The recommendations made at these conferences had to be translated into the provisions of an Act of Legislature. The new Act is hence a notable departure from the old one. The "Child" which hitherto was of twelve years has an extension of one year more (section 3 (c)). The definition of 'mine' is enlarged. It means "any excavation where any operation for the purpose of searching for or obtaining minerals" is going on and includes all upper works as well as operations below the surface (section 3 (f)). The 'week' has been so defined as to make every Sunday a day of rest (section 3 (1)). Chapter II deals with the appointment and powers of the Chief Inspector and Inspectors of Mines (sections 4-9). Chapter III treats of Mining Boards and Committees. The former consists of (1) a Government Officer, (2) Chief Inspector, (3) two persons to represent employees appointed by local Government and (4) two persons nominated by mine owners (section 10). The Committee is composed of (1) a Chairman nominated by Local Government; (2) a duly qualified person nominated by Chairman; (3) one person appointed by Government to represent labour and (4) one person nominated by mine owners (section 11). The mining board can exercise any of the powers of an inspector; and both the Board and the Committee have the power to enforce attendance of witnesses and to compel production of documents and material objects (section 12). Chapter IV regulates mining operations and management of mines. Every mine must have a duly qualified manager (section 15). Section 16 defines duties and responsibilities of owners, agents and managers. The provisions as to health and safety of operatives are contained in Chapter V. Every mine must provide for conservancy (section 17) and sufficient medical appliances (section 18). Where a danger not expressly provided for is found to exist, the Chief Inspector or an Inspector can have it safeguarded (section 19). Whenever an accident happens, due notice of it should be given (section

20). The Government have the power to appoint Court of Inquiry in the case of an accident (section 21); and the report made by the Court may be published (section 22). Chapter VI revises the hours and limitation of employment in the light of resolutions adopted at the International Labour Conferences. The hours of employment in a mine are limited to six days in a week; and to fifty-four hours in a week for under-ground works (section 23); but in cases of emergency, the limit may be exceeded (section 25). A child cannot be employed in under-ground work (section 26). The Chapter following gives to the Governor-General in Council power to make rules, regulations and bye-laws. Chapter VIII speaks of penalties and procedure. Section 34 penalises obstruction to Inspector with three months' imprisonment and a fine of Rs. 500; and the same punishment is imposed for falsification of records (section 35). A fine of Rs. 500 is provided for omission to furnish plans (section 36); for contravention of provisions regarding employment of labour (section 37); for omission to give notice of accidents (section 38); for contravention of law attended with dangerous results (section 40). Prosecution under the Act can only lie if complaint is made within six months of the date of offence (section 42). Only a Presidency Magistrate or a First Class Magistrate can take cognizance of the offence (section 43). The provisions of the Act apply to Crown Mines also (section 48).

The Indian Boilers Act.—Hitherto every province had its own local Act to govern the regulation and inspection of steam boilers. It gave occasion to much diversity and also to contradiction in the provisions. The regulation of boilers became an all India subject under the Devolution Rules. The Indian Government, therefore, unified the provisions of the Boilers Acts in one general uniform measure. The local Government has the power to appoint Chief Inspectors and Inspector under the Act (section 5). No one can use unregistered or uncertified boiler (section 6). Every boiler in use must be registered (section 7) and the certificate granted must be renewed from time to time (section 8). Pending the grant of a certificate the boiler may be used (section 10). A certificate once granted is liable to be revoked (section 11). No structural alteration, addition or renewal can be made in a boiler without the sanction of the Chief Inspector (section 12); alterations in steam pipes are subject to the like control (section 13). Every owner is bound to give every facility to an Inspector for examination of boilers (section 14). The Inspector has the right of entry for the purpose (section 17). Whenever any accident occurs to a boiler or a steam-pipe it should be reported to the Inspector (section 18). An appeal lies from an order passed by an Inspector to the Chief Inspector (section 19); and to the appellate authority from an order passed by the Chief Inspector (section 20). The orders passed by the appellate authority are final and cannot be called in question in any Court (section 21). A penalty of a fine of Rs. 100 is provided for (1) refusal to produce certificate (section 22) and (2) illegal use of boiler (section 23). A fine of Rs. 500 can be inflicted for omission to report transfer of boilers from one place to another, or to fix the register number on a boiler or to

report structural alterations in a boiler, or for tampering with the safety-valve (section 24), or for tampering with register-mark (section 25). Prosecutions under the Act must be instituted within six months (section 26) and can be entertained only by a Presidency Magistrate or a First Class Magistrate (section 27). The fees and penalties under the Act are recoverable as arrears of land revenue (section 32). The Act applies also to boilers belonging to the Crown (section 33).

The Cantonments (House Accommodation) Act.—Almost every cantonment in India has houses built by private owners. Those houses are allowed to be built on cantonment terms which are that on military emergency the houses are to be vacated by their owners or tenants and they are placed at the disposal of Government which pays reasonable rent for their use and occupation. Every house within cantonment limits is liable to appropriation by Government on lease (section 5). Such a house can be inspected prior to military occupation (section 6) and the owner can be called upon to execute a lease of it in favour of Government for such period as may be required (section 7). Before a house can be occupied for a hospital, school, hostel, bank, hotel, shop or club, previous sanction of the Officer Commanding must be obtained (section 9). A house cannot be appropriated if it is already occupied by a school, etc., or by a railway administration or by a club or by the owner himself (section 10). Where a house is appropriated, a notice of 21 days is given for unoccupied houses and of thirty days for occupied houses (section 11) or a notice of six months in cases of long term tenancies (section 14). On failure of the owner to give up peaceful possession, the District Magistrate shall enter upon the premises and enforce the surrender of the house (section 12). Under certain circumstances the owner can call upon the Government to buy up his house (section 13). The owner can require arbitration on the question of rent (section 15) or of repairs (section 16). When there is devolution of interest in a house in a cantonment notice of it should be given to the Commanding Officer (section 18). Sections 19 to 23 deal with Committees of arbitration and their powers. A decision of the Committee may be appealed from to the Civil Court (section 19). An appeal also lies to the Officer Commanding from an order under section 7 (section 20) but his decision is final (section 32). No suit or other legal proceeding can lie against any person for any thing done in good faith under the Act (section 38).

The Indian Naval Armament Act.—In 1922, a treaty between all the world naval powers was signed at Washington for the Limitation of Naval Armaments. The present Act is passed to fulfil the obligations imposed by that treaty. Its object is to lay down restrictions on the buildings of vessels of war and for the adapting of any ship for use as a vessel of war. It is, therefore, enacted that no person shall "build any vessel of war, or alter, or arm or equip any ship so as to adapt for use as a vessel of war" (section 3). A person offending against the Act is liable to be sentenced to imprisonment for two years or to pay a fine of Rs. 1,000 (section 5). The ship so illegally built or fitted out is liable

to forfeiture (section 6). Power is given to search a suspected ship (section 7). Only a Presidency Magistrate or a Magistrate of the First Class can try offences under the Act (section 13). A person acting *bona fide* under the provisions of this Act is protected against a suit or legal proceeding (section 14).

The Workmen's Compensation Act.—The trend of legislation in India has recently been in the wake of amelioration in the conditions of labour. The present Act forms a notable addition to it. The growth of large factories and industries has led to the huddling together of numbers of workmen on a scale never thought of before. Necessity, therefore, has arisen for safeguarding them. This safeguard cannot operate sufficiently through inspection by Government Officers: the legislature have therefore devised payment of monetary compensation by the employer for injury caused to his workmen (section 3). If the injury result in death the employer is liable to compensate in case of an adult workman with thirty months' wages or Rs. 2,500 whichever is less or to pay Rs. 200 in the case of a minor workman. In the case of permanent total disablement, he is liable to pay to an adult, forty-two months' wages of Rs. 3,500 whichever is less; or to a minor, eighty-four months' wages or Rs. 3,500. In the case of temporary disablement half of the salary during disablement or five years which is the shorter period (section 4). The claim to compensation must be lodged within six months of the accident (section 10). The person injured must permit himself to be medically examined free of charge if required (section 11). In certain cases a person employing a contractor to do "his trade or business" remains liable for injuries caused to the workman employed by the contractor (section 12). Where a workman has received compensation from his employer, but in reality a stranger is liable to pay it, the employer can recover the amount from the stranger (section 13). If the employer becomes insolvent, the workman can recover compensation from the insurer if any (section 14). The provisions of the Act are made applicable to masters of registered ships and seamen subject to qualifications mentioned in section 15. Any contract by a workman relinquishing any right of compensation from the employer for personal injuries caused to him is null and void (section 17). The questions relating to the liability to pay and the amount of compensation under the Act can be settled only by a Commissioner and not by a Civil Court (section 19). The Commissioner may be appointed by the Local Government (section 20). It is only when the parties concerned fail to settle the compensation by agreement that they can resort to the Commissioner (section 22), who has the powers of a Civil Court (section 23), and before whom the parties can appear by a lawyer (section 24). It is competent to the Commissioner to refer any questions to the High Court (section 27). If parties settle their differences by agreement, such agreement needs to be registered by the Commissioner (section 28). If the agreement is not so registered the employer remains liable to pay full amount of compensation over again (section 29).

Appeals lie to the High Court from some of the orders of the Commissioner (section 30).

The amount of compensation either under an agreement or otherwise may be recovered by the Commissioner as an arrear of land revenue (section 31).

The Indian Factories (Amendment) Act.—The introduction of sixty working hours in a week in a factory has led to the amendment in section 22 of the Factories Act of 1911 which makes provision for an intervening holiday. Where any person is employed on a Sunday in consequence of his having a holiday on one of the three days preceding that Sunday, that Sunday shall, for the purpose of calculating the weekly hours of work of such person, be deemed to be included in the preceding week (section 2). Not only "machinery" but "electrical fittings," also are required to be fenced (section 3).

The Indian Paper Currency Act.—This is a purely consolidating measure and boils down into one Act six different Acts enacted at different times. It starts with a definition of "universal currency note" of denominations ranging from Re. 1 to Rs. 100. Other denominations can be universalised in India by a Government Notification (section 2). These notes are interchangeable with current metallic coins (section 11). A universal currency note is payable at any office of issue throughout India (section 15). The issue of currency note is supported by a paper currency reserve. It consists of two parts: (1) the metallic reserve, consisting of the coined metal and gold and silver bullion held on that account by the Secretary of State or the Governor-General in Council; and (2) the securities reserve (section 18). Powers have been reserved to issue currency notes against bills of exchange (section 21). The Governor-General in Council may convert any of the coin or bullion in reserve into ordinary coin or bullion under section 11 (section 20). Coin and bullion not in India may under certain circumstances be deemed to be part of the reserve (section 22). Securities held in reserve may sometime be sold and replaced (section 27). No person can draw any bill or hundies or promissory notes payable to the bearer on demand or borrow on such instrument (section 25); if he does so he is liable to be fined in a sum equal to the amount of the instrument (section 28). A person is entitled to recover from Government the value of any lost, mutilated or imperfect currency note (section 28).

The Repealing and Amending Act.—The purpose of this Act is to remove unnecessary words and phrases from the existing Acts passed by the Indian legislature from time to time.

The Criminal Law Amendment Act.—This Act is popularly known as the Racial Distinctions Act. Under the Criminal Procedure Code as it stood hitherto European British subjects in India had privileges when tried for a criminal offence. These privileges always produced heart-burning in the Indian subjects of His Majesty. Time after time resolutions were moved in the Indian Assembly to do away with the preference shown; and even the present Viceroy promised to set matters right. A Commission was appointed to examine the question. The present Act is based on the recommendations of the Commission. A European British

subject cannot be tried by a Magistrate of the Second or Third Class when the offence is punishable with a fine exceeding Rs. 50 or imprisonment (section 29A). Only the Court of Session can pass upon him a sentence of death, penal servitude, imprisonment or fine; but a District or First Class Magistrate can only sentence him to imprisonment for one year or fine up to Rs. 1,000 (section 34A). The equalisation is sought thus: section 275 and section 284A of the Criminal Procedure Code are so framed that a European British subject or an Indian British subject can claim that he should be tried by a jury or assessors the majority of which is drawn from his own countrymen. In cases where there is a joint trial of both, each one can claim a separate trial (section 285A). Chapter 33 of the Code has been re-cast. An Indian or a European British subject can claim as of right to be tried under this Chapter (section 443). In summons cases the Magistrate shall direct that the case be tried by a Bench of two Magistrates of First Class one of whom is a European and the other an Indian. If the two Magistrates differ, the whole case is to be laid before a Sessions Judge for decision. Any sentence passed is appealable (section 445). In warrant cases, the Magistrate, if he does not discharge the accused, should commit him to the Court of Session (section 446). The sentences passed are subject to ordinary appeals (section 447).

The Married Women's Property (Amendment) Act.—Section 6 of the Married Women's Property Act, 1874, has been so amended that if a Hindu effects an assurance on his life and expresses the policy to be for the benefit of his wife, on his death the wife becomes entitled to the money. The amendment settles the conflict between Madras High Court (37 Mad. 483) and Bombay High Court (37 Bombay 471) on the point.

Indian Cotton Cess Act.—The Indian Cotton Committee which met in 1917-18 recommended the constitution of a permanent Central Cotton Committee, which has now been called into being (section 4). There is also cess imposed of annas two on each standard bale of 400 lbs. for cotton exported by sea from India or consumed in any mill in British India (section 3). The proceeds of the sale are to be applied to "promoting agricultural and technological research in the interests of the cotton industry in India." (section 12).

The Indian Income-Tax Amendment Act.—The present Act seeks to remove two defects that have been discovered in the main Act. The perquisite enjoyed by a person in the shape of a rent-free residence is liable to income-tax (section 2). The adjustments of assessments of income tax which were introduced in 1922 are now made permanent from year to year (section 3).

The Government Savings Banks Amendment Act.—It always popularises an institution when every facility is given to the heirs of a deceased depositor to withdraw amount standing in his name. The set constitution of the Imperial Bank requires that for withdrawing such amount the heir or legal representative must be armed with either probate or letters of administration. This stringent requirement is now relaxed in the case of a savings bank deposit,

Where the amount does not exceed Rs. 3,000 the Secretary, or where it does not exceed Rs. 1,000 any officer employed in the management, may pay it over to the heir, even in the absence of probate or letters of administration (section 4).

The Prisoners (Amendment) Act.—Section 29 of the Prisoners Act, 1920, is amended in a small particular and its provisions are extended to Central Provinces and Berar.

The Criminal Procedure (Amendment) Act.—A new section 29B is added to the Criminal Procedure Code, which empowers certain Magistrates to try juvenile offenders under the age of 15 years for offences not punishable with death or transportation for life, and deal with them under the Reformatory Schools Act. Section 59 has been amended to enable a private person to arrest any person who in his view commits a non-bailable offence or any proclaimed offender. Sections relating to security procedure are amended here and there. Section 133 relating to conditional order for removal of nuisance is drafted anew; and a new section 139A is added to provide procedure where existence of public right is denied. Sections 144 and 145 which deal with the fertile topic of disputes regarding immovable property are greatly altered; and a new section 147 is put in to settle the disputes concerning rights of use of immovable property. Under section 162, a statement made by any person to a police-officer in the course of the investigation need not be signed. It will not form any evidence at the trial. Section 195 regarding sanctions to prosecute has undergone great change. It is no longer competent now to give sanction to a private person; but only the public servant may obtain it. It was surmised that in some cases the sanctions were not *bona fide* taken out but were held in *terrorem* over their victims or used for the purpose of coercing them. The list of offences which can be compounded is much enlarged in the new section 345 and even the High Court in revision may allow a case to be compounded. The provisions for recovery of fines (s. 386) are made elaborate. The Magistrate may either issue a warrant for the levy of the amount by attachment and sale of the offender's moveable property; or issue a warrant to the Collector authorising him to raise it by sale of moveable or immovable property of the offender. An appeal has been provided in security proceedings. An order for security under section 118, if passed by a Presidency Magistrate, is appealable to the High Court; or if passed by any other Magistrate, to the Court of Session. Similar appeals are provided against orders rejecting surety under section 122. A new section 415A provides that where more than one person are jointly tried at one trial and an appealable sentence is passed on one of them only, all the accused have a right of appeal. Sections 439 is altered; and when a person is called upon to show cause why a sentence passed upon him should not be enhanced, he can also show cause against his conviction. The section 476 referring to directions to prosecute is made more precise; and a superior Court is now given power to act under it when the lower Court has not acted (section 476A). An order passed under the foregoing is now made appealable (section 4).

section 488 relating to maintenance is relaxed a little; no warrant can issue for recovery of the amount unless the application is made within a year of the order. The powers to issue a writ of Habeas Corpus which were hitherto confined to the High Courts in their original jurisdiction are now extended to the limits of their appellate jurisdiction as well. An important diversion is made in the law of bail (section 497) and the Court may direct that any person under the age of sixteen years or any woman or any sick or infirm person accused of a non-bailable offence be released on bail. When a surety to a bond dies or becomes insolvent the Court may order the person bound over to furnish fresh security (section 514A). A new section (section 516A) is introduced to empower the Court to pass orders as regards custody of property pending the disposal of a case when a person is accused of an offence under the Naval Discipline Act or the Army Act or the Air Force Act. The High Court can, on the application of the Advocate General, transfer the case to itself (section 625). When allegations are made against the conduct of a public servant in the course of an inquiry or trial, the party complaining may put in an affidavit in support of his allegations (section 539A). A Judge or a Magistrate can when he thinks fit make local inspection, but must record a memorandum of any relevant facts observed at such inspection (section 539B). The inherent powers of the High Court are expressly saved in section 561A. The beneficent provisions of section 562 are greatly enlarged. Any person not under 21 years of age convicted of an offence punishable with imprisonment for not more than 7 years; any person under 21 years or a woman convicted of an offence not punishable with death or transportation, and without any previous conviction, may be released on probation of good conduct. The order may be passed by an appellate Court or even a Court in revision (section 562).

The Indian Official Secrets Act.—There were hitherto two Acts on the subject: (1) The Indian Official Secrets Act of 1889 and the English Official Secrets Act of 1911. Both of these applied to India. The latter is replaced by a more comprehensive provision in England in 1920; but the latter statute does not apply to India. The three Acts are consolidated in the present measure. Penalties for spying are stringent and vary from imprisonment for three years to fourteen years (section 3). At the trial, communications with foreign agents are by themselves evidence of commission of certain offences (section 4). Wrongful communication of official secret is punishable with two years imprisonment or fine (section 5) and a similar penalty is provided for unauthorised use of uniforms, or falsification of reports, etc. (section 6); or for interference with officers of police or members of His Majesty's forces (section 7). An attempt or abetment is punishable with the same severity (section 9). Harbouring of spies is visited with imprisonment for one year or fine (section 10). Section 14 empowers the Court to hold proceedings in camera. For an offence by a company or a corporation, every director or officer in the Company is liable (section 15).

The Indian Penal Code (Amendment) Act.—In 1910, there met at Paris the Inter-

national Convention for the suppression of White Slave Traffic. The Convention adopted certain resolutions to that end. Those resolutions which were accepted by the Government of India are carried out by this measure. Any person inducing a woman to go from any place for immoral purposes is liable to be punished under Section 366. Procuration of girls under 16 years of age for sexual purposes is penalised with imprisonment of ten years and fine (Section 366A.) Importation of girls under 21 years of age from any country outside India for illicit intercourse is made punishable likewise (section 366B).

The Indian Merchant Shipping Act.—The first Indian Merchant Shipping Act was passed in 1835; since then it was amended from time to time by a number of Acts, the last one being of 1920. All these Acts are consolidated and united into one measure of legislation. As there is nothing characteristically new, the provisions of the new Act are not dealt with here.

The Makharoda and Goontia Villages Laws Act.—This is an administrative measure. In 1905, on the establishment of the province of Eastern Bengal and Assam, the District of Sambalpur (excepting the Chandarpur-Padampur Zemindari and the Phulihar Zemindari) was transferred from Central Provinces to Bengal; and the Calcutta High Court was given jurisdiction over the District. Later, when Bihar and Orissa were created into a separate province, Sambalpur was transferred there and in the constitution of the Patna High Court jurisdiction over Sambalpur District went over to that Court. Thus the Chandarpur-Padampur and Phulihar Zemindaries remained in the Central Provinces; similarly it was intended to retain the Makharoda Jaghir and Goontia villages in those provinces. This intention is now made clear by this enactment.

The Legal Practitioners (Women) Act.—Although both branches of the Legal profession were opened to women in England during the war-time, India lagged behind and clung to the time-worn prejudice. The Patna High Court actually refused admission as a pleader to Miss Hazra. Some time ago the Calcutta High Court did the same to a distinguished lady graduate in law; and some years ago the Bombay High Court similarly treated the application of Miss Sorabji. Section 3 of this Act opens out all the three branches of the legal profession in India to women. It always was so open in France and America.

The Indian States (Protection Against Disaffection) Act.—This Act has a history of its own. When it was first introduced in the Legislative Assembly, it was thrown out unceremoniously. Then in spite of opposition of some members, it was passed by a majority in the Council of State. The Governor-General then certified it under the powers reserved to him under section 67B of the Government of India Act and it received the assent of His Majesty in due course. The Act provides that if any person is found guilty of sedition against "any Prince or Chief of a State in India or the Government or the Administration established in any such State" he shall be sentenced to five years' imprisonment or fine or

both (section 8). No Court inferior to that of a Presidency Magistrate or a Magistrate of the First Class can try the case and that too on a complaint made under the authority of the Governor-General in Council (section 5).

The Mahendra Partab Singh Estates Act.—The property belonging to Kunwar Mahendra Partab Singh was attached under Regulation III of 1818; but the attachment permitted the Government merely to collect the rents, meeting the revenue and the cost of management and accumulating the net profits until the estate was released. This Act enables Government to vest in itself the interest of the offender, in order that it may subsequently regrant it to his minor son and his heirs under a Sanad. Pending the re-grant the estate will be managed by the Court of Wards in trust for the minor.

The Moorsheadabad Amendment Act.—The Indenture entered into by the Nawab of Murshedabad on March 12, 1891, and legalised by Murshedabad Act XV of 1891 prevents him from executing leases of any of his property for a term exceeding twenty-one years. The restriction is now relaxed and he can lease out his property for any term "provided the terms and conditions are approved by the Governor of Bengal in Council" (section 2).

The Code of Civil Procedure (Amendment) Act.—Under section 60 of the Code, when the salary of an employee is Rs. 20 the whole salary is exempt from attachment in execution of a decree against him; and Rs. 20 are so exempt when the salary exceeds Rs. 20 but does not exceed Rs. 40. Now all salaries under Rs. 40 are wholly exempt from attachment; and Rs. 40 are also exempt when a salary ranges from Rs. 40 to Rs. 80.

The Indian Income-Tax (Further Amendment) Act.—Section 4 of the Indian Income-Tax Act 1922 is now so amended that "Income received in or brought into British India" shall be deemed to have accrued in British India. A new Chapter VA is added with reference to certain classes of shipping. A new section 44A is added which levies tax on occasional shipping belonging to concerns whose principal place of business is not in British India and who have no regular agents in India from whom the tax could be levied (section 44A).

The Indigo Cess (Repealing) Act.—The Indigo Cess (Amendment) Act levied a cess of Rs. 1-8-0 per cwt. of indigo produced in India and exported, in order to meet expenses of research work in the interests of the indigo industry in India. The research work is now complete and the cess is removed.

The Civil Procedure Code (Amendment) Act.—A decree for restitution of conjugal rights could be enforced under Order XXXI, rule 1 "by the detention in the civil prison" also; this provision is now removed; and it can now only be enforced "by the attachment of his (defaulter's) property." Thus, the law is now made uniform both with regard to husband and wife; and neither can be imprisoned for failure to obey a decree for restitution of conjugal rights.

The Special Marriage (Amendment) Act.—Some years ago Mr. B. N. Basu proposed a bill

which broke through high fences of castes and creeds for purposes of marriage. It evoked a storm of opposition then and the bill had to be dropped. Before the embers of the controversy that raged then could die out, there arose from its ashes another bill framed by Mr. V. J. Patel, who left out the creeds and proposed breaking through different castes; that is, any Hindu can marry any other Hindu. It also provoked another storm and series of protest meetings throughout India. The second bill also came to grief. The provisions of the Special Marriage Act of 1872 are now applied to "Hindu, Buddhist, Sikh or Jaina religion." In other words the amendment now obviates the necessity of a declaration that the parties entering into a special marriage are not Hindus, Buddhists, Sikhs, etc. There are some novel features. A person entering into a special marriage, if a member of an undivided Hindu family, ceases *ipso facto* to be its member (section 22). Succession to his property is governed by the Indian Succession Act 1865 (section 24). He is not to have right of adoption (section 25). If his father has no other son the father can adopt another son (section 26).

The Indian Territorial and Auxiliary Forces (Amendment) Act.—Where a person whose period of service is about to expire under the Indian Territorial Force Act or the Auxiliary Force Act, commits a serious military offence, he can, although he ceases to belong to such force, still be tried by Military Court-Martial.

The Indian Lunacy (Amendment) Act.—If a person is once the subject of a reception order, taken to a mental hospital and discharged as cured, he still remains liable under the law as it stood to be sent to the mental Hospital any time during his life-time without a fresh reception order. This defect is now remedied, and a reception order now remains in operation only for 30 days from its date, or if acted upon, until the lunatic is discharged from the asylum.

The Indian Army (Amendment) Act.—The Indian Army Act is now made applicable to officers, warrant officers and non-commissioned officers of the Royal Air Force (section 2). A new section is added by which the report of a chemical analyser "which proved itself under section 510 of the Criminal Procedure Code, is also a proof by itself in the proceedings before a Court martial (section 91A). If a person tried by a Court martial is found to be insane, ample powers have been given to the Governor-General of India in Council to deal with him (section 103A).

The Cutchi Memons (Amendment) Act.—The Cutchi Memons Act XLVI of 1920 enabled a Cutchi Memon to take advantage of the Act and to permit himself and his descendants to be governed by the principles of Mahomedan law in matters of succession and inheritance. It is now enacted, that only a Cutchi Memon "(1) who has attained majority and (2) who is resident in British India" can take advantage of the Act (section 2). If the prescribed authority refuses to accept his declaration, he can appeal from the order, section 2 (2).

The Code of Criminal Procedure (Further Amendment) Act.—"Mukhtara" in the Bengal Presidency are made to undergo a test by the Calcutta High Court: and their license to practise is renewed from year to year. They were required in each case to obtain permission of the Court before they could file appearance on behalf of their client. This later disability is now removed and they can now appear as a matter of right.

The Indian Paper Currency (Amendment) Act.—The Government of India have now been empowered to issue currency notes to the extent of 12 crores of rupees in order to anticipate and prevent monetary stringency as a temporary measure; the additional issue so put into circulation to be automatically retired when the necessity ceases (section 4).

The Code of Criminal Procedure (Second Amendment) Act.—When an offender is sentenced to pay a fine which is not paid forthwith, the Court may order that the fine may be paid in full or in instalments within thirty days of the date of the order. The sentence on offender may be suspended and he may be released (section 388). Where a young person is convicted for the first time with theft, misappropriation, cheating or any offence not punishable with more than two years' imprisonment, can, instead of being sentenced be released "after due admonition" (section 562).

The Land Acquisition (Amendment) Act.—When any land is notified for compulsory acquisition under the Land Acquisition Act 1894, any person interested in the land may within 30 days of the notification object to the acquisition of the land. The objection shall be made in writing to the Collector, who shall give the objector an opportunity of being heard in person or by pleader, and shall ultimately submit a report to the local Government. The decision of the local Government shall be final (section 5A).

The Indian Ports (Amendment) Act
The increase in the use of oil as fuel on ships has necessitated certain precautionary measures in port limits. The Bombay Port Trust is authorised to regulate the manner in which oil or water mixed with oil shall be discharged in any such port and for the disposal of the same.

The Indian Electricity (Amendment) Act.—The amendment enables railway companies to remove trees not growing on their land which may come in the way of their aerial line.

The Charitable and Religious Trusts (Amendment) Act.—The powers which are hitherto exercisable under the Act by the District Courts alone can now be exercised by Subordinate Judges specially empowered in that behalf.

The Mussulman Wakf Act.—Every Mutuwalli is now obliged to furnish to the Court the following particulars relating to the Wakf; (1) description of Wakf property; (2) its gross annual income; (3) the gross income during five preceding years; (4) amount of Government revenue and cesses, and rents payable by the property; (5) estimate of expenses of realisation of income; and (6) the amount set apart for purposes of the Wakf (section 3). The particulars so furnished shall be duly published by the Court (section 4). The Mutuwalli has to submit annual accounts before June 30 in each year (section 5); which accounts would be audited under supervision of the Court (section 6). Any person can obtain copies of the statement of particulars under section 3 or 4; or any statement of accounts furnished under section 5 or any audit report made under section 6 (section 9). If any Mutuwalli gives false particulars or accounts he is liable to be fined in Rs. 500 on first conviction; and to a fine of Rs. 2,000 on each subsequent conviction (section 10).

The Indian Stamp (Amendment) Act.—The stamp duties on "share-certificates (Art. 19), letter of allotment of shares (Art. 36), letter of credit (Art. 37), proxies (Art. 52)" are enhanced from one anna to two annas (section 2). All promissory notes were hitherto stamped uniformly at one anna irrespective of the amount. Promissory notes payable on demand are now subjected to a telescopic scale of fees. All pro-notes under Rs. 250 in value remain leviable at one anna; when the amount exceeds Rs. 250 but does not exceed Rs. 1,000 a stamp duty of annas two is fixed. On higher amounts a uniform rate of four annas is levied. When promissory notes are payable otherwise than on demand, they are chargeable as bills of exchange.

The Botanical Survey is under the direction of the Superintendent of the Royal Botanic Garden, Calcutta, with whom are associated the Economic Botanists belonging to the Agricultural Department. In 1912 the post of Reporter on Economic Products was abolished and replaced by that of Economic Botanist to the Botanical Survey. Much of the systematic botanical work of India is done for the department by forest officers and others. Over 2,000 specimens were obtained in 1911-12 by the officer deputed to accompany the Abor Expedition as botanist, and a material addition was made to the information available as to the vegetation of the little-known frontier region traversed.

Geological Survey.—The first object of the Department is the preparation of a general geological map of India. Various economic investigations, which form an increasingly important part of the Department's work, are also conducted. These include investigation of marble and sandstone quarries for the purpose of building Imperial Delhi, the examination of the Korea coal-field in the Central Provinces, of petroliferous localities in the Punjab and North-West Frontier Province, of pitchblende areas in the Gaya District, &c.

Zoological Survey.—A scheme for the formation of a Zoological Survey on the basis of the Zoological and Anthropological Section of the Indian Museum, Calcutta, came into force in July, 1916. The proposals as sanctioned by the Secretary of State mainly are as follows:—The headquarters of the Survey will be the Indian Museum. The scheme regarding the Zoological Survey entails the breaking up of the organisation now known as the Zoological and Anthropological Section of the Indian Museum into two parts, one of which will become a Government department under the title of the Zoological Survey of India, and will be primarily concerned with zoological investigation and exercise such advisory functions as may be assigned to it by Government, while the other part will remain as the office of the Trustees of the Indian Museum and will be organised for the present on the lines laid down in the existing by-laws of the Museum. It will be the duty of the Zoological Survey to act as guardians of the standard zoological collection of the Indian Empire, and as such to give every assistance in their power both to officials and to others, in the identification of zoological specimens submitted to them, arranging, if requested to do so, to send collections to specialists abroad for identification in cases in which no specialist is available in India. The Director of the Survey is Dr. Anandale.

Mammal Survey.—The Survey was instituted in the year 1912 with the object of making as complete a study as possible of the occurrence and distribution of Mammals in India, Burma and Ceylon, and with the further object of supplementing the collection of Indian Mammals at the Bombay Natural History Society's Museum and at the British Museum as well as at the Natural History Museums in India, the primary object of the Survey being the furtherance of our knowledge of Indian Mammalian Fauna. Up to 1891 Naturalists in India had to rely for information on Dr. Jerdon's "Mammals of India" published in 1874. In 1884

R. A. Sterndale published his *Natural History of Indian Mammals* a purely popular work which did not add much to Jerdon's book. In 1881 a memorial prepared by Dr. Scater, Hon. Secretary to the Zoological Society and signed by Darwin, Hooker, Huxley, and other well known scientists, was presented to the Secretary of State for India. The memorial recommended that a series of Volumes dealing with the Fauna of India should be prepared and Dr. Blanford should be appointed its Editor. The memorial resulted in the publication in 1888-1890 of the Volume on Mammals in the "Fauna of British India" Series and since 1891 this volume has been the standard work on *Indian Mammals*. Blanford's book was however based on the information then available and the shortcomings of the book have been revealed in the light of more recent research. Further knowledge in regard to distribution and classification and the discoveries of new species have rendered Blanford practically obsolete.

To remedy this defect, at the instigation of the authorities of the British Museum, the Bombay Natural History Society decided to institute what is now known as the Mammal Survey. Mr. W. S. Millard, then Hon. Secretary of that Society, issued in an appeal to its members, to enable the Society to engage the services of trained European collectors so as to make a systematic collection of the mammals of India, Burma and Ceylon. The response to the appeal resulted in over a lakh of rupees being raised between 1911 and 1920, partly by subscriptions from the Society's members, contributions from Indian Princes, and grants from the Indian Government, the Government of Burma, Ceylon, Malay States, and the Provincial Governments. Subscriptions were also received from a few Learned Societies and Institutions in England and America. By the outbreak of the war the Survey had been carried on over large areas of the country, the districts covered being—in Western India a portion of Sind, the whole of Gujarat, Kutch and Kathiawar; the Southern Maharatta country and Kanara in Southern India; in Coorg and Mysore; in the centre large tracts of the Central Provinces and some districts of Bengal and Behar; in Northern India the Society's collectors had worked over Kumaon, Darjeeling and Sikkim and the Bhutan Duars. In Burma, collections were made along the Chindwin river, in Central Burma and in the Shan States, Pegu and a portion of Tenneserim. The whole of Ceylon was also systematically surveyed.

The material, which up to the outbreak of War comprised some 17,000 specimens, was forwarded to the British Museum where the collections were scientifically worked out by the late Mr. R. C. Wroughton, formerly Inspector General of Forests, Mr. Oldfield Thomas, F.R.S., Curator of Mammals at the British Museum, Mr. Martin C. Hinton and others. The results of their researches were published in a series of scientific papers in the journal of the Bombay Natural History Society. The enormous mass of material then collected resulted in the discovery of large numbers of new forms and species and by increasing our knowledge of the distribution of Indian Mammals has enabled the revision of Blanford's Mammals to be undertaken and early in 1921 the Secretary of

State for India commissioned Mr. R. C. Wroughton, since deceased, and Mr. M. C. Hinton to undertake the work.

At the beginning of the War certain important areas however remained to be worked, principally S. India, the Eastern Ghats, the Central Indian states and certain portions of Burma and the Mergui Archipelago. So when demobilisation rendered it possible the work of the Survey which had been in abeyance during the War was resumed and a collector was first sent to Assam, which has now been thoroughly worked. The Bombay Natural History Society's collectors are now in the Eastern Ghats and in Mergui, and it is hoped, if sufficient funds are forthcoming, to complete the work as originally conceived.

The Board of Scientific Advice.—This Board includes the heads of the Meteorological, Geological, Botanical, Forest, and Survey Departments, representatives of the Agricultural and Civil Veterinary Departments, and other scientific authorities whose special attainments may be useful. It was established in 1902 to co-ordinate official scientific inquiry, to ensure that research work is distributed to the best advantage, and to advise the Government of India in prosecuting practical research into those questions of economic or applied science on the solution of which the agricultural and industrial development of the country so largely depends. The programmes of investigation of the various departments are annually submitted to the Board for discussion and arrangement, and an annual report is published on the work done.

The Secretary to the Government of India (Department of Revenue and Agriculture) is *ex-officio* President of the Board which includes the Director-General of Observatories, the Director of the Zoological Survey, the Surveyor-General of India, the Principal, Punjab Veterinary College, the Director of the Indian Institute of Science, the Inspector-General of Forests, the Agricultural Adviser to the Government of India, the Director of the Geological Survey, the Director-General, Indian Medical Service, the Secretary to the Government of India, Public Works Department, and the Director of the Botanical Survey of India who is Secretary to the Board of Scientific Advice.

The Indian Research Fund.—Scientific research work is rapidly developing in India. In 1911 the sum of 5 lakhs (£33,000) out of the surplus opium revenue was set aside as an endowment for research into epidemic diseases in connection with the Central Research Institute, at Kasauli. It was hoped that this sum might be largely augmented by private subscriptions. An Indian Research Fund Association was constituted, and a good deal of work has already been undertaken. Its objects are defined as "the prosecution and assistance of research, the propagation of knowledge and experimental measures generally in connection with the causation, mode of spread and prevention of communicable diseases." Fresh investigations into kala azar and cholera have been inaugurated, and an officer was deputed, at the expense of the Fund, to study yellow fever in the regions where it is endemic, with a view to taking

steps to prevent its introduction into India. A further grant of 6 lakhs (£40,000) was made to the Central Research Fund from the opium surplus of 1911-12. It has been decided to devote to research and anti-malarial projects 5 lakhs (£33,000) a year from Imperial revenue commencing in 1913-14. A new periodical "The Indian Journal of Medical Research," was instituted in 1913 and is published four times annually, as the official organ of the Research Fund. The journal deals with every branch of research directly or indirectly connected with medical and sanitary science, and forms a record of what is being done in India for the advance of this work. In 1922 it was decided to devote the capital funds at the disposal of the Association to the erection of an Imperial Medical Research Institute and to the formation of a fund for its endowment.

Survey of India.—The work of the Survey of India Department falls under various heads, namely, the trigonometrical survey, topographical and forest surveys, special surveys and explorations, and map production. Cadastral surveys are now carried out by the Provincial Land Records and Settlement Departments.

In 1904 attention was drawn to the defective state of the **topographical survey maps**, and a Committee was appointed to report on the subject. To overtake the arrears of revisional survey and to secure that the map of India should be brought up to date and revised at proper intervals, they recommended a considerable increase of establishment and an increased expenditure of £210,000 a year for the next 25 years. They also made recommendations for altering the size and improving the quality of the maps. After further inquiry the Government of India decided that a scale of 1 inch to the mile would ordinarily be sufficient, reserved forests and special areas being surveyed on the scale of 2 inches to the mile, and the 1-inch scale employed for waste and barren tracts.

Indian Science Congress.

The Indian Science Congress was founded largely owing to the effects of Dr. J. L. Simonsen and Mr. P. S. Macmahon, the present Honorary General Secretaries of the Congress. The Asiatic Society of Bengal undertakes the management of the Congress finances and publishes annually the Proceedings of the Congress. The objects are (1) to encourage research and to make the results generally known among science workers in India, (2) to give opportunities for personal intercourse and scientific companionship and thus to overcome to some extent one of the chief drawbacks in the life of workers in science in India, (3) to promote public interest in science; for this end the Congress is held at different centres annually, and evening lectures open to the public form an important part of the proceedings of each Congress.

The Congress meets in January each year, the proceedings last for six days. The Head of the Local Government is Patron of the Congress; the Congress session is opened by a Presidential Address delivered for the President for the year. The President is chosen annually, the different sections being represented in turn. The sections are (1) Agriculture, (2) Physics and Mathematics, (3) Chemistry, and Applied Botany

(4) Zoology and Ethnography, (5) Botany, (6) Geology, (7) Medical Research. When the sections meet separately each section is presided over by its own President also chosen annually.

The mornings are devoted to the reading and discussion of the papers, the afternoons to social functions and visits to places of interests in the evening public lectures are delivered.

THE IMPERIAL INSTITUTE.

The Imperial Institute, South Kensington, has been placed by the Imperial Institute (Management) Act of 1916 under the control of the Secretary of State for the Colonies as representing the central authority for the Dominions, Colonies, and Protectorates of the Empire. The actual management of the Institute will be with an executive council of twenty-five members, which, subject to the general control of the Secretary of State for the Colonies, will possess considerable autonomy and will be the governing body of the Institute. India is to be represented on this council by four members, one nominated by the Government of India, two by the Secretary of State for India, and one by the Secretary of State for the Colonies. In addition, it is understood that there will be a special Indian Committee of the Council with co-opted members—an arrangement which will greatly increase the connection of the Institute with Indian interests and, it is hoped, will promote the development of those activities of the Institute for India which are most needed in England.

An account of the work done by the Institute for India, by Dr. W. R. Dunstan, Director of the Imperial Institute, has lately been published in the *Bulletin* of the Institute.

The Indian Collections of the Imperial Institute, which have been completely reorganised in recent years, constitute the Indian Section of the Public Exhibition Galleries. They include a representation of the important raw materials of India, illustrations of its chief industries and their results, tabular information and diagrams respecting Indian trade and commerce maps, pictures, and photographs

of its cities and industries.

Technical Information Bureau.—Ever since the Scientific and Technical Research Department was started, a most important part of its work has been, in addition to conducting researches, to collect and critically collate all published information respecting the production and industrial uses of raw materials, and it has gradually come to be recognized as a central clearing-house for information of this character. Merchants and manufacturers in England, as well as producers in India and the Colonies, have applied in increasing numbers for information on these subjects. In order to be in a position to deal more effectively with such enquiries, a special branch of the department was formed in 1914, whose business it is, in collaboration with the staff of the Scientific and Technical Research Department, to collect and distribute technical information. Since the war this branch, known as the Technical Information Bureau, has been very full of work, and has not only dealt with a large number of inquiries as to Indian materials and their possibilities, but has taken the initiative with British manufacturers and merchants in bringing to their notice important Indian materials which await a new market.

The Institute has a library and map rooms which are important auxiliaries to this work and publishes quarterly the *Bulletin* which has played a conspicuous part in making known throughout the Empire the results of researches conducted at the Institute, and the records of progress in the various aspects of the production and utilisation of commercial and economic materials.

Labour.

Various causes have combined to give added importance to the great group of human activities concentrated under the generic term of Labour. India is still a predominantly agricultural country and more than seventy per cent. of its people are dependent on the soil for their livelihood. Nevertheless a process of industrialisation has gone steadily forward. Calcutta and Bombay are great manufacturing cities. Whilst the jute mills dominate Calcutta and the cotton mills Bombay, there has grown up round these industries a substantial body of other manufactories. Another considerable manufacturing centre has developed at Cawnpore, with cotton, wool and leather factories. The textile industry of Bombay has overflowed into the mofussil, and Ahmedabad and Sholapore are considerable centres of manufacture, with a lesser one at Broach. In the Central Provinces the cotton mills of Nagpore are famous throughout India. The Province of Bihar and Orissa is the centre of the great coal mining trade, having absorbed the bulk of the coal mines formerly included in the Province of Bengal. It also embraces the most remarkable example of scientific industrialism in India in the works of the Tata Iron and Steel Company at Jamshedpur, where in what was jungle fifteen years ago a considerable city is springing up, which will produce over a million tons of steel a year, and house subsidiary industries which combined with the iron and steel works will probably maintain a city of a quarter of a million in the near future. The railway works of the North-Western Railway form the core of the industrialism of the Punjab, where other manufactories, notably of cement, are developing. The Governments of India are now each faced with a vivid and growing industrial question.

Social Consciousness.

Side by side with this industrialization there has grown an increased social consciousness of the responsibility of the community towards Labour. The Government of India passed its first Factory Act in 1881 and amended it in 1891. But experience showed that these Acts permitted considerable abuses and largely as the result of the agitation raised by *The Times of India* in Bombay in 1905 against the excessive hours worked in the Bombay textile mills inquiries were set afoot which resulted in the passing of a new Act which limited the hours of labour in 1911. With the constitution of the League of Nations, India as a signatory thereto became a participator in the decisions of the League on Labour questions. India was represented at the International La-

bour Conference held in Washington in 1919 and it became obligatory on her to enact legislation giving effect to the decisions of the Conference. Another International Labour Conference was held at Genoa in 1920 to consider a number of questions relating to seamen, such as the hours of labour, manning scales, accommodation, the provision for finding employment and other cognate questions and the Third and Fourth Sessions of the Conference were held at Geneva in 1921 and 1922. The Fifth Session of the Conference assembled on 22nd Oct. 1923 and dealt with only one item of importance—factory inspection. India was represented at all of these Conferences. In 1922 India was admitted as one of the eight countries of industrial importance after protracted examination of the grounds of her claim by experts appointed by the League of Nations. India, therefore, assumes responsibility for giving effect to the decisions of these Conferences. There has been a considerable extension of what is known as **Welfare Work**, and although this so far depends on the individual activities of employers or labour, the work is progressing well. Further there is the nascent Trade Union movement in India. This movement lies rather more on the surface than in deep roots, but it flares up in times of labour unrest and is nominally at all events focussed in The All India Trade Union Congress. The frequency of strikes, and the lack of any means to hasten a solution have given rise to careful investigation of the possibility of establishing Boards of Conciliation and Arbitration. In most industrial centres the housing question is one of great difficulty. It assumed its most acute form in Bombay City, where owing to industry being concentrated in a narrow island, where land is extremely dear, the provision of sanitary dwellings at a price within the means of the labourer, by private agency, was impossible. Much good work was done by the Improvement Trust, and by employers working with funds advanced by the Improvement Trust, but Government stepped in in 1921 with a scheme for the provision of accommodation for a quarter of a million under its own agency working through the Development Directorate. The programme for the year ended March 1923, provided for the completion of 60 chawls by 31st March 1923, against which the equivalent of 56 had been finished on that date. The total number of tenements let or ready to let on 31st March 1923 was 2,720. The last few years have therefore seen a remarkable change in the attitude of the State and the community towards Labour, which under the more democratic constitution which now obtains is assured of a hearing in the Legislatures.

LEGISLATION AND INSPECTION.

The conditions of factory labour until 1913 were regulated by the Indian Factories Act of 1881, as amended in 1891. The chief provisions of the amended Act were Local Governments were empowered to appoint inspectors of factories, and certifying surgeons to certify as to the age of children. A mid-day stoppage of work was prescribed in all fac-

tories, except those worked on an approved system of shifts, and Sunday labour was prohibited, subject to certain exceptions. The hours of employment for women were limited to 11, with intervals of rest amounting to at least an hour and a half; their employment between 8 p.m. and 5 a.m. was prohibited, as a general rule, except in factories worked

by shifts. The hours of work for children (defined as persons below the age of 14) were limited to seven, and their employment at night time was forbidden; children below the age of nine were not to be employed. Provision was made for the fencing of machinery and for the promulgation of rules as to water supply, ventilation, the prevention of overcrowding, etc.

Hours Fixed.

The next Factory Act was finally passed into law as Act XII of 1911.

The new Act extended the definition of "factory" so as to include seasonal factories working for less than four months in the year; shortened the hours within which children, and, as a general rule, women, may be employed, and further restricted the employment of women by night by allowing it only in the case of cotton-ginning and pressing factories. It also contained a number of new provisions for securing the health and safety of the operatives, making inspection more effective, and securing generally the better administration of the Act. The most important feature of the Act, however, was the introduction of a number of special provisions applicable only to textile factories. The report of the Factory Commission showed that excessive hours were not worked except in textile factories. The Act for the first time applied a statutory restriction to the hours of employment of adult males by laying down that, subject to certain exceptions, "no person shall be employed in any textile factory for more than twelve hours in any one day." It is also provided in the case of textile factories that no child may be employed for more than six hours in any one day, and that (subject to certain exceptions, among which are factories worked in accordance with an approved system of shifts) no person may be employed before 5-30 a.m. or after 7 p.m. (the new limits laid down generally for the employment of women and children).

The Act of 1922.

The acceptance by India of her obligation under the International Labour Conference of Washington in 1919 necessitated the further amendment of the Factory Act in 1922.

In the following pages it is intended to give the present law on the subject by combining the act of 1911 with that of 1922. The Amendment Act of 1922 came into force on 1st July 1922, and it extends to the whole of British India, including British Baluchistan and the Sonthal Parganas.

Hours of Employment.

Rest periods in factories.—In every factory there shall be fixed,—

- (a) for each person employed on each working day—
- (i) at intervals not exceeding six hours, periods of rest of not less than one hour, or
- (ii) at the request of the employees concerned, periods of rest of not less than half an hour each so arranged that, for each period of six hours' work done, there shall be periods of rest of not less than one hour's duration in all, and that no person shall work for more than five hours continuously, and

- (b) for each child working more than five and a half hours in any day, a period of rest of not less than half an hour.

(2) The period of rest under clause (b) shall be so fixed that no such child shall be required to work continuously for more than four hours.

Weekly Holiday.—No person shall be employed in any factory on a Sunday, unless—

- (a) he has had, or will have, a holiday for a whole day on one of the three days immediately preceding or succeeding the Sunday, and

- (b) the manager of the factory has previous to the Sunday or the substituted day, whichever is earlier, given notice to the Inspector of his intention so to employ the said person and of the day which is to be substituted and has at the same time affixed a notice to the same effect in the place mentioned in section 38.

Provided that no such substitution shall be made as will result in any person working for more than ten consecutive days without a holiday for a whole day.

Employment of Children.—With respect to the employment of children in factories the following provisions shall apply:—

- (a) no child shall be employed in any factory unless he is in possession of a certificate granted under section 7 or section 8 showing that he is not less than twelve years of age and is fit for employment in a factory and while at work carries either the certificate itself or a token giving reference to such certificate;
- (b) no child shall be employed in any factory before half-past five o'clock in the morning or after seven o'clock in the evening;
- (c) no child shall be employed in any factory for more than six hours in any one day.

Employment of Women.—With respect to the employment of women in factories the following provisions shall apply:—

- (a) no woman shall be employed in any factory before half-past five o'clock in the morning or after seven o'clock in the evening;
- (b) no woman shall be employed in any factory for more than eleven hours in any one day.

Prohibition of Employment of Persons in two Factories on Same Day.—No person shall employ, or permit to be employed, in any factory any woman or child or, save in such circumstances as may be prescribed, any other person whom he knows, or has reason to believe, to have already been employed on the same day in any other factory.

Hours of Employment to be fixed.—The manager of a factory shall fix specified hours for the employment of each person employed in such factory, and no person shall be employed except during such hours.

Limitation of Working Hours per Week.—No person shall be employed in a factory for more than sixty hours in any one week.

Limitation of Working Hours per Day.
—No person shall be employed in any factory for more than eleven hours in any one day.

Exceptions.

Where it is proved to the satisfaction of the Local Government—

- (a) that any class of work in a factory is in the nature of preparatory or complementary work which must necessarily be carried on outside the limits laid down for the general working of the factory; or
- (b) that the work of any class of workers is essentially intermittent; or
- (c) that there is in any class of factories any work which necessitates continuous production for technical reasons; or
- (d) that any class of factories supplies the public with articles of prime necessity which must be made or supplied every day; or
- (e) that in any class of factories the work performed by the exigencies of the trade or by its nature, cannot be carried on except at stated seasons or at times dependent on the irregular action of natural forces;

the Local Government may, subject to the control of the Governor-General in Council, by notification in the local official Gazette, exempt on such conditions, if any, as it may impose.

The system of inspection is being steadily improved by the appointment of more whole-time inspectors with good technical qualifications in the principal industrial centres.

Further legislation is contemplated dealing with other important issues. A Bill is in preparation for the registration and protection of Trades Unions and the Government of India hope to be able to introduce a Bill early in 1924.

The Government of India have also decided to repeal the Workmen's Breach of Contract Act of 1859 with effect from 1st April 1924.

THE INDIAN MINES ACT, 1923.—The Indian Mines Act, 1923, received the assent of the Governor-General on the 23rd February 1923. It extends to the whole of British India, including British Baluchistan and the Sonthal Parganas, and comes into force on the first day of July 1924. By this Act the definition of a mine was made clear, and the weekly hours of employment were limited to 60 hours for work above ground and 54 hours for work below ground.

CONCILIATION AND ARBITRATION.

Of recent years much attention has been paid to the settlement of industrial disputes. The baffling character of such disputes is that they are so often sporadic, breaking out without warning, grievances being formulated after striking instead of before. When such strikes occur there is no organised body of workers with whom to negotiate. The Government of Bengal took the leading part and in March 1921 appointed a committee which recommended Conciliation Boards and the appointment of a panel on which the Local Government could draw when constituting a board to enquire into any dispute. This Board has functioned usefully. The Bombay Government, which had already explored the ground informally, appointed a similar committee in November 1921, which reported in February 1922. As this Committee surveyed the position in some detail, and its report constitutes the latest contribution to the discussion, its recommendations are summarised because they reflect the existing situation and are applicable with modifications to suit local conditions, to most industrial centres in India. The valuable suggestions made by the Committee have been considered by the Government of Bombay, particularly in regard to Courts of Enquiry and Courts of conciliation. As stated in the Legislative Council on 14th March 1923, by the Honorable Sir Maurice Hayward, Home Member of Council, details are being worked out and as soon as Government are satisfied on these points legislation will be introduced as early as possible after the sanction of the Government of India has been obtained.

The Industrial Situation.

Industry in the Bombay Presidency is mainly confined to the three centres of Bombay, Ahmedabad and Sholapur with a factory population of some 200,000, 55,000 and 20,000, respectively.

Of the workers of Ahmedabad and Sholapur, 44,000 and 20,000, respectively, are dependent on the textile trade. Those in Bombay may be divided into—

- (1) Textile operatives.
- (2) Transportation service workers (including Railways and Docks).
- (3) Gas and electric light workers, municipal employees, Mint and Government Press workers, customs, postal, telegraph and telephone employees and inferior Government employees generally.

The Operatives.—The general body of this working population was accurately described by Mr. C. N. Wadia, C.I.E., in 1919, as "agriculturists first and agriculturists last." They come to Bombay—as a rule without their families—and work till they have funds enough to return to their villages. In the textile trade and amongst the general labourers almost all the operatives, except the "jobbers" and gangmen are of this migratory class. These remarks apply with almost equal force to the industrial population of Ahmedabad and Sholapur. In the workshop and in semi-clerical employment where skill or some education is required, there is however being formed a more permanent class of workmen who can almost speak of Bombay as their home. The standard of literacy is exceedingly low, not more than five per cent. of the operatives class being able to read and write their own vernaculars.

Characteristics of Strikes.—Certain characteristics are common to most of these strikes:—

- (a) The frequency of the strike without notice.
- (b) The absence of any clearly-defined grievance before striking.

- (c) The multiplicity and sometimes the extravagance of the claims put forward after the strike has begun.
- (d) The absence of any effective organisation (except perhaps at Ahmedabad) to formulate the claims of the operatives and to secure respect for any settlement which may be made.
- (e) The increasing solidarity of employers and employed and the capacity of the operatives to remain on strike for considerable periods despite the lack of any visible organisation.

The Prevention of Strikes.

Amongst the employers of labour there are strong organisations and the present tendency is for them to become more and more representative; but employers' associations have not yet evolved any standard scales of wages and individual employers are usually ignorant of how their rates compare with the wages given by others. The uncorrelated raising of wages in one factory is almost invariably seized upon as a grievance in other factories of the same class, and instances of strikes caused in this way are within the memory of all. The attempts made to standardise wages on a definite principle have hitherto been largely ineffective.

Trade Unions.—Amongst this heterogeneous labour force, there have in Bombay and Ahmedabad, gradually developed the beginnings of a Trade Union movement. In most cases the Unions are little more than strike committees consisting of a few officers and perhaps a few paying members around whom the rest rally in times of trouble. After work is resumed the union dwindles, and in most cases disappears. According to data published by the Labour office, Bombay, in the *Labour Gazette*, the number and membership of trade unions known to be actually in existence in the Bombay Presidency for the quarter ending September 1923 were as follows:—Bombay City and Island 8 unions with a membership of 23,913; Ahmedabad 7 unions with a membership of 10,549; and in other parts of the Presidency 4 unions with 7,184 members. The totals for the Presidency were, therefore, 19 unions with 41,646 members in September 1923 as compared with 23 unions and 52,776 members in September 1922.

The evolution of any means of preventing or adjusting strikes and trade disputes in such a floating and illiterate body, lacking any homogeneity, is exceedingly difficult and we put forward such recommendations as we make with full recognition of their indecisive character. In the forefront of these recommendations we place a wise and statesmanlike attitude towards the nascent Trade Union movement.

We are fully aware that the early days of a Trade Union movement are often full of difficulty. Strike committees arise calling themselves Trade Unions and demanding the privileges of Trade Unions without any means of discharging the responsibilities thereof. Sympathetic friends unconnected with the industry or any industry, and consequently knowing nothing of the special difficulties involved, spring into notoriety. Strike leaders

appear claiming the right to bargain but with no power to make the bargain respected. But these are the growing pains of Trade Unionism; it is far better to treat than to inflame them. We therefore express the very sincere hope that there will be, neither on the part of the state, nor of industry, any hostility to the free evolution of the Trade Union movement.

As soon as a genuine Trade Union organisation emerges it should be officially recognised as the channel of communication between employers and employed. We are strongly in favour of the compulsory registration of Trade Unions under a broad and generous Act. Such registration should ensure at least strict adherence to the elements essential to any substantial association of a definite code of rules, regular office bearers properly elected and an accurate register of subscribing members. But we are strongly opposed to conferring on Trade Unions any special privileges outside the ordinary law of the land or, on the other hand, any special responsibilities.

Most of our witnesses have agreed that Works Committees promise to discount that absence of personal relationship between operatives and employers, which is inevitable in large factories owing to the numbers of the men employed. We also agree that they may have an educative value among the operatives themselves.

Welfare Work.—Next to Works Committees we place the large group of humanistic activities known as Welfare work. Here we wish to make an explanation. We were greatly impressed by the evidence which declined to accept the term "Welfare" as accurately defining these energies and classed them as "efficiency" work, because they had such a direct reaction on the physical contentment and efficiency of the operatives, that economically they justified the expenditure thereon.

The Settlement of Industrial Disputes.

So far we have devoted our attention to a consideration of the means which will contribute to the prevention of industrial disputes; it remains to suggest the methods of settlement, when such disputes either develop irreconcilable differences between capital and labour or else become a menace to the community.

There are some who hold that the State has no right to intervene in industrial disputes. To that position we cannot subscribe.

But we are agreed that no outside agency, and in particular the agency of the State, should be used until all other means have been employed and failed, or unless it is invited by one or other of the parties to the dispute, or unless the situation is such that peace, order and good government are prejudiced. If such conditions should arise, then there should be formed an Industrial Court of Inquiry, to be followed, if necessary, by an Industrial Court of Conciliation. We deliberately place the function of inquiry first and separate from the role of conciliation, for we desire to avoid the facile opportunism which seeks to patch up an industrial dispute by proposing a compromise between the views of the two parties without going down to the economic principles which are at stake.

Constitution of the Court.—The constitution of the Court should be as follows:—

- (a) A chairman selected by the members of the Court from a panel maintained in the Labour Office;
- (b) Three members representing the employers in the industry concerned;
- (c) Three members representing the operatives in the industry concerned.

A bare majority of our number is of opinion that the public should not be represented on a Court dealing with an industrial dispute, but should be represented when the Court is inquiring into a dispute affecting a Government Department or a public utility company or corporation. Whilst we are divided on this point, we are unanimous in the conclusion, that when a Government Department, or public utility company, or corporation is concerned in an industrial dispute demanding the constitution of an Industrial Court the general public should be represented in

equal proportion to the parties directly concerned. The constitution of such a Court would then be:—

- (i) A chairman chosen from the panel.
- (ii) Three representatives of the Government Department, or public utility company or corporation concerned.
- (iii) Three representatives of the operatives.
- (iv) Three representatives of the general public.

The special reasons which have induced us to recommend the representation of the general public in such cases, are that the whole cost of any increase in wages is at once passed on to the public either in increased charges for an essential public service or else in a diminished revenue to the State, which is taxation in another form. We recommend that the representatives of the general public should be selected from the panel of Chairmen.

OFFICIAL ORGANISATION.

When the importance of the labour movement forced itself on the attention of the Government it was found necessary to establish an organisation to deal with it. There was created with the Government of India a Labour Bureau, which collects information on Labour conditions, keeps in touch with Labour organisations in other countries, and systematically gathers statistics regarding strikes, lock-outs, wages and cost of living. Several of the Local Governments have set up special machinery for dealing with Labour issues, and there are Labour officers with the Governments of Bengal and Madras whilst the Bombay Government, on the advice of the informal committee whose recommendations have been mentioned above, constituted a special Labour Office in the Secretariat.

In a resolution of Government in the Home Department, dated 29th April 1921, the functions of the Labour Office were set out as follows:—

(i) **LABOUR STATISTICS AND INTELLIGENCE.**—These relate to the conditions under which labour works and include information relating to the cost of living, wages, hours of labour, family budgets, strikes and lock-outs, and similar matters;

(ii) **INDUSTRIAL DISPUTES.**—As experience and knowledge are gained and the activities of the Labour Office develop, it will promote the settlement of industrial disputes when these arise; and

(iii) **LEGISLATION AND OTHER MATTERS RELATING TO LABOUR.**—The Labour Office will

advise Government from time to time as regards necessary new legislation or the amendment of existing laws. The Labour office publishes a monthly journal entitled the *Labour Gazette* which is a journal for the use of all interested in obtaining prompt and accurate information on matters specially affecting labour in India and abroad. The address of the Labour office is:—

The Old Custom House,

Mint Road, Bombay,

Director—Mr. G. Findlay Shirras, M.A.,

F.S.S. (Hony), J.P., I.E.S., M.L.C.

LABOUR ASSOCIATIONS.

ALL-INDIA TRADE UNION CONGRESS.

President—Joseph Baptista, B.A., LL.B.,

Bar-at-Law,

Mathar Packady, Mazgaon, Bombay.

General Secretary—D. Chaman Lal,

16, Mozang Road, Lahore.

CENTRAL LABOUR BOARD FOR BOMBAY.

President—F. J. Ghawalla, B.A.

123, Esplanade Road, Fort, Bombay.

Secretary—S. H. Jhabwalla, B.A.,

123, Esplanade Road, Fort, Bombay.

The names and addresses of the officials of other trade unions in the Bombay Presidency are published regularly every quarter by the Labour office in the *Labour Gazette*.

WAGES.

There is much discussion, with no very definite conclusions, as to whether wages have kept pace with the cost of living. Conditions vary so markedly between Province and Province that

it is difficult to give exact figures, but the following table, applicable to the Bombay Presidency, shows that the increase in real wages has been considerable.

Index numbers showing the increase in the cost of living, nominal and real wages.
July 1914=100.

Descriptions.	APRIL 1922.		
	Cost of Living.	Nominal Wages.	Real Wages.
WORKERS IN THE TEXTILE INDUSTRY—(a).			
<i>Men.</i>			
Mill operatives (Process workers)—			
Time workers	162	189	117
Piece workers (b)	162	174	108
Power house and maintenance staff (Engine room and mechanics)	162	183	113
Miscellaneous Departments—			
Stores and Godown	162	166	103
Ramosees or Sepoy Dept. and odd hands	162	204	126
Mill or Factory clerks	162	192	119
<i>Women.</i>			
Mill Operatives (Process workers)—			
Time workers	162	159	99
Piece workers	162	169	105
Mill sweepers, pickers, waste sorters, female coolies	162	187	116
<i>Big Lads and Children.</i>			
Fulltime	162	180	112
Half time	162	185	115
<i>Peons in the Secretariat Departments.</i>			
Nalk (I class)	162	194	120
" (II ")	162	200	123
Peons (I grade)	162	215	133
" (II ")	162	224	138
" (III ")	162	235	145

(a) The figures relate to May 1921 and there has been no change in the rate since.

(b) Mainly weavers.

WORKMEN'S COMPENSATION.

The Workmen's Compensation Act of 1923 received the assent of the Governor-General on the 5th March 1923. The Act extends to the whole of British India including British Baluchistan and the Southall Parganas and will come into force on the first day of July 1924. It contains two distinct parts Chapter II which lies outside the general scheme for compensation, contains provisions modifying the ordinary law in respect of employers' liability and making it easier for injured workmen to sue their employers for damages in the Civil Courts. These clauses apply only to workmen, who come under the workmen's compensation provisions, so that, although they omit the limit to damages which governs their counterpart in England, they are not likely to be much used. Ten classes of workmen are covered by the bill. Some of these, such as members of fire brigades, telegraph and telephone linemen, sewage workers and tramwaymen, are small, and as the definition of seaman is limited to those employed on certain inland vessels, only a very small proportion of Indian seamen will benefit by the bill. The five important classes are the workers in factories, mines, docks and on railways, practically all of whom are included, and those engaged in certain types of building work, notably the construction of industrial and commercial buildings, and any other buildings which run

to more than one storey. The most important classes excluded altogether are agricultural workers and domestic servants. Non-manual labourers getting more than Rs. 300 a month are excluded, except on the railways. Power is taken to include other hazardous occupations by notification from time to time. Compensation is to be given, as in the English Act, for personal injury by accident arising out of and in the course of employment. It is also to be given for diseases in certain cases. The provisions for diseases have been so framed that if a certain class of workman contracts a scheduled disease, it will usually be extremely difficult for the employer to defeat a claim for compensation. On the other hand, other workmen will find it equally difficult to get compensation for disease, as they will have to prove that the disease arises "solely and directly" from the employment. The diseases scheduled at present are anthrax, lead poisoning and phosphorus poisoning, but the list is made capable of extension.

Scales.—The scales for compensation are more generous in every way than those originally suggested by Government; they are based on the unanimous recommendation of a Committee which met in June. Adults (i.e., persons over 15) and minors are distinguished throughout and compensation is subject to upper limits in every case. For death the relatives receive 30

months' wages of the deceased workman, subject to a maximum of Rs. 2,500 if he was an adult. For a minor who is killed, the compensation payable is the fixed sum of Rs. 200. If a workman is completely disabled for life, he gets 42 months' wages if he is an adult and 84 months' wages if he is a minor, subject in each case to a maximum of Rs. 3,500. If he sustains permanent injuries that do not completely disable him, he gets proportions of the above sums, and for certain clearly recognizable injuries, like the loss of limb, these proportions are specific. Thus a workman, who lost his right arm below the elbow would receive 60 per cent. of the sums specified above, subject to a maximum of Rs. 2,100. If his pay was Rs. 30 monthly, the sum would come to Rs. 756. All these payments are lump sums. Of much greater importance are the provisions for the minor and more common injuries. Statistics based on experience of industry generally in other countries indicate that 50 per cent. of injuries from accidents cause disablement for not more than ten days, 44 per cent. cause disablement lasting more than 10 days, but ultimately disappearing, 5 per cent. result in permanent injuries and 1 per cent. end fatally. A large proportion of cases will be excluded by the provision that no compensation is to be paid on account of the first ten days of disablement. The great majority of the remaining cases will fall under the scale for temporary disablement. The rate of payment for temporary disablement is half wages for adults and two-thirds wages for minors, subject to a maximum of seven years, and for minors, two-thirds wages or whole monthly wages after they have attained the age of 15 years, subject in each case to a maximum amount of Rs. 30, and to a maximum period of 5 years. This maximum of 5 years is not of great importance, as experience shows that the number of

such cases which last more than six months is insignificant. During the first six months of these payments they can only be commuted to a lump sum if both parties agree; after payments have gone on for six months, either party can apply for commutation. In its treatment of the difficult question of dependents the Indian bill allows only husbands and wives, parents and minor children to claim compensation, and it makes the compensation a fixed sum independent of the number of those relations. The administration of the Act and the settlement of disputes is entrusted to special Commissioners, with a very simple procedure wide powers and restricted opportunities for appeals. The successful operation of the act depends largely upon the choice of suitable officers as Commissioners. All local Governments and administrations have, therefore, been addressed by the Government of India to consider the question of the appointment of Commissioners under Section 20 (1) of the Act.

Wages.—Last year the Labour office published a "Report on an enquiry into the wages and hours of labour in the cotton mill industry in the Bombay Presidency." This year another report dealing with wages in agriculture is under publication. This Report deals with the rise of agricultural wages from 1900 to 1922 year by year and district by district for urban areas and rural areas, and shows the daily average wages for three principal classes of agricultural labour by divisions and economic circles. The following table gives the index numbers of daily average wages of skilled labourers, ordinary labourers and field labourers for the Presidency for the years 1913, 1921 and 1922 with 1900 as the base. The index numbers of retail prices of the six principal foodgrains are also shown side by side for purposes of comparison.

Years	Index numbers of nominal wages.			Index numbers of retail prices of foodgrains.* (weighted avgs.).
	Field labour.	Ordinary labour.	Skilled labour.	
1900	100	100	100	131
1913	158	147	128	123
1921	283	271	230	247
1922	300	282	249	..

* Six principal foodgrains (*e.g.*) Rice, Wheat, Jowar, Bajri, Gram and Turdal have been taken. The quinquennial average 1900-04 has been taken as the base.

It is particularly noticeable that the wages of field labourers show increases larger than the increases in the wages of ordinary and skilled labourers. This is due, not only to the drain of labour from agriculture to industry, but also to the dearth created on account of the ravages

of the various epidemics that have swept over the country during the last quarter of a century. It is interesting to note that wages have kept pace with the increase in the prices of the six principal foodgrains.

Bombay Development Scheme.

The Bombay Development Scheme in its widest sense represents concerted attempts by the three local bodies, the Municipality, the City Improvement Trust and the Port Trust, each working in its own sphere, and by the Government, to secure the rapid and adequate development of the city.

The Municipality is developing various areas in the city which will result in providing increased residential and business accommodation. The Mahim scheme will provide two main avenues running north to south, in addition to the 60 feet road from Worli to Mahim Bazar, now practically completed, and a large number of cross roads. It aims at the development of an area in which it may be possible to house, approximately, a population of 250,000. Provision has been made for a central park with a frontage on the bay and for a smaller park near the southern end of the area. The main contribution of the Municipality, however, towards the general development scheme lies in the great water and drainage projects which it is undertaking and which are essential for the health and well-being of the city.

Improvement Trust.—The Improvement Trust are developing the north of the Island on a large scale and at a rapid pace, completing their old schemes, Dadar-Matunga and Sion-Matunga, and pressing on with the new schemes adopted in 1919, the total area of which amounts to about one-ninth of the area of the whole Island. Of the latter, the Worli scheme will provide for three classes of people, the richer class on the sea face, the middle class on the main road, and very large areas for the working classes on the land which is now being reclaimed in the neighbourhood of the mills. At Dharavi the land now occupied by the tanneries and the swamps to the south will be converted into a salubrious garden suburb, including a large amount of accommodation for the working classes. The Sewri-Wadalla scheme is intended almost entirely for the working and lower middle classes, and the area included in it will, when the contemplated railway connections are made, be within easy access by rail from Victoria Terminus.

Port Trust.—The Port Trust is completing the preparation of a scheme for a great expansion of the docks, the new docks to be located on the south-west corner of Trombay. The construction of the new cotton depot on the Mazgaon-Sewri reclamation is being pushed on as rapidly as possible, which will release for other purposes the ground now occupied by the Cotton Green.

Programme.—The works which Government propose to carry out themselves are as follows:—

(a) The provision of at least 50,000 one room tenements for the working classes, to meet an actual existing shortage of accommodation as reported by the Municipal Commissioner in 1919.

(b) The Back Bay and East Colaba Reclamation, to reduce congestion in the business

area and provide residential accommodation and open spaces in the south of the City.

(c) The development of South Salsette, including Trombay, partly for residential and partly for industrial purposes.

(d) The provision of other industrial areas at greater distances.

(e) The improvement of communications to the suburban areas.

(f) The improvement of the supply and transport of building materials.

The question of special measures for the development of Bombay has been under the consideration of Government for many years. The results of the last general survey of the subject are contained in the report of the Bombay Development Committee submitted in May 1914. The war made it impossible then to carry out any large schemes as to formulate a definite policy. And when the war had come to an end, it was found that owing to the large increase in the City's population during the war, and the high prices of materials, conditions were much worse than before, and that more rapid and more drastic action was necessary.

Scope of Work.—In a speech to the Legislative Council in August 1920, His Excellency the Governor explained that the industrial housing scheme, which Government considered essential, would be carried out by them direct, instead of being entrusted to the Municipality or the Improvement Trust, because of the very heavy liabilities which already rested on those bodies. He introduced a Bill for the levy of a cess of one rupee per bale on cotton imported into Bombay, the proceeds of which would be used partly to provide additional revenue for the Municipality in view of its large programme of expenditure, partly to meet the loss anticipated on the housing scheme, and partly to assist development schemes in Salsette.

He announced Government's decision to establish a new Development Department, and Directorate, which would be at once a department of Government, detached as far as possible from the ordinary Secretariat, and an executive organisation, and defined its duties as under:—

(a) To carry out the Back Bay Reclamation Scheme and any other reclamation schemes which may be found necessary in or near Bombay City.

(b) To undertake the industrial housing scheme of 50,000 one-roomed tenements for the working classes in Bombay.

(c) To organise systematically the supply of building materials for its own work and for the works with which it is connected.

(d) To take over all questions relating to the acquisition of land in Bombay City and all questions regarding the utilisation of Government land.

(e) To carry out large schemes for the systematic development of Salsette.—

(i) by town planning schemes to be carried out by local authorities, and

(ii) by the purchase of areas outright with a view to resale after development.

(f) To secure an adequate water supply for the whole of Salsette when it is developed as an urban area.

(g) To deal with the supply and distribution of electrical energy, both for domestic and industrial purposes in the area outside Bombay.

(h) To take up the question of the improvement of communications to link up Bombay City with the areas to be developed in Salsette and Trombay.

He stated also that, in view of the magnitude of the schemes to be undertaken simultaneously by Government and the local bodies, Government had decided that the finance of the whole scheme should be pooled, that they should lend their credit to the local bodies, and appeal to the public for the money required by them as well as by Government themselves. The result of this decision was the Bombay Development Loan of 1920, the subscriptions to which amounted to Rs. 939 lakhs in round figures. Of this amount, Rs. 695 lakhs were lent to the local bodies, the balance being retained by Government. Further loans aggregating Rs. 246½ lakhs (including a temporary loan of Rs. 12 lakhs to the Municipality for the Mahim Scheme) have been made to the local bodies out of a sum of Rs. 480 lakhs which the Government of India decided in 1921 to advance to the Government of Bombay for development purposes.

Personnel.—The whole Development Department, including the Directorate, is in charge of the Hon'ble Mr. Cowasjee Jahangir, C.I.E., O.B.E., as General Member of Council. The Director of Development is in charge of the executive organisation and staff, subject to the orders of Government. The Deputy Director, in addition to assisting the Director in executive matters, is Secretary to Government in the Development Department, and also Commissioner for the Bombay Suburban Division, which includes the areas in Salsette and the Ambarnath taluka, in which development schemes are being carried out.

The Back Bay Reclamation works and the East Colaba Reclamation Project are in charge of a Chief Engineer (under the Director), assisted by three Deputy Chief Engineers, one at the Quarry near Kandivlee Station from which materials for the wall are being obtained, one at Marine Lines and one at Colaba, at either end of the seawall. This branch is detached from the remainder of the engineering staff.

For development works other than the reclamation, the Director is Chief Engineer, and is assisted by four Superintending Engineers. One is in charge of industrial housing, one of development works in Salsette, one of the Salsette Trombay Railway Scheme, and the industrial area beyond Kalyan, and one of questions relating to the supply and transport of materials.

The appointment of Salsette Development Officer, created many years ago, has been absorbed in the Directorate, and the holder of it is also Collector of the Suburban District, and in charge of the staff employed on the acquisition of land in the suburban area. There is a Land Manager, who is employed on valuations, the preparation of details of schemes, negotiations with land owners, etc. As the existing land revenue survey is not nearly accurate enough for land to be developed as an Urban area, a Superintendent of Suburban survey was appointed to make a survey on the general lines of the Bombay City survey. The survey has almost been completed.

The Government of India have appointed a special Audit Officer for the Bombay Development Scheme, and have authorised his appointment as Deputy Financial Adviser, and the appointment of the Deputy Controller of Currency as Financial Adviser to the Development Department.

SIR LAWLESS HEPPEL, Kt.—Director of Development.

J. R. MARTIN, C. I. E., I. C. S., Deputy Director of Development, Secretary to Government, Development Department, and Commissioner, Bombay Suburban Division.

H. ST. C. SMITH, Deputy Secretary to Government, Development Department, Secretary to the Development Directorate, and Assistant to the Commissioner, Bombay Suburban Division.

LL. W. LEWIS, C.I.E., M.I.C.E., Chief Engineer, Reclamation Branch.

G. M. O'RORKE, C.I.E., M.B.E., Senior Deputy Chief Engineer, Reclamation Branch.

H. A. ELGER, M.I.C.E., Junior Deputy Chief Engineer, Reclamation Branch.

P. BILLINGTON, Junior Deputy Chief Engineer, Reclamation Branch.

W. H. THOMAS, A.C.G.I., A.M.I.C.E., Executive Engineer, Projects.

W. F. ANDERSON, Executive Engineer, Reclamation Branch.

F. HARVEY, M.Sc., M.I.C.E., Superintending Engineer, No. 1—Project Division (on leave).

A. HAMID, F. Sc. (Acting).

N. L. MEHTA, B. Sc. (London), D. Sc. (Paris), Executive Engineer, Bombay Housing District No. 1.

D. R. H. BROWN, O.B.E., A.K.C., Superintending Engineer, No. 2—Project Division.

D. K. BHAVE, L.C.E., M.A., B. Sc., A.M.I.N.S.T. C.E., A.M.I.Mech.E., Executive Engineer, Andheri.

T. S. SOORMA, B. E., Executive Engineer, Suburban Sanitary District.

G. W. T. SQUIRES, Executive Engineer, Kurla, Trombay District.

A. F. MACDONALD CLARK, M.A., B.Sc., M.I.C.E., Superintending Engineer, No. 3—Project Division.

A. LENNOX STANTON, M.I.E. (India), M.A.M.S., M.E., A.M.I.M.E., A.M.I.E.E., Electrical and Mechanical Engineer.

T. A. PEREIRA, Executive Engineer, Central Salsette Railway.

E. F. SYKES, M.I.C.E., Superintending Engineer, No. 4—Project Division.

W. K. CALDWELL, Executive Engineer, Mechanical District.

J. R. COLABAWALLA, M. Soc.E. (Lond.) A. M. I.E., (India), A.A.M., I.E.E., Executive Engineer, Materials District.

W. J. NEWLAND, Superintendent, Bombay Suburban Survey.

CAPTAIN E. M. GILBERT LODGE, F.S.I., F.I.A., F.A.I., Land Manager, Development Directorate.

G. E. L. CARTER, I.C.S., Collector, Bombay Suburban District and Salsette Development Officer.

Audit and Finance.

A. V. V., AIYAR, B.A., C.I.E., Financial Adviser to Government.

T. R. V. SARMA, Deputy Financial Adviser to Government and Audit Officer, Bombay Development Scheme.

Military Lands Scheme.

Colonel R. ST. J. GILLESPIE, C.I.E., O.B.E., Secretary, Board of Control and Chief Engineer.

Major A. H. C. Trench, C.I.E., R.E., M.I.E.E., Deputy Chief Engineer.

Housing.—In Bombay City, apart from certain petty schemes affecting Government properties, the work of the Directorate consists at present of industrial housing and the Back Bay Reclamation. Three housing schemes are in progress, at Naigaum, DeLisle Road and Worli. The Naigaum scheme provides for 42 chawls, DeLisle Road for 33 and Worli for 121 to be increased to about 163 if sufficient additional land can be obtained from the Improvement Trust. All the chawls are to contain 80 tenements. Over 2,000 rooms are already occupied, and as the chawls become available no difficulty has been met in securing tenants. The average economic rent of the chawls works out at Rs. 14-8-0 per tenement per mensem, and Government have fixed the minimum rent for the present at an average of Rs. 10. On this basis there is a loss of Rs. 54 per tenement per annum which is being met by the cotton cess.

Reclamation.—As regards Back Bay the quarry has been equipped for a continuous output of 2,000 tons a day, the product varying from crushed stone and ordinary rubble to blocks weighing up to 10 tons. There is through railway communication to the Marine Lines section, and this has been extended to the Colaba section. At Marine Lines 5,100 feet of the wall, mass concrete on a rubble bank, have been completed, and the first section of the wall at Colaba, 2,000 feet of mass concrete built directly on the reef is completed. The remainder of the wall at the Colaba end will consist of mass concrete built on a rubble mound, as at Marine Lines. 4,000 feet of this rubble mound has been com-

pleted and the extension of the concrete wall is in progress. A cross wall, to form the first compartment for filling, is being made at Colaba and the filling was commenced, both at Colaba and Marine Lines, in the 1923-24 working season.

Salsette.—In Salsette a large part of the Bandra-Ghodbunder road up to Andheri has been widened, quarrying and reclamation works have been carried out at Gilbert Hill, Andheri, and progress has been made with works in several town planning schemes, including a road to Juhu island. The development scheme at Khar between the proposed Khar station and the sea, and a small scheme at Chapel Road, Bandra, have been worked out in detail. These provide for 863 and 166 building plots respectively. As a result of arrangements made with previous owners and Co-operative Societies, a considerable amount of land in both schemes has been disposed of, and the construction of roads in Khar is in progress. Only preliminary work has been done on the large scheme, Sahar, for the area lying between the G. I. P. and B.B. & C.I. Railways. Detailed plans have been worked out for considerable areas adjoining Santa Cruz and Andheri stations. A detailed contour survey of the Kurla-Kirol industrial area has been completed and the layout of roads, factories, &c., has been designed and construction is proposed to be commenced shortly.

In Trombay there are 3 large schemes, Trombay North-East is intended to provide for (a) a new municipal slaughter-house, tanneries, dyeworks and other noxious trades which ought to be removed from the City; (b) a separate area for milch-cattle stables; (c) residential areas for the people employed in the tanneries, etc. Trombay North-West is intended to provide a residential area for the lower middle class on good land surrounding on 3 sides the existing Chembur village and extending to the south and east. The development of Trombay West will depend on the detailed proposals of the Port Trust as regards the new docks.

In Trombay North-West, which is intended to be a residential area, the development of a gross area of 570 acres, to provide over 3,100 building plots, has been worked out in detail and work on the roads has been commenced. This new estate will have railway access to Bombay from a new station to be opened temporarily on the Municipal line from Kurla Station. A detailed survey for the conversion of the first part of this line into a regular railway and its extension to Trombay has been carried out by the G. I. P. Railway. Estimates have been sanctioned, and the earth work is in progress. The preparation of the tannery area, a small part of which requires filling, has been completed.

The construction of the Salsette-Trombay Railway, to run from Pir Pau to Kurla and then through the Sahar Scheme lying between the G.I.P. and B.B. & C.I. Railways to Andheri, has been put in hand. The total length of the line is 10·4 miles, of which 5·8 miles towards Andheri and 2 miles towards Vadauli both from Kurla, are under construction. The line towards Andheri has been practically completed for about 5 miles and the permanent way laid. The work on the rest of the line is well in hand.

Industrial Town.—The development of the Ambernath Industrial Area showed marked progress during the year. The scheme aims at creating a new township to establish industries with all modern facilities. Out of the three factories which were in construction last year, two have been completed, and have started working. One is a chemical factory, the second one of its kind in the Presidency, and the other a leather cloth factory. The woollen mills are nearing completion. Water supply to these factories is obtained from a temporary water installation situated about a mile away from the railway station. Housing for the superior staff of these factories is being provided on the area south-east of the Railway station. A scheme of roads and buildings on this housing area is in hand. The roads connecting the factories with the main road have been completed. A temporary bazaar to serve the residents of the area has been provided. This will have its own water supply from the temporary water installation. A power house for electric supply is to be constructed and the work will be put in hand shortly.

Storm-water drainage for the protection of the mill area has been completed. The survey for railway sidings in the area is completed and work is to be commenced shortly. A temporary goods ramp has been built by the G.I.P. Railway to provide unloading facilities.

The main water scheme is located at Badlapur, 5 miles from Ambernath Station. The works comprise—(a) A barrage across the Uthas River about 1½ miles from the railway station which has been completed. (b) A set of Paterson rapid filter to filter 3 million gallons of water. (c) Protection wall for the Uthas left bank. The two latter works will be finished during the next year. The earthwork for the 18" pumping main is ready and the main itself has been laid. It will connect the pump house near the barrage with a reservoir to hold 3 million gallons of water now being erected on a hill two miles away from the pumping station. The earthwork for the delivery main from the reservoir to the Ambernath area has been completed and the laying of the delivery main itself will shortly be finished. It is expected that water will be available in the area from the new supply by May 1924. A special local train service was inaugurated during the year between Badlapur and Kalyan.

Supplies.—As regards materials, arrangements have been made with a group of Indian Companies for the supply of all the cement likely to be required by the Development Directorate for 10 years, the local bodies in Bombay having an option of participating, if they wish to do so. No single source of supply of sand and shingle, in adequate quantities and of suitable qualities, has been found. Additional

sidings have been constructed at Mumbra, the principal place of supply at present. A suitable dredging plant for getting shingle and sand from the river beds has been ordered. Surveys have been made of other sources, and estimates for construction of sidings at the most promising of these are being prepared. Railway sidings from Mahaluxmi to the Worli Housing site and from Lower Parel to the DeLisle Road site, for the transport of materials, have been constructed. A depot has been established and sidings are completed at Matunga. These sidings will be used for materials required on development schemes in Bombay not accessible by rail, and facilities can be given to the public engaged in building in the north of the Island. A small fleet of steam wagons and trailers has been provided for the transport of materials, and in connection with the proposed development of Salsette and Trombay, small workshops capable of expansion as required have been erected near Kolkalyan and Wadavli near Chembur.

Military Lands.—Arrangements have been made with the Government of India involving the relinquishment by the military authorities of practically all the land they hold in the Fort area. The services displaced are to be reinstated partly at Deolali and partly at Colaba, where the military area is to be increased by about 265 acres at the southern end of the Back Bay Reclamation. The Government of India have to pay the Government of Bombay for this land, and this payment and the cost of new buildings, etc., due to the removal of the military from the Fort are to be covered by the sale of the land to be vacated. A large area of land on the Palton Road Estate (formerly the old Palton Road Lines) has been sold to the Bombay Municipality. A few plots on the estate and another in Carnac Road have also been sold, and the remainder of the Palton Road estate will be placed on the market when the Bombay Municipality has completed the roads. New Indian Infantry lines at Carnegy lines are completed, and new Infantry lines at Deolali, and the motor transport depot at Colaba are being commenced. The Bombay Military Lands Scheme is in charge of a Board of Control, consisting of the Director of Development and the General Officer Commanding, Bombay District. The Audit Officer, Bombay Development Scheme, is also Financial Adviser and Audit Officer for the Military Scheme. The staff employed on this scheme do not form part of the Development Directorate, but work in the same building, and in conjunction with the Directorate. As military land becomes ready for disposal, it is handed over by the military authorities to the Bombay Government, and action in regard to its disposal is taken by the Development Directorate under the orders of Government.

Manners and Customs.

Next to the complexion of the people, which varies from fair to black, the tourist's attention in India is drawn by their dress and personal decoration. In its simplest form a Hindu's dress consists of a piece of cloth round the loins. Many an ascetic, who regards dress as a luxury, wears nothing more, and he would dispense with even so much if the police allowed him to. The Mahomedan always covers his legs, generally with trousers, sometimes with a piece of cloth tied round the waist and reaching to the ankles. Hill men and women, who at one time wore a few leaves before and behind and were totally innocent of clothing, do not appear to-day within the precincts of civilisation and will not meet the tourist's eye. Children, either absolutely nude or with a piece of metal hanging from the waist in front, may be seen in the streets in the most advanced cities, and in the homes of the rich. The child Krishna, with all the jewels on his person, is nude in his pictures and images.

Dress.—The next stage in the evolution of the Hindu dress brings the loincloth nearly down to the feet. On the Malabar coast, as in Burma, the ends are left loose in front. In the greater part of India, they are tucked up behind—a fashion which is supposed to befit the warrior, or one end is gathered up in folds before and the other tucked up behind. The simplest dress for the trunk is a scarf thrown over the left shoulder, or round both the shoulders like a Roman toga. Under this garment is often worn a coat or a shirt. When an Indian appears in his full indigenous dress, he wears a long robe, reaching at least down to the calves: the sleeves may be wide, or long and sometimes puckered from the wrist to the elbow. Before Europeans introduced buttons, a coat was fastened by ribbons, and the fashion is not obsolete. The Mahomedan prefers to button his coat to the left, the Hindu to the right. A shawl is tied round the waist over the long coat, and serves as a belt, in which one may carry money or a weapon, if allowed. The greatest variety is shown in the head-dress. More than seventy shapes of caps, hats, and turbans, may be seen in the city of Bombay. In the Punjab and the United Provinces, in Bengal, in Burma and in Madras other varieties prevail. Cones and cylinders, domes and truncated pyramids, high and low, with sides at different angles: folded brims, projecting brims: long strips of cloth wound round the head or the cap in all possible ways, ingenuity culminating perhaps in the "parrot's beak" of the Maratha turban—all these fashions have been evolved by different communities and in different places, so that a trained eye can tell from the head-covering whether the wearer is a Hindu, Mahomedan or Parsi, and whether he hails from Poona or Dharwar, Ahmedabad or Bhavnagar.

Fashion Variations.—Fashions often vary with climate and occupation. The Bombay fisherman may wear a short coat and a cap, and may carry a watch in his pocket; yet, as he must work for long hours in water; he would not cover his legs, but suspend only a coloured kerchief from his waist in front. The Pathan of the cold north-west affects loose baggy

trousers, a tall head-dress befitting his stature and covers his ears with its folds as if to keep off cold. The poorer people in Bengal and Madras do not cover their heads, except when they work in the sun or must appear respectable. Many well-to-do Indians wear European dress at the present day, or a compromise between the Indian and European costumes; notably the Indian Christians and Parsis. Most Parsis however have retained their own head-dress, and many have not borrowed the European collar and cuffs. The majority of the people do not use shoes: those who can afford them wear sandals, slippers and shoes, and a few cover their feet with stockings and boots after the European fashion in public.

Women's Costumes.—The usual dress of a woman consists of a long piece of cloth tied round the waist, with folds in front, and one end brought over the shoulder or the head. The folds are sometimes drawn in and tucked up behind. In the greater part of India women wear a bodice: on the Malabar coast many do not, but merely throw a piece of cloth over the breast. In some communities petticoats, or drawers, or both are worn. Many Mussalman ladies wear gowns and scarfs over them. The vast majority of Mahomedan women are *goshas*, and their dress and persons are hidden by a veil when they appear in public: a few converts from Hinduism have not borrowed the custom. In Northern India Hindu women have generally adopted the Mussalman practice of seclusion. In the Dekhan and in Southern India they have not.

As a rule the hair is daily oiled, combed, parted in the middle of the head, plaited and rolled into a chignon, by most women. Among high caste Hindu widows sometimes shave their heads in imitation of certain ascetics, or monks and nuns. Hindu men do not, as a rule, completely shave their heads, Mahomedans in most cases do. The former generally remove the hair from a part of the head in front, over the temples, and near the neck, and grow it in the centre, the quantity grown depending upon the fancy of the individual. Nowadays many keep the hair cropped in the European fashion, which is also followed by Parsis and Indian Christians. Most Mussalmans grow beards, most Hindus do not, except in Bengal and elsewhere, where the Mahomedan influence was paramount in the past. Parsis and Christians follow their individual inclinations. Hindu ascetics, known as Sadhus or Bairagis as distinguished from Sanyasis, do not clip their hair, and generally coil the uncombed hair of the head into a crest, in imitation of the god Shiva.

Hindu women wear more ornaments than others of the corresponding grade in society. Ornaments bedeck the head, the ears, the nose, the neck, the arms, wrists, fingers, the waist—until motherhood is attained, and by some even later—and the toes. Children wear anklets. Each community affects its peculiar ornaments, though imitation is not uncommon. Serpents with several heads, and flowers, like the lotus, the rose, and the champaka, are among the most popular object of representation in gold or silver.

Caste Marks.—Caste marks constitute a mode of personal decoration peculiar to Hindus, especially of the higher castes. The simplest mark is a round spot on the forehead. It represents prosperity or joy, and is omitted in mourning and on fast-days. It may be red, or yellowish as when it is made with ground sandalwood paste. The worshippers of Vishnu draw a vertical line across the spot, and as Lakshmi is the goddess of prosperity, it is said to represent her. A more elaborate mark on the forehead has the shape of U or V, generally with the central line, sometimes without it, and represents Vishnu's foot. The worshippers of Shiva adopt horizontal lines, made with sandalwood paste or ashes. Some Vaishnavas stamp their temples, near the corners of the eyes, with figures of Vishnu's conch and disc. Other parts of the body are also similarly marked. The material used is a kind of yellowish clay. To smear the arms and the chest with sandalwood paste is a favourite kind of toilet, especially in the hot season. Beads of Tulsi or sacred Basil, and berries of Rudraksha *elaeagnus ganitrus*, strung together are worn round their necks by Vaishnavas and Shaivas, respectively. The Lingayats, a Shaiva sect, suspend from their necks a metallic casket containing the Linga or phallus of their god. Balragis, ascetics, besides wearing Rudraksha rosaries round their necks and matted hair, smear their bodies with ashes. Religious mendicants suspend from their necks figures of the gods in whose name they beg. Strings of cowries may also be seen round their necks. Muslim dervishes sometimes carry peacock's feathers.

Hindu women mark their foreheads with a red spot or horizontal line. High caste widows are forbidden to exhibit this sign of happiness, as also to deck themselves with flowers or ornaments. Flowers are worn in the chignon. Hindu women smear their faces, arms, and feet sometimes with a paste of turmeric, so that they may shine like gold. The choice of the same colour for different purposes cannot always be explained in the same way. The red liquid with which the evil eye is averted may be a substitute for the blood of the animal slaughtered for the purpose in former times. In many other cases this colour has no such associations. The Muslim dervish affects green, the Sikhi Akali is fond of blue, the Sanyasi adopts orange for his robe, and no reason can be assigned with any degree of certainty.

Shiva.—India is a land of temples, mosques and shrines, and the Hindu finds at every turn some supernatural power to be appeased. Shiva has the largest number of worshippers. He has three eyes, one in his forehead, a moon's crescent in his matted hair, and at the top of the coil a woman's face representing the river Ganges. His abode is the Mount Kailas in the Himalayas, from which the river takes its source. Round his neck and about his ears and limbs are serpents, and he also wears a necklace of skulls. In his hands are several weapons, especially a trident, a bow, and a thunderbolt, and also a drum which he sounds while dancing for he is very fond of this exercise. He sits on a tiger's skin, and his vehicle is a white bull. His wife Parvati and his son Ganesha sit on his thighs. An esoteric mean-

ing is attached to every part of his physical personality. The three eyes denote an insight into the past, present and future; the moon, the serpent, and the skulls denote months, years and cycles, for Shiva is a personification of time, the great destroyer. He is also worshipped as a Linga or phallus which represents creative energy.

Ganpati.—Ganesh or Ganpati, the controller of all powers of evil subject to Shiva, is worshipped by all sects throughout India. Every undertaking is begun with a prayer to him. He has the head of an elephant, a large abdomen, serpents about his waist and wrists, several weapons in his hands, and a piece of his tusk in one hand. He is said to have broken it off when he wanted to attack the moon for ridiculing him. The different parts of his body are also esoterically explained. His vehicle is a rat.

Parvati.—Parvati, the female energy of Shiva, is worshipped under various names and forms. She is at the head of all female supernatural powers, many of whom are her own manifestations. Some are benign and beautiful, others terrible and ugly. Kali, the tutelary deity of Calcutta or Calcutta, is one of her fierce manifestations. In this form she is black: a tongue smeared with blood projects from her gaping mouth; besides her weapons, she carries corpses in her hands, and round her neck are skulls. Bombay also takes its name from a goddess, Mumbadevi. Gouri, to whom offerings are made in Indian homes at an annual festival, is benign. On the other hand the epidemic diseases like the plague and small-pox are caused by certain goddesses or "mothers."

Vishnu, the second member of the Hindu trinity, is the most popular deity next to Shiva. He is worshipped through his several incarnations as well as his original personality. His home is the ocean of milk, where he reclines on the coils of a huge, many-headed serpent. At his feet sits Lakshmi, shampooing his legs. From his navel issues a lotus, on which is seated Brahma, the third member of the trinity. In his hands are the conch, which he blows on the battlefield, and the disc, with which the heads of his enemies are severed. Round his neck are garlands of leaves and flowers, and on his breast are shining jewels. As Shiva represents destruction, Vishnu represents protection, and his son is the god of love. To carry on the work of protection, he incarnates himself from time to time, and more temples are dedicated nowadays to his most popular incarnations, Rama and Krishna, than to his original personality. Rama is a human figure, with a bow in one of his hands. He is always accompanied by his wife Sita, often by his brother Lakshmana, and at his feet, or standing before him with joined hands, is Hanuman, the monkey chieftain, who assisted him in his expedition against Ravana, the abductor of his wife. Krishna is also a human figure, generally represented as playing on a flute, with which he charmed the damsels of his city, esoterically explained to mean his devotees.

Brahma is seldom worshipped: only a couple of temples dedicated to him have yet been discovered in all India.

Minor Deities.—The minor gods and goddesses and the deified heroes and heroines who fill the Hindu pantheon, and to whom shrines are erected and worship is offered, constitute a legion. Many of them enjoy a local reputation, are unknown to sacred literature, and are worshipped chiefly by the lower classes. Some of them, though not mentioned in ancient literature, are celebrated in the works of modern saints.

The **Jains** in their temples, adore the sacred personages who founded and developed their sect, and venerate some of the deities common to Hinduism. But their view of Divinity is different from the Hindu conception, and in the opinion of Hindu theologians they are atheists. So also the **Buddhists** of Burma pay almost the same veneration to Prince Siddhartha as if he was a god, and indeed elevate him above the Hindu gods, but from the Hindu standpoint they are also atheists.

Images.—Besides invisible powers and deified persons, the Hindus venerate certain animals, trees and inanimate objects. This veneration must have originated in gratitude, fear, wonder, and belief in spirits as the cause of all good or harm. Some of the animals are vehicles of certain gods and goddesses—the eagle of Vishnu; the swan of Brahma; the peacock of Saraswati; Hanuman, the monkey of Rama; one serpent upholds the earth, another makes Vishnu's bed; elephants support the ends of the universe, besides one such animal being Indra's vehicle; the goddess Durga or Kali rides on a tiger; one of Vishnu's incarnations was partly man and partly lion. The cow is a useful animal: to the Brahman vegetarian her milk is indispensable, and he treats her as his mother. So did the Rishi of old, who often subsisted on milk and fruits and roots. To the agriculturist cattle are indispensable. The snake excites fear. Stones, on which the image of a serpent is carved, may be

seen under many trees by the roadside. The principal trees and plants worshipped are the Sacred Fig or Pipal, the Banyan, the Sacred Basil, the Bilva or Wood Apple, the Asoka, and the Acacia. They are in one way or another associated with some deity. The sun, the moon, and certain planets are among the heavenly bodies venerated. The ocean and certain great rivers are held sacred. Certain mountains, perhaps because they are the abodes of gods and Rishis, are holy. Pebbles from the Gandaki and the Narmada, which have curious lines upon them, are worshipped in many households and temples.

Worship.—Without going into a temple, one can get a fair idea of image worship by seeing how a serpent-stone is treated under a tree. It is washed, smeared with sandal, decorated with flowers; food in a vessel is placed before it, lamps are waved, and the worshipper goes round it, and bows down his head, or prostrates himself before the image. In a temple larger bells are used than the small ones that are brought to such a place; jewels are placed on the idol; and the offerings are on a larger scale. Idols are carried in public procession in palanquins or cars. The lower classes sacrifice animals before their gods and goddesses.

Domestic Life.—Of the daily domestic life of the people a tourist cannot see much. He may see a marriage or funeral procession. In the former he may notice how a bridegroom or bride is decorated: the latter may shock him, for a Hindu dead body is generally carried on a few pieces of bamboo lashed together; a thin cloth is thrown over it and the body is tied to the frame. The Mahomedan bier is more decent, and resembles the Christian coffin. Some Hindus, however, carry the dead to the burial ground in a palanquin with great pomp. The higher castes cremate the dead; others bury them. Burial is also the custom of the Muslims, and the Parsis expose the dead in Towers of Silence.

Indian Names.

The personal name of most Hindus denotes a material object, colour, or quality, an animal, a relationship, or a deity. The uneducated man, who cannot correctly pronounce long Sanskrit words, is content to call his child, father, brother, uncle, or mother, or sister, as the case may be. This practice survives among the higher classes as well. Appa Saheb, Anna Rao, Babaji, Bapu Lal, Bhai Shankar, Tatacharya, Jijibhai, are names of this description, with honorific titles added. It is possible that in early society the belief in the re-birth of departed kinsmen lent popularity to this practice. Nothing could be more natural than to call a man white, black, or red: gold or silver; gem, diamond, ruby, pearl, or merely a stone; small or tall, weak or strong; a lion, a snake, a parrot, or a dog; and to name a woman after a flower or a creeper. Thus, to take a few names from the epics, Pandu means

white, and so does Arjuna; Krishna black; Bhima terrible; Nakula a mongoose; Shunaka a dog; Shuka a parrot; Shringa a horn. Among the names prevalent at the present day Hira is a diamond; Ratna or Ratan a jewel; Sonu or Chinna gold; Velli or Belli, in the Dravidian languages, means white metal or silver. Men are often called after the days of the week on which they were born, and hence they bear the names of the seven heavenly bodies concerned. When they begin to assume the names of the Hindu deities, they practically enter upon a new stage of civilisation. It is doubtful whether the Animists ever venture to assume the names of the dreaded spirits worshipped by them. To pronounce the name of a devil is to invite him to do harm. If the spirits sometimes bear the names of human beings, the reason seems to be that they were originally human,

High-caste practices.—The high caste Hindu, on the other hand, believes that the more often the name of a deity is on his lips, the more merit he earns. Therefore he deliberately names his children after his gods and goddesses, so that he may have the opportunity of pronouncing the holy names as frequently as possible. These are also sonorous and picturesque. Shiva is happy: Vishnu is a pervader: Govinda is the cowherd Krishna: Keshava has fine hair: Rama is a delighter: Lakshmana is lucky: Narayana produced the first living being on the primeval waters: Ganesha is the Lord of Shiva's hosts: Dinakara is the luminary that makes the day: Subrahmanya is a brother of Ganesha. Sita is a furrow: Saitri a ray of light: Tara a star: Radha prosperity: Rukmini is she of golden ornaments: Bhama of the glowing heart. Shiva and Vishnu has each got at least a thousand names, and they may be freely drawn upon and paraphrased in naming one's children; and the whole Hindu pantheon is as crowded as it is large. When a mother loses several children, she begins to suspect that some evil spirit has conspired against her and in order to make her off-spring unattractive to the powers of darkness, she gives them ugly names, such as Keru, rubbish, or Ukrida, dunghill, or Martoba, the mortal. Women are named after rivers, as Sarasvati, Ganga, Bhagirathi, Godavari, or Kaveri, just as men are sometimes called after mountains. Manu counsels young men not to choose a wife with such a name, perhaps because a river is an emblem of deviousness and inconstancy, as a hill is an emblem of stability. But the names of rivers have not been discarded. The Burmans have a curious custom: if a child is born on a Monday, its name must begin with a guttural, on Tuesday with a palatal, on Thursday with a labial, on Saturday with a dental.

Family names.—When a person rises in importance, he adds to his personal name a family or caste name. It was once the rule that the title Sharma might be added to a Brahman's name, Varma to a Kshatriya's, Gupta to a Vaishya's, and Dasa to a Shudra's. This rule is fairly well observed in the case of the first two has changed. Dasa means a slave or servant, and the proudest Brahman cannot disdain to call himself the servant of some god. Thus, although Kalidas, the famous poet, was a Shudra, Ramadas, the famous guru of Shivaji, was a Brahmin. The Vaishnavas have made this fashion of calling oneself a servant of some god exceedingly popular, and in Western India high caste Hindus of this sect very commonly add Das to their names. The Brahmans of Southern India add Aiyer or Aiyangar to their names. Shastri, Acharya, Bhat, Bhattacharya, Upadhyaya, Mukhopadhyaya, changed in Bengal into Mukerji, are among the titles indicative of the Brahmanical profession of studying and teaching the sacred books. Among warlike classes, like the Rajputs and Sikhs, the title Singh (lion) has become more popular than the ancient Varma. The Sindhi Mal, as in Gldumal, means brave and has the same force. Raja changed into Raya, Rao and Rai was a political title, and is not confined to any caste. The Bengali family names, like Bose and Ghose,

Dutt and Mitra, Sen and Guha, enable one to identify the caste of their bearers, because the caste of a family or clan cannot be changed. Shet, chief of a guild or a town, becomes Chetty, a Vaishya title, in Southern India. Mudaliyar and Nayudu, meaning leaders, are titles which were assumed by castes of political importance under native rulers. Nayar and Menon are the titles of important castes in Malabar. Ram, Lal, Nand, Chand, are among the additions made to personal names in Northern India. Suffixes like Ji, as in Ramji or Jamshedji, the Kanarese Appa, the Telugu Garu, the feminine Bai or Devi, are honorific. Prefixes like Babu, Baba, Lala, Sodhi, Pandit, Raja, and the Burmese Maung are also honorific.

Professional names.—Family names sometimes denote a profession: in some cases they might have been conferred by the old rulers. Mehta, Kulkarni, Deshpande, Chitnavis, Mahalnavis are the names of offices held in former times. One family name may mean a flour seller, another a cane-seller, and a third a liquor-seller. To insert the father's name between one's personal and the family name is a common practice in Western India. It is rare elsewhere. When a family comes from a certain place, the suffix 'kar' or 'wallah' is added to the name of the place and it makes a family surname in Western India. Thus we may have Chiplunkars and Suratwallahs, or without these affixes we may have Bhavnagris, Malabaris and Billmorias, as among Parsis. Thus Vasudev Pandurang Chiplunkar would be a Hindu, whose personal name is Vasudev's father's name Pandurang, and family name derived from the village of Chiplun, is Chiplunkar. In Southern India the village name precedes the personal name. The evolution of Musalman names follows the same lines as Hindu names. But Muslims have no god or goddesses, and their names are derived from their religious and secular history. These names and titles are often as long and picturesque as Hindu appellations. The agnomens Baksh, Din, Ghulam, Khwaje, Fakir, Kazi, Munshi, Sheikh, Syed, Begum, Bibi and others, as well as honorific additions like Khan have meanings which throw light of Muslim customs and institutions. The Parsis also have no gods and goddesses, and their personal names are generally borrowed from their sacred and secular history. Their surnames frequently indicate a profession or a place, as in the case of Hindus in Western India. Batliwallah, Readymoney, Contractor, Saklatwallah, Adenwallah and others like them are tell-tale names.

Conversions.—As a rule, a child is named soon after it is born, and in the case of males the appellation is not changed. The higher Hindu castes have a separate ceremony called the name-giving ceremony performed on the twelfth day after birth. When a girl is married in these castes, the husband's family give her a new personal name. When a boy is invested with the sacred thread and is made a twice-born, his name is not changed, but when a man joins an order of ascetics, his lay name is dropped, and he assumes a new name. So also when a Burman joins an order of monks or nuns, the lay name is superseded by a Pali name. Christian converts change their original name when they are baptised.

Indian Art.

In India there has never been so marked a separation between what are now known as the Fine Arts, and those applied to industry as was the case in Europe during the nineteenth century. As, however, industrial art forms the subject of a special article in this book, the term Indian Art will here be confined to Architecture, Sculpture and Painting.

Historical.—The degree of proficiency attained in art by Indians prior to B. C. 250, can only be conjectured by their advancement in literature; and by the indirect evidences of indebtedness shown by the works of the historic period, to those which preceded them; or direct records of artistic work of an earlier date than B. C. 250 do not exist. The chief historic schools of architecture are as follows

Name.	Dates.	Locality of the best Examples.
Buddhist	.. B.C. 250— A.D. 750.	Ellora, Ajanta, Kailash, Sanchi.
Jaina A.D. 1000— 1300.	Ellora, Mount Abu, Palitana.
Brahminical	.. A.D. 500 to the present day.	Ellora, Elephanta, Orissa, Bhuvaneshwar, Dharwar.
Chalukyan	.. A.D. 1000— 1200.	Umber, Somnathpur, Ballur.
Dravidian	.. A.D. 1350— 1750.	Ellora, Tanjore, Madurai, Tinnevely.
Pathan	.. A.D. 1200— 1550.	Delhi, Mandu, Jaunpore.
Indo-Saracenic	A.D. 1520— 1760	Lahore, Delhi, Agra, Amber, Bijapur.

Buddhist Architecture is mainly exemplified by the rock-cut temples and monasteries found in Western India and in the *Topes* or sacred mounds. The interior decorations, and external facades of the former, and the rails and gates surrounding the latter point unmistakably to their being derived from wooden structures of an earlier period. The characteristic features of these temples are horse-shoe openings in the facades to admit light, and colonnades of pillars with richly ornamented caps in the interior halls. Jaina Architecture is found in its most highly developed form in the Dilwara temples at Mount Abu. The ground plan consists of a shrine for the god or saint; a porch, and an arcaded courtyard with niches for images. The characteristic of the style is grace and lightness, with decorative carving covering the whole interior, executed with great elaboration and detail. Constructional methods suggest that original types in wood have been copied in marble.

Brahminical, Chalukyan and Dravidian styles differ little in essential plan, all having a shrine for the god, preceded by pillared porches. The outer forms vary. The northern Brahminical temples have a curved pyramidal roof to the shrines, which in the southern or Dravidian style are crowned by a horizontal system of storied towers, and each story, decreasing in size, is ornamental with a central cell and figures in high relief. The Chalukyan style is affected by its northern and southern neighbours, taking features from each without

losing its own special characteristics of which the star-shaped plan of the shrine, with the five-fold bands of external ornament, is the principal features. Pathan Architecture was introduced into India by the Mahomedan invasion of the thirteenth century. At old Delhi are fine examples in the Kutub Mosque and Minar. The characteristics of the style are severity of outline, which is sometimes combined with elaborate decoration due, it is stated, to the employment of Hindu craftsmen. The mosques and tombs at Ahmedabad already show Hindu influence; but purer examples are to be found at Jaunpore and Mandu. Indo-Saracenic Architecture reached the climax of its development during the reigns of the Moghul Emperors, Akbar, Jehangir and Shah Jahan. It eclipsed in richness of material and refinement of taste the building efforts of previous periods, its crowning example being the Taj Mahal at Agra. The buildings erected during the Adil Shahi dynasty at Bijapur at a slightly later date, exhibit a certain Turkish influence, especially in the great tomb of Mahmoud. Though less refined and lacking the attraction of precious materials in their decoration, these splendid edifices are held in higher esteem by some critics than those of the Moghals, on account of their simplicity, grandeur and fine proportions. The era of great civil architecture in India was revived by the Mahomedan powers. Splendid palaces and fortresses were built at Madras, Delhi, Agra, Fatehpore-Sikri and Bijapur, and the example thus set was copied by the Hindu princes at Jaipur, Udaipur and elsewhere in India. The application of great architectural treatment, unequalled in extent elsewhere, is to be seen in the Ghats or steps enclosing lakes and on the banks of rivers. The most notable constructional contribution of the Mahomedans to Indian architecture was the introduction of the true arch and dome.

Sculpture.—The use of sculpture and painting in isolated works of art was practically non-existent in India until modern times. One or two reliefs and certain gigantic figures may be quoted as exceptions, but taken generally it may be stated that these arts were employed as the decorative adjuncts of architecture. No civil statuary, such as is now understood by the term, was executed; for no contemporary portrait figures, or busts in marble, or bronze, have come down to us from the ruins of ancient India, as they have from those of Egypt, Greece and Rome. Sculpture has been used exclusively as the handmaid of religion, and to this fact may be attributed the stereotyped forms to which it became bound. The lavish use of sculpture on Indian temples often exceeds good taste, and mars the symmetry and dignity of their mass and outline; but for exuberance of imagination, industrious elaboration and vivid expression of movement, Indian sculpture is perhaps without its equal elsewhere in the world. The most impressive specimens are the earliest, found in the Buddhist and Brahminical cave temples of Ellora, Ajanta and Elephanta. The great Trimurti in the last named of these temples ranks for mystery

and expressive grandeur with the greatest masterpieces of Egyptian art. The outstanding characteristics of Hindu sculpture are the power displayed in suggesting movement; the fine sense of decorative arrangements of line and mass; and an overpowering ingenuity in intricate design. Mahomedan sculpture in India, though not exclusively confined to geometric forms as is that of the more severe Arabian school, is very restrained as compared with that of the Hindus. Floral motifs are often used in the ornaments to tombs and palaces, but rarely in those of mosques. Their geometric ornament shows great ingenuity and invention; and wonderful decorative use is made of Persian, Arabic and Urdu lettering in panels, and their borders. The representation of human or animal figures is rarely to be met with. Sculptured and modelled relief is, as a rule, kept very low; and is mainly confined to the decoration of mouldings, architraves, lintels, or the bands of ornament which relieve large exterior wall spaces. Buildings of purely Mahomedan design and workmanship show greater restraint than those upon which Hindu workmen have been employed and are more satisfactory; but at Ahmedabad the two celebrated windows are striking examples of a happy combination of the two styles.

Painting.—Much of the carved stonework upon ancient Indian buildings was first plastered and then decorated with colour, but the only paintings, in the modern acceptation of the term, now existing, which were executed prior to the Moghul period, are those upon the walls of the cave temples at Ajanta. These remarkable works were produced at intervals during the first 600 years of the Christian era. They exhibit all the finer characteristics of the best Indian sculpture, but with an added freedom of expression due to the more tractable vehicle employed. They remained hidden in the Deccan jungles for nearly twelve hundred years, until accidentally discovered in 1816. They are painted in a species of fresco; and when first brought to light were well preserved, but they have greatly deteriorated owing to the well meant, but misguided action of copyists, and the neglect of the authorities. Their origin is as wrapt in mystery as is that of the artists who painted them; for no other paintings of similar power and character are known to exist; and the artists, so far as is known, left no successors. Nine hundred years elapsed between the completion of the Ajanta paintings and the commencement of the second period of Indian painting. This owed its origin to the introduction of Persian artists by the Moghul Emperor Akbar; and the establishment of the Indigenous Moghul school was due to his encouragement and fostering care of his successors, Jehangir and Shah Jahan. Unlike the works of the Ajanta painters, which were designed upon a large scale, the pictures of the Moghul school were miniatures. They were executed in a species of opaque water-colour upon paper or vellum, resembling in technique the illuminated missals produced by the monks in Europe during the middle ages. Some of the finest of the earlier specimens in India are of a religious character; this phase of development being closely allied to the art

the calligraphist. As its range extended, a remarkable school of portrait painters arose notable for restrained but extremely accurate drawing, keen insight into character, harmonious colour, fine decorative feeling, and extraordinary delicacy and finish in the painting of detail. The artists of a Hindu off-shoot of this movement, known as the Rajput school, were less fully endowed with the technical and purely aesthetic qualities than were the Moghul painters; but they brought to their work poetry and sentiment which are not to be found in that of the Mahomedans. The pictures of both branches of the Moghul school, although highly decorative in character, were not intended for exhibition upon the walls of rooms, according to Western practice, and, when not used as illustrations or decorations to manuscript books, were preserved in portfolios. As this school of painting was the last expression of traditional art in India, in the restricted sense here applied to the term, and, as the question has a distinct bearing upon the modern development of painting, a few words may be added regarding the difference between the conventions followed by Eastern and Western painters. Until the middle of the fourteenth century the conventions of both East and West were practically the same, though the use of them differed according to environment and national temperament. These conventions the artists of the East have retained; and development has been upon the line of decorative fitness, harmony of colour, and expressive action. Their art has throughout been decorative, and when natural objects have been depicted, their treatment has been that of a flat pattern. The European painters, after the period above mentioned on the contrary, sought to attain the appearance of actuality in the objects depicted by the study of the science of light and shade, and perspective; and in achieving this end, and developing it into the realisation of atmosphere and light, they sacrificed a large measure of the decorative quality which characterised the work of the earlier school. Eastern artists have ignored or been blind to light and shade; and in works entirely free from European influence one will look in vain for any suggestion of it in their figures or for shadows of objects cast upon the ground. During the last fifty years there has been a strong movement toward a return to decorative conventions, on the part of European artists who have assimilated much that the East has to teach them, without thereby affecting the distinctively Western character of their work. Indian and Japanese artists have been less successful when attempting the reverse of this practice, and appear to lose whatever is best in their traditional practice without acquiring the finer qualities of that of the West.

Modern Painting.—As the reign of Shah Jahan exhibits the high tide of artistic development in India, so the reign of his successor Aurangzeb marks the period of its rapid decline. The causes of this are attributable to the absence of encouragement by this Emperor; to his long periods of absence from the court at Delhi or Agra, entailed by the continuance of his waged in his efforts to bring the whole of the Peninsula under his rule; and partly to the tendency strongly inherent in the Indian artist

to become stereotyped in his practice. All foreign designers, painters and craftsmen who had been attracted to India by the great works carried out by Akbar, Jehangir and Shah Jahan left the country, and their places were taken by no successors. The indigenous artists left to themselves in the isolated courts of small Indian princes, or collected in schools in remote districts, employed themselves mainly upon repeating the works of a previous age, instead of seeking new motifs for artistic treatment. So purely mechanical did the work become that in some of the schools or guilds of painters, the execution of a single picture was subdivided; one craftsman painting the face, a second the drapery, and a third the background. Such methods could only lead to deterioration and decay. At the time when the British East India Company ceased to be only a guild of merchants and became a great administrative power in 1757, very little vitality survived in the ancient art of the country. During the century of its administrative history between the battle of Plassey and the Indian Mutiny, the "Company" was too fully occupied in fighting for its existence, extending its borders and settling the internal economy of its ever increasing territories, to be able to give much attention to conserving any remnant of artistic practice which had survived. Without any deliberate intention of introducing western art into the country, Greek and its derivative styles of architecture were adopted for public and private buildings in Calcutta, Bombay and Madras because these were found to be more suitable for their purpose than buildings of indigenous pattern. The practical result was the same; for the Indian craftsmen employed upon their erection were confronted with styles affording no scope for the application of their traditional ornament and concerning which they had no knowledge or sympathy. As there were no sculptors in India capable of modelling or carving civil sculpture, the monuments to distinguish public servants were all imported from England; and the portraits, or other paintings which decorated the interior walls of the buildings, were furnished by European painters who visited India or by artists in England. Although a considerable amount of research work of a voluntary nature was done by Archaeologists, no official interest was taken in artistic education until the Government of India was transferred to the British Crown in 1859. In England itself, the first fifty years of the nineteenth century was a period of gross commercialism and artistic degradation; but with the advent of the International Exhibition of 1851 the eyes of the nation were opened to the value of art as applied to industry.

The Schools of Art then instituted throughout England were imitated in a timid and tentative manner in India; and were attached to the educational system, which had been previously modelled upon a definitely European basis. These schools of art, it should be remembered, were specially established to assist the artistic industries of the country, and not to provide instruction in architecture, sculpture and painting. In fact at a subsequent period they narrowly escaped extinction by the Secretary of State, upon the ground that they had become schools of painting and had thus

been diverted from performing the original function for which they were established. The work of the Schools of Art in regard to industrial art is referred to elsewhere; and as two of them, that at Madras and that at Lahore, have confined their activities almost exclusively to this branch of the subject it is necessary to mention only the work of the Schools at Calcutta and Bombay in the present article. The Calcutta school, except for occasional experiments in the application of the graphic arts to lithography, engraving and stained glass, has become a school of painting and drawing. That at Bombay covers a wider field; for in addition to classes for modelling, painting and design it possesses a special school of architecture; a range of technical workshops, in which instruction is given in the applied arts; and research laboratories and studios devoted solely to the improvement of the Pottery industry. It is in the principles underlying the instruction in painting that the schools at Calcutta and Bombay have taken almost diametrically opposite roads to reach the end they both have in view, namely, the revival of the art of painting in India by means of an indigenous school of Indian painters. Mr. Havell, who until a few years back was the Principal of the Calcutta School, banished from within its walls every vestige of European art; and claimed that the traditional art of India, in its old forms, is not dead, but merely sleeping or smothered by the blanket of European culture laid upon it for the last 150 years, and needed but to be released from this incubus to regain its pristine vigour. Well equipped with literary ability; backed by intense enthusiasm for the views he held, which he advocated with admirable persistence; he imposed upon his students an exclusive and severe study of the Moghul and Rajput schools of painting. He was fortunate in finding a willing and equally enthusiastic disciple in Mr. Abinandranath Tagore, an artist of fine imagination and fancy, endowed with technical ability of a high order, combined with a serious devotion to his art. He with other Bengal painters, inspired by Mr. Havell's precept, founded, about fifteen years ago, what has since become known as the Calcutta School of painting. In their early work the painters of this school closely adhered to the conventions of Moghul and Rajput artists, whom they took as their models; and these early examples made a great impression upon all European critics who saw them. They were welcomed as the first sign of a genuine revival of Indian painting, based upon traditional lines, and it was confidently hoped that the movement would meet with the support it merited from Indians of all classes. Interesting as many individual works of the school undoubtedly are the anticipations which greeted its inception have scarcely been fulfilled by the Calcutta school. The painters themselves have never reached the high technical standard of the artists who produced the best works of the Moghul or Rajput school; and, as time has passed, their outlook appears to have shifted, and, while stemming the flood of western influence, they appear to have drifted into a backwater of Japanese conventions. The Indian public has failed to give the school the support it was hoped they would afford, and the movement has had to depend for encourage

ment mainly upon Europeans in England and India.

Bombay School of Art.—The attitude towards the development of art in modern India taken by Mr. Cecil Burns, who long guided the policy of the Bombay school, was diametrically opposite to that favoured by Mr. Havell. While yielding to no one in his admiration for the ancient art of India, and giving every encouragement to his students to study its masterpieces, the view he takes is that with European literature dominating the system under which the educated classes in India are trained; with European ideas, and science permeating the professional, commercial, industrial, and political life of the country, it is not possible for modern Indians now to recapture the spirit which alone gave vitality to the great works of the past; that without this spirit, the conventions the ancient artists adopted are mere dead husks; and that to copy these would be as unprofitable as it would be for the artists of Europe to harness themselves to the conventions of the Greek and Roman sculptors or to those of the mediæval painters; that with European pictures, often of inferior quality illustrating every educational text book, and sold in the shops of every large city, it is essential for the proper education of art students that they should have before them the masterpieces of European art; and that, with the wide adoption of European styles of architecture in India, it is necessary for a school of art to possess the best examples of ornament applicable to the great historic styles, for the purpose of study and reference. There are certain basic principles common to the technique of all great art, such as fine and accurate drawing in its widest sense, composition and design, and the science of colour harmony. By means of these an artist can express his individuality and emotions, and Mr. Burns held that the main function of a School of Art is to equip its students with the power of expression, untrammelled by any set conventions, so that when they leave the school, they do so with the capacity to employ their faculties in any direction their sympathies and tastes may impel them to take. Which of these two very divergent theories will produce the result both these gentlemen unite in wishing

to see brought to pass, time alone will show. Certain it is that the driving force of any artistic impulse must come from within the nation, and that India, like every other country, in its art, as in other matters, must work out its own salvation.

One striking success of hopeful augury has been achieved by the Bombay School in recent years. This is the establishment of a flourishing school of architecture in which the study of Indian architecture takes an important place. Connected with this school is a students' architectural association designed to keep past students in touch with the school and with one another. As architecture embraces and influences every branch of decorative and industrial art, it is to be hoped that this school may be the means whereby the ancient glories of Indian architecture will be some day revived in new forms, bringing in its train a vitalising influence upon every other form of artistic activity.

Mural Painting.—Mr. W. E. Gladstone Solomon, the present Principal, has during the last four years studiously avoided any dogmatic theories as to the ultimate end which Indian art is destined to attain, though he has consistently pointed out the Indian's pre-eminence in the decoration of wall spaces. The guiding principle with Mr. Solomon has been to teach the students to draw and to paint what they see; and further to encourage by all possible means their natural progress in the direction towards which their inherent instinct most obviously urges them. The application of this close training in the study of form and colour from the life to a decorative purpose, which accords both with ancient traditions and modern manifestations of the Indian artistic genius, has recently taken a definite line in the production of the mural paintings executed by the students at Government House and elsewhere in Bombay. These paintings are regarded as a hopeful augury for the future of Indian art demonstrating as they do the capacity of young Indian artists to grapple with the exacting problems of figure composition and to carry them out on a comprehensive scale. Specimens of mural paintings by the students of the Sir. T. T. School of Art, Bombay, are being sent to the Empire Exhibition at Wembley.

Posts and Telegraphs.

POST OFFICE.

The control of the Posts and Telegraphs of India is vested in an officer designated Director-General of Posts and Telegraphs who works in subordination to the Government of India in the Department of Industries and Labour. The superior staff of the Direction, in addition to the Director-General himself, consists on the postal side of two Deputy Directors-General (who are officers of the rank of Postmaster-General), and six Assistant Directors-General (whose status is similar to that of Deputy Postmasters-General).

For postal purposes, the Indian Empire is divided into nine circles as shown below, each of the first eight is in charge of a Postmaster-General and the Sind and Baluchistan Circle is controlled by a Deputy Postmaster-General:—Bengal and Assam, Bihar and Orissa, Bombay, Burma, Central, Madras, Punjab and North-West Frontier, United Provinces and Sind and Baluchistan. The Central Circle comprises roughly the Central Provinces and the Central India and Rajputana Agencies.

The Postmasters-General are responsible to the Director-General for the whole of the postal arrangements in their respective circles, with the exception of those connected with the conveyance of mails by railways and inland steamers which are entrusted to three officers bearing the designation of Deputy Postmaster-General, Railway Mail Service. All the Postmasters-General are provided with Personal Assistants, while those in charge of the largest circles are also assisted by Deputy Postmasters-General. The nine Postal Circles and the jurisdictions of the three Deputy Postmasters-General, Railway Mail Service, are divided into Divisions, each in charge of a Superintendent of Post Offices or Railway Mail Service as the case may be and each Superintendent is assisted by a certain number of officials styled Inspectors.

Generally there is a head post office at the head-quarters of each revenue district and other post offices in the same district are usually subordinate to the head office for purposes of accounts. The Postmasters of the Calcutta, Bombay, and Madras General Post Offices

and of the larger of the other head post offices are directly under the Postmaster-General. The Presidency Postmasters, indeed, have one or more Superintendents subordinate to them. When the duties of the Postmaster of a head office become so onerous that he is unable to perform them fully himself, a Deputy Postmaster is appointed to relieve him of some of them, and if still further relief is required, one or more Assistant Postmasters are employed. The more important of the offices subordinate to the head office are designated sub-offices and are usually established only in towns of some importance. Sub-offices transact all classes of postal business with the public, submit accounts to the head offices to which they are subordinate, incorporating therein the accounts of their branch offices, and frequently have direct dealings with Government local sub-treasuries. The officer in charge of such an office works it either single-handed or with the assistance of one or more clerks according to the amount of business.

Branch offices are small offices with limited functions ordinarily intended for villages, and are placed in charge either of departmental officers on small pay or of extraneous agents, such as school-masters, shopkeepers, landholders or cultivators who perform their postal duties in return for a small remuneration.

The audit work of the Post Office is entrusted to the Accountant-General, Posts and Telegraphs, who is an officer of the Finance Department of the Government of India and is not subordinate to the Director-General. The Accountant-General is assisted by Deputy Accountants-General, all of whom, with the necessary staff of clerks, perform at separate headquarters the actual audit work of a certain number of postal circles.

In accordance with an arrangement which has been in force since 1883, a large number of sub-post offices and a few head offices perform telegraph work in addition to their postal work and are known by the name of combined offices. The policy is to increase telegraph facilities everywhere and especially in towns by opening a number of cheap telegraph offices working under the control of the Post Office.

The **Inland Tariff** (which is applicable to Ceylon and Portuguese India except as indicated below) is as follows:—

	When the postage is prepaid.	When the postage is wholly unpaid.	When the postage is insufficiently prepaid.
<i>Letters.</i>	Anna.		
Not exceeding two and a half tolas ..	1	} Double the prepaid rate (chargeable on delivery).	} Double the deficiency (chargeable on delivery).
Every additional two and a half tolas or part of that weight	1		
<i>Book and pattern packets.</i>			
Every 5 tolas or part of that weight ..	1		

Postcards.

Single	1/2 anna.
Reply	1 ..

(The postage on cards of private manufacture must be prepaid in full.)

Parcels (prepayment compulsory).

(a) Parcels not exceeding 440 tolas in weight:—

	Rs. a.
Not exceeding 20 tolas	0 2
Exceeding 20 tolas but not exceeding 40 tolas	0 3
For every additional 40 tolas or part of that weight	3 annas.

(b) Parcels exceeding 440 tolas in weight:—

Exceeding 440 tolas but not exceeding 480 tolas	Rs. 3 0
4 annas for every additional 40 tolas or fraction thereof up to 800 tolas.	

Registration is compulsory in the case of parcels weighing over 440 tolas.

These rates are not applicable to parcels for Portuguese India.

In the case of parcels for Ceylon a registration fee of 2 annas is chargeable on each parcel in addition to the rates shown above.

Registration fee.

	Rs. a.
For each letter, postcard, book or pattern packet, or parcel to be registered	0 2

Ordinary Money Order fees.

On any sum not exceeding Rs. 10	0 2
On any sum exceeding Rs. 10 but not exceeding Rs. 25	0 4
On any sum exceeding Rs. 25 up to Rs. 600	0 4

for each complete sum of Rs. 25, and 4 annas for the remainder; provided that, if the remainder does not exceed Rs. 10, the charge for it shall be only 2 annas.

Telegraphic money order fees.—The same as the fees for ordinary money orders plus a telegraph charge calculated at the rates for inland telegrams for the actual number of words used in the telegram advising the remittance, according as the telegram is to be sent as an "Express" or as an "Ordinary" message.

In the case of Ceylon the telegraph charge is calculated at the rates shown below:—

Express.—Rs. 2 for the first 12 words and 3 annas for each additional word.

Ordinary.—Re. 1 for the first 12 words and 2 annas for each additional word. Telegraphic money orders cannot be sent to Portuguese India.

Value-payable fees.—These are calculated on the amount specified for remittance to the sender and are the same as the fees for ordinary money orders.

Insurance fees.—For every Rs. 50 of insured value 1 anna.

As regards Ceylon and Portuguese India see Foreign Tariff.

Acknowledgment fee.—For each registered article 1 anna.

The Foreign Tariff (which is not applicable to Ceylon except in respect of insurance fees or to Portuguese India except in respect of insurance fees and parcel postage) is as follows:—

Letters.

To the United Kingdom, other British Possessions and Egypt, including the Sudan. } 2 annas for the first ounce and 1 1/2 anna for each additional ounce or part of that weight.

To other countries, colonies or places. } 3 annas for the first ounce and 1 1/2 annas for every additional ounce or part of that weight.

Postcards Single 1 1/2 anna.

Reply 3 annas.

Printed Papers.—1/2 anna for every 2 ounces or part of that weight.

Business Papers.—For a packet not exceeding 10 ounces in weight .. 3 annas. For every additional 2 ounces or part of that weight 1/2 anna.

Samples.—1/2 anna for every 2 ounces or part of that weight, subject to a minimum charge of 1 anna for each packet.

(The rates shown above are those chargeable when the postage is prepaid.)

Parcels.—(Prepayment compulsory.) The rates vary with the countries to which they are addressed. The rates to the United Kingdom are—

		Via Gibralt.
		Rs. a. p.
Not over 3 lbs.	1 8 0	
" " 7	2 12 0	
" " 11	3 15 0	

Registration fee.—3 annas for each letter, postcard, or packet.

Insurance fees (for Registered Letters and Parcels only).—

- (1) To all countries and places to which insurance is available with the exception of those named below—5 annas for £12 and 5 annas for every additional £12.
- (2) To Mauritius and British Somaliland—5 annas for R 200, and 5 annas for every additional R 200.
- (3) To Ceylon (for both letters and parcels) and Portuguese India (for letters only)—2 annas for R 100 and 2 annas for every additional R 100.
- (4) To Portuguese India, the Seychelles and Zanzibar (for parcels only)—5 annas for R 200, and 5 annas for every additional R 200.

Money Orders.—To countries on which money orders have to be drawn in rupee currency, the rates of commission are the same as in the case of inland money orders.

To countries on which money orders have to be drawn in sterling, the rates are as follows:—

On any sum not exceeding £1	Rs. a	0	3
" " exceeding £1 but not exceeding £2	£2	0	5
" " " £2 " " £3	£3	0	8
" " " £3 " " £4	£4	0	10
" " " £4 " " £5	£5	0	12
" " " £5 " " "	£5	0	12

for each complete sum of £5 and 12 annas for the remainder, provided that if the remainder does not exceed £1, the charge for it shall be 3 annas; if it does not exceed £2, the charge for it shall be 5 annas; if it does not exceed £3, the charge for it shall be 8 annas; and if it does not exceed £4, the charge for it shall be 10 annas.

Insurance fees—

For insurance of letters and parcels to Ceylon and of letters to Portuguese India— Annas.

Where the value insured does not exceed Rs. 100 2

For every additional Rs. 100 or fraction thereof 2

For insurance of letters and parcels to Mauritius and the Somaliland Protectorate and of parcels to Portuguese India, the Seychelles or Zanzibar—

Where the value insured does not exceed Rs. 200 5

For every additional Rs. 200 or fraction thereof 5

For insurance to the United Kingdom and to British Possessions and foreign countries other than those mentioned above and for insurance of letters to the Seychelles—

Where the value insured does not exceed £12 5

For every additional £12 or fraction thereof 5

*Acknowledgment fee—*3 annas for each registered article.

Growth of the Post Office.—At the end of 1897-98 the total number of post offices was 11,742 and the total length of mail lines 126,351 miles. For the 31st March 1921 the corresponding figures were 19,496 and 157,301.

During the year 1897-98, the total number of letters, postcards, newspapers and packets given out for delivery was 460,899,344, while for the year 1920-21 the total number of unregistered articles of the same classes given out for delivery plus the number of registered letters and packets posted amounted to 1,375,266,446. The number of parcel mail articles given out for delivery in the former year was 4,119,781 as compared with 14,111,036 such articles posted during the latter year. The total number and value of money orders issued increased from 11,796,041 and Rs. 24,79,45,455 in 1897-98 to 38,504,814 and Rs. 98,36,48,317, respectively, in 1920-21. During the former year the total number of articles insured for transmission by post was 326,645 with an aggregate declared value of Rs. 10,00,62,590 and the corresponding figures for 1910-11 were 1,160,428 and Rs. 26,88,78,925. As the result, however, mainly of the introduction in 1911-12 of the rule under which inland articles containing currency notes or portions thereof must be insured, the figures for 1920-21 stand at 4,510,471 and Rs. 1,37,60,71,002. The number of accounts open on the books of the Post Office Savings Bank grew from 730,387 on the 31st March 1898 to 1,877,957 at the end of 1920-21, with an increase from Rs. 9,28,72,978 to Rs. 22,86,21,716 in the total amount standing at the credit of depositors. The total staff on the 31st March 1921 numbered 102,885. The net financial result of the working of the Post Office for the year 1920-21 was a deficit of Rs. 45,99,372.

This account of the activities of the Post Office would not be complete if it were not mentioned that on the 31st March 1921 there were 33,258 active Postal Life Insurance policies with an aggregate assurance of Rs. 4,88,57,682 and that during 1920-21 it disbursed a sum of Rs. 75,46,103 to Indian Military pensioners; sold over 512 lakhs of cash certificates to the public; collected at its own expense a sum of Rs. 504 lakhs on account of customs duty on parcels and letters from abroad; and sold 15,484 lbs. of quinine to the public.

TELEGRAPH DEPARTMENT.

Telegraphs.—Up to 1912 the telegraph system in India was administered as a separate department by an officer designated Director-General of Telegraphs who worked in subordination to the Government of India in the Department of Commerce and Industry. In that year it was decided to vest the control of Posts and Telegraphs in a single officer as an experimental measure with a view to the eventual amalgamation of the two Departments.

In pursuance of this policy an experimental amalgamation of the two services was introduced in the Bombay and Central Circles from the 1st July 1912. The fundamental principles of this scheme which followed closely the system in force in the United Kingdom and several other European countries were that the traffic and engineering work of the Telegraph Department should be separated, the former branch of work in each Circle being transferred to the Postmaster-General assisted by a Deputy Postmaster-General and a suitable number of attached officers and the engineering branch being controlled by a Director of Telegraphs in charge of the two Circles. Subordinate to this

officer there were several Divisional Superintendents who were assisted by a number of attached officers.

In 1914 the complete amalgamation of the two Departments was sanctioned by the Secretary of State and introduced from 1st April. The superior staff of the Direction, in addition to the Director-General himself, consists on the engineering side of a Chief Engineer, Telegraphs, with two Dy. Chief Engineers. For traffic work there is a Deputy Director-General, with an Assistant and two Assistant Directors-General. On the 27th March 1920 a Controller of Telegraph Traffic was appointed to assist the Deputy Director-General in the inspection of offices and in controlling telegraph traffic. In the Circles the scheme which has been introduced follows closely on the lines of the experimental one referred to above. For telegraph engineering purposes India is divided up into five Circles, each in charge of a Director. For Burma special arrangements were considered necessary and the engineering work is in charge of the Postmaster-General who is a Telegraph officer specially selected for the purpose. These six Circles are

divided into twenty-one Divisions each of which is in charge of a Divisional Engineer.

The telegraph traffic work is under the control of the Postmasters-General, each of whom is assisted by a Deputy Postmaster-General and a suitable staff of attached officers.

The audit work of the Telegraph Department is, like that of the Post Office, entrusted to the Accountant-General, Posts and Telegraphs, assisted by a staff of Deputy and Assistant Accountants-General.

Inland Telegrams and Tariff.—Telegrams sent to or received from places in India or Ceylon are classed as Inland telegrams. The tariff for inland telegrams is as follows:—

	For delivery in India	For delivery in Ceylon.
	Private and State.	Private and State.
	Ex-press. Rs. a.	Ordinary. Rs. a.
Minimum charge, 1	8	0 12
Each additional word over 12..	0 2	0 1
The address is charged for.	0 3	0 2
Additional charges.		
Minimum for reply-paid telegram	Minimum charge for an ordinary telegram.
Acknowledgment of receipt
Multiple telegrams, each 100 words or less 4 annas.
Collation One quarter of charge for telegram.
Rs.		
If both the offices of origin and destination are closed .. 2		
If only one of the offices is closed .. 1		
If the telegram has to pass through any closed intermediate office an additional fee in respect of each such office .. 1		
For acceptance of an Express telegram during the hours when an office is closed.	The usual inland charge plus a fixed fee of 8 annas.	
Signalling by flag or semaphore to or from ships Amount actually necessary.	
Boat hire 4 annas.	
Copies of telegrams; each 100 words or less 4 annas.	
	For delivery in India.	For delivery in Ceylon.
	Press.	Press.
	Ex-press. Rs. a.	Ordinary. Rs. a.
Minimum charge ..	1 0	0 8
Each additional word over 48 in respect of India, each additional four words over 82 in respect of Ceylon ..	2	0 1
The address is free.	0	2

Foreign Tariff.—The charges for foreign telegrams vary with the countries to which they are addressed. The rates per word for private and state telegrams to all countries in Europe are as follows:—

	Urgent	Ordinary.	Deferred.	State.
	Rs. a.	Rs. a.	Rs. a.	Rs. a.
All countries in Europe ..	3	12	1	4
Eastern ..	3	12	1	4

Radio-Telegrams.—For radio-telegrams addressed to ships at sea from offices in India or Burma and transmitted via the coast stations at Bombay, Calcutta, Diamond Island, Karachi, Madras, Port Blair, Rangoon or Victoria Point the charge is eleven annas per word in nearly all cases. Full particulars are given in Section XXIII of the Post and Telegraph Guide.

Growth of Telegrams.—At the end of 1897-98 there were 50,305 miles of line and 155,088 miles of wire and cable, as compared with 411,898 wire including cable and 91,760 line including cable miles, respectively, on the 31st March 1922. The numbers of departmental telegraph offices were 257 and 182, respectively, while the number of telegraph offices worked by the Post Office rose from 1,634 to 3,437. The increase in the number of paid telegrams dealt with is shown by the following figures:—

		1897-98.	1921-22.
Inland ..	Private ..	4,107,270	14,835,276
	State ..	800,382	1,557,848
	Press ..	35,910	348,341
Foreign ..	Private ..	735,670	2,889,103
	State ..	9,896	49,731
	Press ..	5,278	25,695
		5,754,415	19,697,994

The outturn of the workshops during 1921-22 represented a total value of Rs. 33,12,526. At the end of the year the total staff numbered 14,183. The total capital expenditure up to the close of 1921-22 amounted to Rs. 18,05,91,007. The net revenue for the year was Rs. 45,91,406.

Wireless.—The total number of Departmental wireless stations open at the end of 1921-22 was twenty-two, viz., Allahabad, Bombay, Calcutta, Delhi, Diamond Island, Jutozhi, Karachi, Lahore, Madras, Maymyo, Mhow, Naxpur, Patna, Peshawar, Poona, Port Blair, Quetta, Rangoon, Sandheads (two pilot vessels), Secunderabad and Victoria Point; of these only Diamond Island, Port Blair and Victoria Point book telegrams direct from the public. The stations at Patna and Poona were opened and that at Table Island closed during the year. New stations are under construction at Madras (St. Thomas' Mount) and Rangoon (Mingaladon).

Telephones.—On the 31st March 1922 the number of telephone exchanges established by the Department was 253 with 11,973 connections. Of these exchanges, 97 were worked departmentally. The number of telephone exchanges established by Telephone Companies was 10 with 23,958 connections.

Indian Architecture.

I. ANCIENT.

The architecture of India has proceeded on lines of its own, and its monuments are unique among those of the nations of the world. An ancient civilization, a natural bent on the part of the people towards religious fervour of the contemplative rather than of the fanatical sort, combined with the richness of the country in the sterner building materials—these are a few of the factors that contributed to making it what it was, while a stirring history gave it both variety and glamour. Indian architecture is a subject which at the best has been studied only imperfectly, and a really comprehensive treatise on it has yet to be written. The subject is a vast and varied one, and it may be such a treatise never will be written in the form of one work at any rate. The spirit of Indian art is so foreign to the European of art culture that it is only one European in a hundred who can entirely understand it, while art criticism and analysis is a branch of study that the modern Indian has not as yet ventured upon to any appreciable extent. Hitherto the one, and with a few exceptions the only recognized authority on the subject has been Fergusson, whose compendious work is that which will find most ready acceptance by the general reader. But Fergusson attempted the nearly impossible task of covering the ground in one volume of moderate dimensions, and it is sometimes held that he was a man of too purely European a culture, albeit wide and eclectic, to admit of sufficient depth of insight in this particular direction. Fergusson's classification by races and religions is, however, the one that has been generally accepted hitherto. He asserts that there is no stone architecture in India of an earlier date than two and a half centuries before the Christian era, and that "India owes the introduction of the use of stone for architectural purposes, as she does that of Buddhism as a state religion, to the great Asoka, who reigned B.C. 272 to 236."

Buddhist Work.

Fergusson's first architectural period is then the Buddhist, of which the great tope at Sanchi with its famous Northern gateway is perhaps the most noted example. Then we have the Gandharan topes and monasteries. Perhaps the examples of Buddhist architecture of greatest interest and most ready access to the general student are to be found in the Chaitya halls or rock-cut caves of Karli, Ajunta, Nasik, Ellora and Kanheri. A point with relation to the Gandharan work may be alluded to in passing. This is the strong European tendency, variously recognized as Roman, Byzantine but most frequently as Greek, to be observed in the details. The foliage seen in the capitals of columns bears strong resemblance to the Greek acanthus, while the sculptures have a distinct trace of Greek influence, particularly in the treatment of drapery, but also of hair and facial expression. From this it has been a fairly common assumption amongst some authorities that Indian art owed much of its debt to European influence, an assumption that is strenuously combated by others as will be pointed out later.

The architecture of the Jains comes next in order. Of this rich and beautiful style the most noted examples are perhaps the Dilwara temples near Mount Abu, and the unique "Tower of Victory" at Chittore.

Other Hindu Styles.

The Dravidian style is the generic title usually applied to the characteristic work of the Madras Presidency and the South of India. It is seen in many rock-cut temples as at Ellora, where the remarkable "Kylas" is an instance of a temple cut out of the solid rock, complete, not only with respect to its interior (as in the case of mere caves) but also as to its exterior. It is, as it were, a life-size model of a complete building or group of buildings, several hundred feet in length, not built, but sculptured in solid stone, an undertaking of vast and, to our modern ideas, unprofitable industry. The Pagoda of Tanjore, the temples at Srirangam, Chidambaram, Vellore, Vijayanagar, &c., and the palaces at Madura and Tanjore are among the best known examples of the style.

The writer finds some difficulty in following Fergusson's two next divisions of classification, the "Chalukyan" of South-central India, and the "Northern or Indo-Aryan style." The differences and the similarities are apparently so intermixed and confusing that he is fain to fall back on the broad generic title of "Hindu"—however unscientific he may thereby stand confessed. Amongst a vast number of Hindu temples the following may be mentioned as particularly worthy of study:—Those at Mukteswara and Bhuvanewar in Orissa, at Khajuraho, Bindrabun, Udaipur, Benares, Gwalior, &c. The palace of the Hindu Raja Man Singh at Gwalior is one of the most beautiful architectural examples in India. So also are the palaces of Amber, Datia, Uraha, Dig and Udaipur.

Indo-Saracenic.

Among all the periods and styles in India the characteristics of none are more easily recognizable than those of what is generally called the "Indo-Saracenic" which developed after the Mahomedan conquest. Under the new influences now brought to bear on it the architecture of India took on a fresh lease of activity and underwent remarkable modifications. The dome, not entirely an unknown feature hitherto, became a special object of development, while the arch, at no time a favourite constructional form of the Hindu builders, was now forced on their attention by the predilections of the ruling class. The minaret also became a distinctive feature. The requirements of the new religion,—the mosque with its wide spaces to meet the needs of organized congregational acts of worship—gave opportunities for broad and spacious treatments that had hitherto been to some extent denied. The Moslem hatred of idolatry set a tabu on the use of sculptured representations of animate objects in the adornment of the buildings, and led to the development

of other decorative forms. Great ingenuity came to be displayed in the use of pattern and of geometrical and foliated ornament. This Moslem trait further turned the attention of the builders to a greater extent than before to proportion, scale and mass as means of giving beauty, mere richness of sculptured surface and the aesthetic and symbolic interest of detail being no longer to be depended on to the same degree.

The art was thus the gainer by the new conditions. It gained in power and variety much as "Classic" architecture gained under the Romans. But it equally lost something too. The Indo-Saracenic is apt to appear cold and hard. The writer was impressed by this on his first view of the Gwalior palace already mentioned. Though a Hindu building that palace has yet much of what might be called the more sophisticated quality of the Indo-Saracenic work as well as some similarity of detail. It has, being Hindu, a certain amount of sculptured ornament of animated forms, and the general effect of roundness, richness and interest thereby imparted seemed eloquent in suggestion as to what is lacking in so many of the Mahometan buildings.

Foreign Influence.

There would appear to be a conflict between archaeologists as to the extent of the effect on Indian art produced by foreign influence under the Mahometans. The extreme view on the one hand is to regard all the best of the art as having been due to foreign importation. The Gandharan sculptures with their Greek tendency, the development of new forms and modes of treatment to which allusion has been made, the similarities to be found between the Mahometan buildings of India and those of North Africa and Europe, the introduction of the minaret and, above all, the historical evidences that exist of the presence in India of Europeans during Mogul times, are cited in support of the theory. On the other hand those of the opposite school hold the foregoing view to be due to the prevailing European preconception that all light and leading must come by way of Europe, and the best things in art by way of Greece. To them the Gandharan sculpture, instead of being the best, is the worst in India even because of its Greek tincture. They find in the truly indigenous work beauties and significances not to be seen in the Græco-Bactrian sculptures, and point to those of Borobudai in Java, the work of Buddhist colonists from India, wonderfully preserved by reason of an immunity from destructive influences given by the insular position, as showing the best examples of the art extant. It is probable that a just estimate of the merits of the controversy, with respect to sculpture at any rate, cannot be formed till time has obliterated some of the differences of taste that exist between East and West.

To the adherents of the newer school the undisputed similarities between Indo-Mahometan and Hindu buildings outweigh those between Indian and Western Mahometan work, especially in the light of the dissimilarities between the latter. They admit the changes produced by the advent of Islam,

but contend that the art, though modified, yet remained in its essence what it had always been, indigenous Indian. The minaret, the dome, the arch, they contended, though developed under the Moslem influence, were yet, so far as their detailed treatment and craftsmanship are concerned, rendered in a manner distinctively Indian. Fergusson is usually regarded as the leader of the former school, while the latter and comparatively recent school has at present found an eager champion in Mr. E. B. Havell, whose works, on the subject are recommended for study side by side with those of the former writer. Mr. Havell practically discards Fergusson's racial method of classification into styles in favour of a chronological review of what he regards to a greater extent than did his famous precursor as being one continuous homogeneous Indian mode of architectural expression, though subject to variations from the influences brought to bear upon it and from the varied purposes to which it was applied.

Agra and Delhi.

Agra and Delhi may be regarded as the principal centres of the Indo-Saracenic style—the former for the renowned Taj Mahal, for Akbar's deserted capital of Fatehpur Sikri, his tomb at Secundra, the Moti Masjid and palace buildings at the Agra fort. At Delhi we have the great Jumma Masjid, the Fort, the tombs of Humayun, Sufiar Jung, &c., and the unique Qutb Minar. Two other great centres may be mentioned, because in each there appeared certain strongly marked individualities that differentiated the varieties of the style there found from the variety seen at Delhi and Agra, as well as that of one from that of the other. These are Ahmedabad in Gujarat and Bijapur on the Dekhan, both in the Bombay Presidency.

Ahmedabad.

At Ahmedabad with its neighbours Sirkhej and Champanir there seems to be less of a departure from the older Hindu forms, a tendency to adhere to the lintel and bracket rather than to have recourse to the arch, while the dome though constantly employed, was there never developed to its full extent as elsewhere, or carried to its logical structural conclusion. The Ahmedabad work is probably most famous for the extraordinary beauty of its stone "jali"—or pierced lattice-work, as in the palm tree windows of the Sidi Sayyid Masjid.

Bijapur.

The characteristics of the Bijapur variety of the style are equally striking. They are perhaps more distinctively Mahomedan than those of the Ahmedabad buildings in that here the dome is developed to a remarkable degree, indeed the tomb of Mahmud—the well-known "Gol Gumbaz"—is cited as shewing the greatest space of floor in any building in the world roofed by a single dome, not even excepting the Pantheon. The lintel also was here practically discarded in favour of the arch. The Bijapur style shows a bold masculine quality and a largeness of structural conception that is unequalled elsewhere in India, though in richness and delicacy it does not attempt to rival the work of the further North. In this we recognize among other influences

that of the prevailing material, the hard uncompromising Dekhan basalt. In a similar manner the characteristics of the Ahmedabad work with its greater richness of ornamentation are bound up with the nature of the Gujarat freestone, while at Delhi and Agra the freer

choice of materials available—the local red and white sandstones, combined with access to marble and other more costly materials—was no doubt largely responsible for the many easily recognizable characteristics of the architecture of these centres.

II. MODERN.

The modern architectural work of India divides itself sharply into two classes. There is first that of the indigenous Indian "Master-builder" to be found chiefly in the Native States, particularly those in Rajputana. Second there is that of British India, or of all those parts of the peninsula wherever Western ideas and methods have most strongly spread their influence, chiefly, in the case of architecture, through the medium of the Department of Public Works. The work of that department has been much animadverted upon as being all that building should not be, but, considering it has been produced by men of whom it was admittedly not the *metier*, and who were necessarily contending with lack of expert training on the one hand and with departmental methods on the other, it must be conceded that it can show many notable buildings. Of recent years there has been a tendency on the part of professional architects to turn their attention to India, and a number of these have even been drafted into the service of Government as the result of a policy initiated in Lord Curzon's Viceroyalty. In time, therefore, and with the growth of the influence of these men, such of the reproach against the building of the British in India as was just and was not merely thoughtlessly maintained as a corollary to the popular jape against everything official, may gradually be removed. If this is so as to Government work progress should be even more assured in the freer atmosphere outside of official life. Already in certain of the greater cities, where the trained modern architect has established himself, in private practice, there are signs that his influence is beginning to be felt. He still complains, however, that the general public of India needs much educating up to a recognition of his value, both in a pecuniary sense and otherwise. It is also to be observed that the survival of a relic of the popular idea of the time before his advent, to the effect that though an architect might occasionally "design" a building it was always an engineer who built it, is still indicated by the architect in some cases deeming it advisable to style himself "architect and engineer."

To the work of the indigenous "master-builder" public attention has of recent years been drawn with some insistence, and the suggestion has been pressed that efforts should be directed towards devising means for the preservation of what is polited out—and now universally acknowledged—to be a remarkable survival—almost the only one left in the world—of "living art," but which is threatened with gradual extinction by reason of the spread of Western ideals and fashions. The matter assumed some years ago the form of a mild controversy centring round the question of the

then much discussed project of the Government of India's new capital at Delhi. It was urged that this project should be utilised to give the required impetus to Indian art rather than that it should be made a means of fostering European art which needed no such encouragement at India's expense. The advocates of this view appear for the most part to have been adherents of the "indigenous Indian" school of archaeologists already mentioned, and to have based their ideas on their own reading of the past. They still muster a considerable following not only amongst the artistic public of England and India, but even within the Government services. Their opponents, holding what appears to be the more official view both as to archaeology and art, have pointed to the "death" of all the arts of the past in other countries as an indication of a natural law, and deprecate as waste of energy all efforts to resist this law, or to institute what they have termed "another futile revival." The British in India they contend, should do as did the ancient Romans in every country on which they planted their conquering foot. As those were wont to replace indigenous art with that of Rome, so should we set our seal of conquest permanently on India by the erection of examples of the best of British art. This is the view which, as we have indicated, appears to have obtained for the moment the more influential hearing, and the task of designing and directing the construction of the principal buildings in the new Capital has accordingly been entrusted jointly to a London and to a South African architect, neither of whom can be unduly influenced by either past or recent architectural practice so far as India is concerned.

The results cannot but be awaited with the keenest interest, and meanwhile the controversy, with suspended judgment, naturally falls into abeyance. It is, moreover, however vital to the interests of the country's architecture, too purely technical and academic for its merits to be estimated by the general reader or discussed here. Its chief claim on our attention lies in the fact that it affords an added interest to the tourist, who may see the fruits of both schools of thought in the various modern buildings of British India as well as examples of the "master builders" work in nearly every native town and bazaar. The town of Lashkar in Gwallior State may be cited as peculiarly rich in instances of picturesque modern Indian street architecture, while at Jaipur, Udaipur, Benares, etc., this class of work may be studied in many different forms both civil and religious. The extent to which the "unbroken tradition from the past" exists may there be gauged by the traveller who is architect enough for the purpose.

Archæology.

The archaeological treasures of India are as varied as they are numerous. Those of the pre-Muhammadan period may roughly be divided into (1) architectural and sculptural monuments and (2) inscriptions. No building or sculpture in India with any pretensions to be considered an example of architecture or art can be ascribed to a time earlier than that of Asoka (circa 250 B.C.). In the pre-Asoka architecture of India, as in that of Burma or China at the present day, wood was solely or almost solely employed. Even at the close of the 4th century, B.C., Megasthenes, the Greek Ambassador at the court of Chandragupta, grandfather of Asoka, describes Pataliputra, the capital of the Indian monarch, as "surrounded by a wooden wall pierced with loop-holes for the discharge of arrows." If the capital itself was thus defended, we can easily infer that the architecture of the period was wooden. And long after stone was introduced the lithic styles continued to be influenced by, or copied from, the wooden.

Monumental Pillars.—The first class of works that we have to notice are the monumental pillars, known as *lals*. The oldest are the monolithic columns of Asoka, nearly thirty in number, of which ten bear his inscriptions. Of these the Lauriya-Nandangarh column in the Champaran District, Tirhut, is practically uninjured. The capital of each column, like the shaft, was monolithic, and comprised three members, *viz.*, a Persepolitan bell, abacus, and crowning sculpture in the round. By far the best capital of Asoka's time was that exhumed at Sarnath near Benares. The four lions standing back to back on the abacus are carved with extraordinary precision and accuracy. Of the post-Asokan period one pillar (B.C. 150) stands to the north-east of Benares in the Gwalior State, another in front of the cave of Karli (A.D. 70), and a third at Eran in Central Provinces belonging to the 5th Century, A. D. All these are of stone; but there is one of iron also. It is near the Qutb Minar at Delhi, and an inscription on it speaks of its having been erected by a king called Chandra, identified with Chandragupta II. (A.D. 375-413) of the Gupta dynasty. It is wonderful to find the Hindus at that age forging a bar of iron larger than any that have been forged even in Europe to a very late date, and not frequently even now." Pillars of later style are found all over the country, especially in the Madras Presidency. No less than twenty exist in the South Kanara District. A particularly elegant example faces a Jaina temple at Mudabidri, not far from Mangalore.

Topes.—*Stupas*, known as *dagabas* in Ceylon and commonly called Topes in North India, were constructed either for the safe custody of relics hidden in a chamber often near the base or to mark the scene of notable events in Buddhist or Jaina legends. Though we know that the ancient Jains built *stupas*, no specimen of Jaina *stupas* is now extant. Of those belonging to the Buddhists, the great Tope of Sanchi in Bhopal, is the most intact and entire of its class. It consists of a low circular drum supporting a hemispherical dome of less diameter. Round the drum is an open passage for circum-

ambulation, and the whole is enclosed by a massive stone railing with lofty gates facing the cardinal points. The gates are essentially wooden in character, and are carved, inside and out, with elaborate sculptures. The *stupa* itself probably belonged to the time of Asoka, but as Sir John Marshall's recent explorations have conclusively shown, the railing and the gateways were at least 150 and 200 years later, respectively. Other famous Buddhist *stupas* that have been found are those of Bharhut between Allahabad and Jubbulpore, Amravati in the Madras Presidency, and Piprahwa on the Nepalese frontier. The tope proper at Bharhut has entirely disappeared, having been utilised for building villages, and what remained of the rail has been removed to the Calcutta Museum. The bas-reliefs on this rail which contain short inscriptions and thus enable one to identify the scenes sculptured with the *Jatakas* or Birth Stories of Buddha give it a unique value. The *stupa* at Amravati also no longer exists, and portions of its rail, which is unsurpassed in point of elaboration and artistic merit, are now in the British and Madras Museums. The *stupa* at Piprahwa was opened by Mr. W. C. Peppe in 1893, and a steatite or soap-stone reliquary with an inscription on it was unearthed. The inscription, according to many scholars, speaks of the relics being of Buddha and enshrined by his kinsmen, the Sakyas. And we have thus here one of the *stupas* that were erected over the ashes of Buddha immediately after his demise.

Caves.—Of the rock excavations which are one of the wonders of India, nine-tenths belong to Western India. The most important groups of caves are situated in Bhaja Bedsa, Karli, Kanheri, Junnar, and Nasik in the Bombay Presidency, Ellora and Ajanta in Nizam's Dominions, Barabar 18 miles north of Gaya, and Udayagiri and Khandagiri 20 miles from Cuttack in Orissa. The caves belong to the three principal sects into which ancient India was divided, *viz.*, the Buddhists, Hindus and Jainas. The earliest caves so far discovered are those of Barabar which were excavated by Asoka and his grandson Dasaratha, and dedicated to Ajivikas, a naked sect founded by Makkhali Gosala. This refutes the theory that cave architecture was of Buddhist origin. The next earliest caves are those of Bhaja, Pitalkhora and cave No. 9 at Ajanta and No. 19 at Nasik. They have been assigned to 200 B.C. by Fergusson and Dr. Burgess. But there is good reason to suppose from Sir John Marshall's recent researches and from epigraphic considerations that they are considerably more modern. The Buddhist caves are of two types—the *chaityas* or chapel caves and *viharas* or monasteries for the residence of monks. The first are with vaulted roofs and horse-shoe shaped windows over the entrance and have interiors consisting of a nave and side aisles with a small *stupa* at the inner circular end. They are thus remarkably similar to Christian basilicas. The second class consist of a hall surrounded by a number of cells. In the later *viharas* there was a sanctum in the centre of the back wall containing a large image of Buddha. Hardly a *chaitya* is found without one or more *viharas* adjoining it. Of the Hindu cave tem-

ples that at Elephanta near Bombay is perhaps the most frequented. It is dedicated to Siva and is not earlier than the 7th century A.D. But by far the most renowned cave-temple of the Hindus is that known as Kallasa at Ellora. It is on the model of a complete structural temple but carved out of solid rock. It also is dedicated to Siva and was excavated by the Rashtrakuta king, Krishna I. (A. D. 768), who may still be seen in the paintings in the ceilings of the upper porch of the main shrine. Of the Jaina caves the earliest are at Khandgiri and Udayagiri; those of the mediæval type, in Indra Sabha at Ellora; and those of the latest period, at Ankal in Nasik. The ceilings of many of these caves were once adorned with fresco paintings. Perhaps, the best preserved among these are those at Ajanta, which were executed at various periods between 350-650 A.D. and have elicited high praise as works of art. Copies were first made by Major Gill, but most of them perished by fire at the Crystal Palace in 1866. The lost ones were again copied by John Griffiths of the Arts School, Bombay, half of whose work was similarly destroyed by a fire at South Kensington. They were last copied by Lady Herringham during 1909-11. Her pictures, which are in full scale, are at present exhibited at the Indian Section of the Victoria and Albert Museum, South Kensington, and have been reproduced in a volume brought out by the India Society.

Gandhara Monuments.—On the north-west frontier of India, anciently known as Gandhara, are found a class of remains, ruined monasteries and buried *stupas*, among which we notice for the first time representations of Buddha and the Buddhist pantheon. The free use of Corinthian capitals, friezes of nude Erotes bearing a long garland, winged Atlantes without number, and a host of individual motifs clearly establish the influence of Hellenistic art. The mound at Peshawar, locally known as Shah-ji-ke-Dheri, which was explored in 1909, brought to light several interesting sculptures of this school together with a reliquary casket, the most remarkable bronze object of the Gandhara period. The inscription on the casket left no doubt as to the mound being the *stupa* raised over the bones of Buddha by the Indo-Scythian king Kanishka. They were presented by Lord Minto's Government to the Buddhists of Burma and are now enshrined at Mandalay. To about the same age belong the *stupas* at Manikyal in the Punjab opened by Ranjit Singh's French Generals, Ventura and Court, in 1830. Some of them contained coins of Kanishka.

Structural Temples.—Of this class we have one of the earliest examples at Sanchi, and another at Tigowa in the Central Provinces. In South India we have two more examples, *viz.*, Lad Khan and Durga temples at Ahole in Bijapur. All these belong to the early Gupta period and cannot be later than 500 A.D. The only common characteristic is flat roofs without spires of any kind. In other respects they are entirely different and already here we mark the beginning of the two styles, Indo-Aryan and Dravidian, whose differences become more and more pronounced from the 7th century onwards. In the Indo-Aryan style, the most prominent lines tend to the perpendicular, and in the

Dravidian to the horizontal. The salient feature of the former again is the curvilinear steeple, and of the latter, the pyramidal tower. The most notable examples of the first kind are to be found among the temples of Bhuvaneshwar in Orissa, Khajarah in Bundelkhand, Osia in Jodhpur, and Dilwara on Mount Abu. One of the best known groups in the Dravidian style is that of the Mamallapuram Baths, of 'Seven Pagodas', on the seashore to the south of Madras. They are each hewn out of a block of granite, and are rather models of temples than *raths*. They are the earliest examples of typical Dravidian architecture, and belong to the 7th century. To the same age has to be assigned the temple of Kailasanath at Conjevaram, and to the following century some of the temples at Ahole and Pattadakal of the Bijapur District, Bombay Presidency, and the monolithic temple of Kallasa at Ellora, referred to above. Of the later Dravidian style the great temple at Tanjore and the Srirangam temple of Trichinopoly are the best examples.

Intermediate between these two main styles comes the architecture of the Deccan, called Chalukyan by Fergusson. In this style the plan becomes polygonal and star-shaped instead of quadrangular; and the high-storeyed spire is converted into a low pyramid in which the horizontal treatment of the Dravidian is combined with the perpendicular of the Indo-Aryan. Some fine examples of this type exist at Dambal, Ratthali, Tiliwalli and Hangal in Dharwar, Bombay Presidency, and at Itagi and Warangal in Nizam's Dominions. But it is in Mysore among the temples at Halebid, Belur, and Somnathpur that the style is found in its full perfection.

Inscriptions.—We now come to inscriptions, of which numbers have been brought to light in India. They have been engraved on varieties of materials, but principally on stone and copper. The earliest of these are found incised in two distinct kinds of alphabet, known as Brahmi and Kharoshthi. The Brahmi was read from left to right, and from it have been evolved all the modern vernacular scripts of India. The Kharoshthi was written from right to left, and was a modified form of an ancient Aramaic alphabet introduced into the Punjab during the period of the Persian domination in the 5th century B.C. It was prevalent up to the 4th century A.D., and was supplanted by the Brahmi. The earliest dateable inscriptions are the celebrated edicts of Asoka. One group of these has been engraved on rocks, and another on pillars. They have been found from Shahbazgarhi 40 miles north-east of Peshawar to Nigliva in the Nepal Tarai, from Girmar in Kathiawar to Dhauli in Orissa, from Kalsi in the Lower Himalayas to Siddapur in Mysore, showing by the way the vast extent of territory held by him. The reference in his Rock Edicts to the five contemporary Greek Princes, Antiochus II. of Syria, Ptolemy Philadelphus, and so forth is exceedingly interesting, and fixes B.C. 269 as the date of his coronation. His Rumundil pillar inscription, again, discovered in Nepal Tarai, now settles, beyond all doubt, the birth-place of Buddha which was for long disputed. Another noteworthy record is the inscription of the Beemgar pillar. The pillar had been known for a long time, but Sir John

Marshall was the first to notice the inscription on it. It records the erection of this column, which was a Garuda pillar, in honour of the god Vasudeva by one Heliodoros, son of Dion, who is described as an envoy of King Antialcidas of Taxila. Heliodoros is herein called a *Bhagavata*, which shows that though a Greek he had become a Hindu and presumably a Vaishnava. Another inscription worth noticing and especially in this connection is that of Cave No. 10 at Nasik. The donor of this cave, Ushavadata, who calls himself a Saka and was thus an Indo-Scythian, is therein spoken of as having granted three hundred thousand kine and sixteen villages to gods and Brahmans and as having annually fed one hundred thousand Brahmaus. Here is another instance of a foreigner having embraced Hinduism. Thus for the political, social, economical and religious history of India at the different periods the inscriptions are invaluable records, and are the only light but for which we are 'forlorn and blind.'

Saracenic Architecture.—This begins in India with the 13th century after the permanent occupation of the Muhammadans. Their first mosques were constructed of the materials of Hindu and Jain temples, and sometimes with comparatively slight alterations. The mosque called *Adhai-din-ka-jhonpra* at Ajmer and that near the Qutb Minar are instances of this kind. The Muhammadan architecture of India varied at different periods and under the various dynasties, imperial and local. The early Pathan architecture of Delhi was massive and at the same time was characterised by elaborate richness of ornamentation. The Qutb Minar and tombs of Altamash and Ala-ud-din Khilji are typical examples. Of the Sharqi style we have three mosques in Jaunpur with several tombs. At Mandu in the Dhar State, a third form of Saracenic architecture sprung up, and we have here the Jami Masjid, Hoshang's tomb, Jahaz Mahall and Hindsola Mahall as the most notable instances of the secular and ecclesiastical styles of the Malwa Pathans. The Muhammadans of Bengal again developed their own style, and Pandua, Malda, and Gaur teem with the ruins of the buildings of this type, the important of which are the Adina Masjid of Sikandar Shah, the Elakhi mosque, Kadam Rasul Masjid, and so forth. The Bahmani dynasty of Gulbarga and Bidar were also great builders, and adorned their capitals with important buildings. The most striking of these is the great mosque of Gulbarga, which differs from all mosques in India in having the whole central area covered over so that what in others would be an open court is here roofed by sixty-three small domes. "Of the various forms which the Saracenic architecture assumed," says Fergusson, "that of Ahmedabad may probably be considered to be the most elegant." It is notable for its carved stone work; and the work of the perforated stone windows in Sidi Sayyid's mosque, the carved niches of the minars of many other mosques, the sculptured *Mihrabs* and domed and panelled roofs is so exquisite that it will rival anything of the sort executed elsewhere at any period. No other style is so essentially Hindu. In complete contrast with this was the form of architecture employed by the Adil Shahi dynasty of Bijapur.

There is here relatively little trace of Hindu forms or details. The principal buildings now left at Bijapur are the Jami Masjid, Gagan Mahall, Mhtar Mahall, Ibrahim Rauza and mosque and the Gol Gumbaz. Like their predecessors, the Pathans of Delhi, the Moghuls were a great building race. Their style first began to evolve itself during the reign of Akbar in a combination of Hindu and Muhammadan features. Noteworthy among the emperor's buildings are the tomb of Humayun, and the palaces at Fatehpur, Sikri and Agra. Of Jehangir's time his mosque at Lahore and the tomb of Itimad-ud-daula are the most typical structures. "The force and originality of the style gave way under Shah Jahan to a delicate elegance and refinement of detail." And it was during his reign that the most splendid of the Moghul tombs, the Taj Mahal at Agra, the tomb of his wife Mumtaz Mahall, was constructed. The Moti Masjid in Agra Fort is another surpassingly pure and elegant monument of his time.

Archæological Department.—As the archæological monuments of India must attract the attention of all intelligent visitors, they would naturally feel desirous to know something of the Archæological Department. The work of this Department is primarily two-fold, conservation, and research and exploration. None but spasmodic efforts appear to have been made by Government in these directions till 1870 when they established the Archæological Survey of India and entrusted it to General (afterwards Sir) Alexander Cunningham, who was also the first Director-General of Archæology. The next advance was the initiation of the local Surveys in Bombay and Madras three years after. The work of these Surveys, however, was restricted to antiquarian research and description of monuments, and the task of conserving old buildings was left to the fitful efforts of the local Governments, often without expert guidance or control. It was only in 1878 that the Government of India under Lord Lytton awoke to this deplorable condition, and sanctioned a sum of 3½ lakhs to the repair of monuments in United Provinces, and soon after appointed a conservator, Major Cole, who did useful work for three years. Then a reaction set in, and his post and that of the Director-General were abolished. The first systematic step towards recognising official responsibility in conservation matters was taken by Lord Curzon's Government, who established the seven Archæological Circles that now obtain, placed them on a permanent footing, and united them together under the control of the Director-General, provision being also made for subsidising local Governments out of imperial funds, when necessary. The Ancient Monuments Preservation Act was passed for the protection of historic monuments and relics especially in private possession and also for State control over the excavation of ancient sites and traffic in antiquities. Under the direction of Sir John Marshall, Kt., C.I.E., Director-General of Archæology, a comprehensive and systematic campaign of repair has been prosecuted, and the result of it is manifest in the present altered conditions of old buildings. One has only to see for example the Moghul buildings at Agra, Delhi, Lahore and Ajmer, in order to be convinced how the work of careful reconstruction

tion and repair has converted these decayed and desecrated monuments with their modern excrescences into edifices of unrivalled loveliness. Another noteworthy feature of this work has been the rescue of many of these buildings from profane and sacrilegious uses. It is well-known that the superb Pearl Mosque of Jahangir in the Lahore Fort contained a Government treasury, and the Sleeping Hall of Shah Jahan served as a Church for the British troops. At Bijapur two mosques have been recovered, one of which was used as Dak Bungalow and the other as Post Office. The local Kutcherry has now been expelled from the lovely masjid of Sidi Sayyid at Ahmedabad. The Cave temples at Trichinopoly are no longer godowns. Nor has research work been in any way neglected under the new order of things. A unique feature of it for the first time introduced under the guidance and advice of Sir John Marshall has been the scientific excavation of buried sites, such as Sarnath where Buddha preached his first sermon, Kasia or Kusinara where he died, Saheth-Maheth the ancient Sravasti,

Taxila or Takshasila, the seat of the ancient Hindu University, Patna or Pataliputra, the Mauryan capital, Besnagar or the ancient Vidisa, and so forth. The results achieved, especially at the last three places, are of a sensational character. At Taxila Sir John has brought to light the remains of a palace of the Assyrian style and a massive and imposing temple dedicated to Zoroastrian worship and resembling a Greek peripteral temple with the addition of a solid tower of the Likkurat type rising behind the shrine. At Patna Dr. D. B. Spooner has found traces of a Mauryan palace which is an actual replica of the Achaemenian palace at Persepolis. At Besnagar Mr. D. R. Bhandarkar has excavated a temple of Vasudeva of the third century B.C., which proves to be the oldest of all Hindu shrines in India. Among other results of this excavation is the noteworthy discovery that the art of forging steel was practised in India more than two thousand years ago and that mortar was used in the construction of brick masonry at least as early as the third century B.C.

TIDAL CONSTANTS.

The approximate standard time of High Water may be found by adding to, or subtracting from, the time of High Water at London Bridge, given in the calendar, the correction given as below :—

Travel in India.

Thirty years ago, a tour in India was possible only to the wealthy, the leisured and those who had friends in the country. The cost of the journey was very high, the methods of transportation were very slow; and the facilities for travel were so indifferent that he was a bold man who consigned himself to the mercies of the country without a sheet of letters of introduction. Now the mail which is posted in London on Thursday night, reaches Bombay in 14 days, and the passenger can travel by the same route and with the same speed as the mail. A dozen lines have covered the sea route between Europe and India and Ceylon with a plexus of regular services. The Indian Railways provide facilities on the trunk lines unsurpassed by the *trains-de-luxe* of Europe, and the Indian hotel has grown into a really comfortable caravan-sal.

In the touring season, which extends from November to March, there is the attraction of a perfect climate. It is never very hot; in the North indeed it is really cool, it is always fine and fresh and bracing. If there is one country in the world to which that elusive term applies, here we have at the season when the tourist arrives the real "Indian summer." Then there is its infinite variety. India is in no sense a nation and never will be. Its peoples are wide as the Poles asunder, each has its own art, its own architecture, its own customs and its own civilisation. A certain superficial resemblance runs through each; beneath lies a never-ending variety which age cannot wither nor custom stale.

The Grand Tour.—People coming to India for the first time so often ask:—"Where shall I go?" Well, wherever else the tourist may go, whatever else he should leave out, he should omit nothing on the Grand Tour. It is the foolish custom nowadays to sneer at those who follow the beaten tracks, but the visitor who shuns any part of the orthodox journey across India misses what nothing else can repay. **Bombay** is by far the most convenient point of departure, for here "the world end steamers wait," here is one of the finest cities in the British Empire, and here the traveller can best complete his outfit and arrangements. From Bombay stretch northwards the two great trunk lines of India. One, the **Bombay Baroda & Central India Railway**, leads through the pleasant garden of Gujarat to Ahmedabad,

the ancient Moslem capital of the Province containing fine examples of Mahomedans and Jain architecture; thence to Abu for the famous Jain temples of Dilwara, and on to Ajmere, Jaipur and Agra. The other by the **Great Indian Peninsula Railway** carries the tourist over the Western Ghats by a superb mountain railway to Gwalior, whose rock fortress rises like a giant battleship from the plain, and so on to Agra. Of the glories of the Taj Mahal, Agra Fort, and the deserted city of Fatehpur Sikri it were supererogatory to speak. Another easy stage leads to **Delhi** that amazing collection of cities, dominated by the little Ridge where British valour kept the mutinous hordes at bay, and finally drove them from the city by a feat of arms unsurpassed in history. Then from Delhi the East Indian line leads comfortably to Benares, Lucknow and Calcutta with the opportunity of an excursion to Cawnpore, if the spirit moves. The great charm of the Grand Tour is that it reveals the best that India can show. This route has the additional advantage that it fits in with any digressions which the time and purse of the traveller may permit. No one who can spare the time should fail to push northwards from Delhi to Peshawar, where the flower of the army keeps watch and ward over the Khyber, and up the dread Pass to the eyrie where the fort of Ali Masjid bars the way to all invaders. **Calcutta** is the best starting point for Darjeeling, though unfortunately the magnificent mountain panorama visible from there is often obscured at this season by mists. Then from Calcutta two alternatives open. A fine service of mail steamers leads to **Burma**, and one of the unforgettable memories of the East is a voyage down the Irrawaddy from Bhamo or Mandalay to Prome. Again, either direct from Calcutta, or via Burma, is an easy route to **Madras** and by way of Madras and Trichinopoly, with their peerless Hindu temples, back to Bombay, or on through Tuticorin to **Colombo**. But indeed the possibilities of expanding this tour are endless. Bombay is the best centre for the rock temples of Elephanta, Konheri, Karli, Ellora and Ajanta. Calcutta is only a short distance from Puri the one Indian temple where there is no caste, and perhaps the most remarkable Hindu temple in the country. From Calcutta also start the river steamers which thread the steamy plains of Bengal and run to the tea gardens of Assam.

SPECIMEN TOURS

A number of specimen tours in India are given below. They are taken from one of Messrs. Thos. Cook & Son's publications, from which firm further information may be obtained. The

traveller will also find he can obtain assistance from the principal Shipping Agents and Railway Companies, or from Messrs. Cox & Co., Messrs. Grindlay & Co., and Messrs King, King & Co.

	1st Class.	2nd Class Rail, 1st Class Steamer.
FROM BOMBAY TO CALCUTTA.		
<i>Via the North-West Provinces to Calcutta (including side trip from Calcutta to Darjeeling).</i>	Rs. a.	Rs. a.
TOUR I.—From Bombay per B. B. & C. I. Railway via Ahmedabad, Abu Road (for Mount Abu), Ajmer, Jaipur, Delhi, Agra, Cawnpore, Lucknow and Benares to Calcutta, thence to Darjeeling, and back to Calcutta	340 9	170 6
TOUR II.—From Bombay per G. I. P. Railway via Itarsi, Gwalior, Agra, Delhi, Tundia Junction, Cawnpore, Lucknow and Benares to Calcutta, thence to Darjeeling, and back to Calcutta	345 13	172 15
FROM BOMBAY TO COLOMBO.		
<i>Via the North-West Provinces, Calcutta and Southern India to Colombo (including side trip from Calcutta to Darjeeling).</i>		
TOUR III.—From Bombay as in Tour No. I (via B. B. & C. I. Ry., Jaipur and the North-West Provinces) to Calcutta side trip to Darjeeling and back to Calcutta, thence via Khurda Road, for Puri (Jugganath), Madras, Tanjore, Trichinopoly, Madura, Danushkodi and Talaimannar to Colombo	556 6	279 0
TOUR IV.—From Bombay as in Tour No. II (via G. I. P. Ry., Itarsi, Agra and the North-West Provinces) to Calcutta, side trip to Darjeeling and back to Calcutta, thence as in Tour No. III to Colombo (via Southern India)	561 9	281 9
<i>Via the North-West Provinces, Calcutta (including Darjeeling), Burma and Southern India.</i>		
TOUR V.—From Bombay as in Tour No. I (via B. B. & C. I. Ry., Jaipur and the North-West Provinces) to Calcutta, side trip to Darjeeling and back to Calcutta, thence British India Steamer to Rangoon, Rail to Mandalay, Irrawaddy Steamer to Prome, Rail to Rangoon; British India Steamer to Madras, Rail via Tanjore, Trichinopoly, Madura to Danushkodi; Steamer to Talaimannar and Rail to Colombo	752 0	504 0
TOUR VI.—From Bombay as in Tour No. II (via G. I. P. Ry., Itarsi, Agra and the North-West Provinces) to Calcutta, thence as in Tour No. V to Colombo	758 0	507 0
FROM BOMBAY TO RANGOON.		
<i>Via the North-West Provinces and Calcutta to Rangoon (including a tour in Burma, also including a side trip from Calcutta to Darjeeling).</i>		
TOUR VII.—From Bombay as in Tour No. I (via B. B. & C. I. Ry., Jaipur and the North-West Provinces) to Calcutta side trip to Darjeeling and back to Calcutta, thence British India Steamer to Rangoon, Rail to Mandalay, Irrawaddy Steamer to Prome, Rail to Rangoon	560 0	456 0
TOUR VIII.—From Bombay as in Tour II (via G. I. P. Ry., Itarsi, Agra and the North-West Provinces) to Calcutta, side trip to Darjeeling and back to Calcutta, thence British India Steamer to Rangoon. Rail to Mandalay, Irrawaddy, Steamer to Prome, Rail to Rangoon	568 0	460 0

	1st Class.	2nd Class Rail, 1st Class Steamer.
FROM CALCUTTA TO BOMBAY.		
<i>Via the North-West Provinces.</i>		
TOUR IX. —From Calcutta via Benares, Lucknow, Cawnpore, Tundla, Agra, Delhi, Rewari, Jaipur, Ajmer (for Udaipur), Abu Road (for Mt. Abu), Ahmedabad and Baroda to Bombay	231 3	115 11
TOUR X. —From Calcutta via Benares, Moghal Serai, Cawnpore, Tundla, Agra, Delhi, Rewari, Jaipur, Ajmer (for Udaipur), Abu Road (for Mt. Abu) Ahmedabad and Baroda to Bombay	213 8	106 13
TOUR XI. —From Calcutta via Benares, Moghal Serai, Cawnpore, Tundla, Agra, Gwalior and Itarsi to Bombay	187 8	93 13
TOUR XII. —From Calcutta via Benares, Moghal Serai, Cawnpore, Delhi, Muttra, Agra, Gwalior and Itarsi to Bombay	211 14	105 15
CIRCULAR TOUR FROM CALCUTTA.		
TOUR XIII. —From Calcutta via Benares, Lucknow, Cawnpore, Tundla, Agra, Bandikul, Jaipur, Delhi, and Allahabad to Calcutta	208 13	104 8
<i>Extensions, Via Southern India to Colombo.</i>		
TOUR XIV. —From Bombay via Poona, Hyderabad, Wadi, Raichur, Madras, Tanjore, Trichinopoly, Madura, Danushkodi, and Talaimannar to Colombo	224 6	112 15
TOUR XV. —From Bombay via Poona, Hyderabad, Wadi, Guntakal, Bangalore, Erode, Trichinopoly, Madura, Danushkodi, and Talaimannar to Colombo	216 9	108 15
<i>Extensions to above Tours.</i>		
From Ajmer to Udaipur and return	53 8	26 12
From Abu Road to Mount Abu and return, one seat in motor (This excursion is strongly recommended, the scenery being very beautiful)	11 0
From Delhi to Lahore and return via Umballa and Amritsar	84 4	42 2
From Delhi via Bhatinda, Ferozepore to Lahore, returning via Amritsar Umballa to Delhi	79 4	39 10
From Calcutta to Darjeeling and return	109 6	54 11
From Colombo to Kandy and return	16 4	10 3
From Kurda Road to Puri (Jagganath) and return	7 12	3 14

(All fares subject to change without previous notice.)

LIST OF HOTELS IN INDIA.

The following list of hotels is largely based on information kindly supplied by Messrs. Thos. Cook & Son, Bombay:—

AGRA.—Cecil, Laurie's Great Northern, Metro-pole.

AHMEDABAD.—Grand.

ALLAHABAD.—Grand, Central.

BANGALORE.—West End, Cubbon

PIPAL.—A sacred tree, *FICUS RELIGIOSA*.

PIR.—A Mahomedan religious teacher or saint.

PLEADER.—A class of legal practitioner.

PONGYI.—A Buddhist monk or priest, Burma.

POSTIN, poshteen.—A coat or rug of sheepskin tanned with the wool on, Afghanistan.

PRANT.—An administrative sub-division in Maratha States, corresponding to a British District (Baroda) or Division (Gwalior); also in Kathiawar.

PRESIDENCY.—A former Division of British India.

PROTECTED.—Forests over which a considerable degree of supervision is exercised, but less than in the case of 'reserved' forests.

PROVINCE.—One of the large Divisions of British India.

PUJA.—Worship, Hindu.

PUJARI.—The priest attached to a temple.

PUNDIT.—See *Pandit*.

PURANA.—Lit. 'old' Sanskrit (1) applied to certain Hindu religious books, (2) to a geological 'group'; (3) also to 'punch-marked' coins.

PUROHIT.—A domestic chaplain or spiritual guide, Hindu.

PWE.—An entertainment, Burma.

PYALIS.—Bands of revellers who accompany the Muharram processions.

RABI.—Any crop sown after the main South-West monsoon.

RAGI (ELEusine COROCANA).—A small millet used as a food-grain in Western and Southern India; syn. *marua*, Nagli Nachni.

RAJA.—A title borne by Hindus and occasionally by Musalmans, corresponding roughly to that of Nawab which is peculiar to Musalmans.

RAMOSHI.—A caste whose work is watch and ward in the village lands and hence used of any *chaukidar* (q. v.).

RANA.—A title borne by some Rajput chiefs equivalent to that of *Raja*.

RANI.—The wife or widow of a *Raja*.

RAO.—A title borne by Hindus, either equivalent to, or ranking below, that of *Raja*.

REGAR.—Name for a black soil in Central and Southern India, which is very retentive of moisture, and suitable for growing cotton.

REGULATION.—A term formerly applied to certain provinces to show that the Regulations or full code of legislation applied to them.

REH.—Saline or alkaline efflorescences on the surface of the soil, Northern India.

RESERVED.—Forests intended to be maintained permanently.

RICKSHAW.—A one or two seat vehicle on two wheels drawn by coolies, used in the hills.

ROHU.—A kind of fish, LABEO ROHITA.

RYOTWARI.—The system of tenure in which land revenue is imposed on the actual occupants of holdings.

SADR, sudder.—Chief (adjective). Hence the headquarters of a District; formerly applied to the Appellate Courts.

SAFA JANG.—A long-handled battleaxe carried by Jat Sikhs.

SAFFLOWER.—A thistle which yields a yellow dye from its petals and oil from its seeds (*CARTHAMUS TINCTORIUS*), var. *Kardal*, *Kushanti*.

SAL.—A useful timber tree in Northern India, *SHOREA ROBUSTA*.

SAMBAR.—A deer, *CERVUS UNICOLOR*; syn. *sarau*.

SAN.—Bombay hemp, *CROTALARIA JUNCEA*.

SANAD.—(1), A charter or grant, giving its name to a class of States in Central India held under a sanad, (2) any kind of deed of grants.

SANGATHAN.—Literally tying together. A movement which aims at unity and the knowledge of the art of self defence among Hindus. Roughly similar to Fascismo.

SANNYASI.—A Hindu mendicant.

SARI.—A long piece of cloth worn by women as a shawl.

SARANJAM.—Land held revenue free or on a reduced quit-rent in consideration of political services rendered by the holder's ancestors.

SARKAR.—(1) The Government; (2) a tract of territory under Muhammadan rule, corresponding roughly to a Division under British administration.

SARSUBAH.—An officer in charge of a Division in the Baroda State corresponding to Commissioner of British territories.

SATI.—Suicide by a widow, especially on the funeral pyre of her husband.

SATYA GRAHA.—(lit.) One possessed by the truth; one who follows the truth wherever it may lead. (Commonly used to denote the passive resistance movement.)

SAWBWA.—A title borne by chiefs in the Shan States, Burma.

SEMAL or cotton tree.—A large forest tree with crimson flowers and pods containing a quantity of floss, *BOMBAY MALABARICUM*.

SEROW, sarau.—A goat antelope, *NEMORHARDUS RUBALINUS*.

SETTLEMENT.—(1) The preparation of a cadastral record, and the fixing of the Government revenue from land; (2) the local inquiry made before Forest Reserves are created; (3) the financial arrangement between the Government of India and Local Governments

SHAHID—A martyr
SHANBHOG.—See **PATWARI**.

SHASTRA.—The religious law-books of the Hindus.

SHEGADI, seggarce.—A pan on 3 feet with live charcoal in it.

SHER, ser, seer.—A weight, or measure varying much in size in different parts of the country. The Railway ser is about 2 lbs.

SHETH, shethia.—A Hindu or Jain merchant
SHIGURAM.—See **TONGA**.

SHISHAM or *sissu*.—A valuable timber tree, *DALBERGIA SISSOO*.

SHUDDHI.—Literally purification. A movement started in Rajputana and Northern India for the reconversion to Hinduism of those, like the Malakhana Rajputs, who, though Mahomedans for some generations, have retained many Hindu practices.

SILLADAR.—A native trooper who furnishes his own horse and equipment.

SOLA.—A water-plant with a valuable pith, *AESCHYNOMENE ASPERA*.

SOWAR.—A mounted soldier or constable.

STUPA or *tope*.—A Buddhist tumulus, usually of brick or stone, and more or less hemispherical, containing relics.

SUBAH.—(1) A province under Mahomedan rule; (2) the officer in charge of a large tract in Baroda, corresponding to the Collector of a British District; (3) a group of Districts or Division, Hyderabad.

SUBAH DAR.—(1) The governor of a province under Mahomedan rule; (2) a native infantry officer in the Indian Army; (3) an official in Hyderabad corresponding to the Commissioner in British territory.

SUB-DIVISION.—A portion of a District in charge of a junior officer of the Indian Civil Service or a Deputy Collector.

SUPARI.—The fruit of the betel palm, *ARECA CATECHU*.

SUPERINTENDENT.—(1) The chief police officer in a District; (2) the official in charge of a hill station; (3) the official, usually of the Indian Medical Service, in charge of a Central Jail.

SURTI.—Native of Surat, specially used of persons of the Dhed or Mahar caste who work as house servants of Europeans, and whose house speech is Gujarati.

SYCE, sals.—A groom.

TABUT.—See **TAZIAH**.

TAHSIL.—A revenue sub-division of a District; syn. *taluka*, *Bombay*; *taluka*, *Madras* and *Mysore*; township, *Burma*.

TAHSILDAR.—The officer in charge of a *tahsil*; syn. *Mamlatdar*, *Bombay*; township officer or *myo-ok*, *Burma*; *Mukhtilarkar*, *Sind*; *Vahivatdar*, *Baroda*. His duties are both executive and magisterial.

TAKAVI.—Loans made to agriculturists for seed, bullocks, or agricultural improvements; syn. *tagal*, *Bombay*.

TALATI.—See **PATWARI**.

TALAV, or talao.—A lake or tank.

TALUK, taluka.—The estate of a talukdar in Oudh. A revenue sub-division of a District, in Bombay, Madras and Mysore; syn. tahsil.

TALUKDAR.—A landholder with peculiar tenures in different parts of India. (1) An official in the Hyderabad State, corresponding to the Magistrate and Collector (First Talukdar) or Deputy Magistrates and Collectors (Second and Third Talukdars); (2) a landholder with a peculiar form of tenure in Gujarat.

TAMTAM, tumtum.—A North Indian name for a light trap or cart.

TANK.—In Southern, Western, and Central India, a lake formed by damming up a valley; in Northern India, an excavation holding water.

TAPEBAR.—See PATWARI.

TARAI.—A moist swampy tract; the term especially applied to the tract along the foot of the Himalayas.

TARI, toddy.—The sap of the date, palmyra, or cocoanut palm, used as a drink, either fresh or after fermentation. In Northern India the juice of the date is called Sendhi.

TASAR, tussore.—Wild silkworms, *ANTHRAEA PAPPIA*; also applied to the cloth made from their silk.

TAZIA.—Lath and paper models of the tombs of Hasan and Husain, carried in procession at the Muharram festival; syn. tabut.

TEAK.—A valuable timber tree in Southern and Western India and Burma, *TECTONA GRANDIS*.

TELEGRAPHIC TRANSFERS.—See Council bills.

THAGI, thuggee.—Robbery after strangulation of the victim.

THAKUR.—(1) The modern equivalent of the caste name Kshatriya in some parts of Northern India; (2) a title of respect applied to Brahmans; (3) a petty chief; (4) a hill tribe in the Western Ghats.

THAMIN.—The brow-antlered deer, Burma, *CERVUS ELDI*.

THANA.—A police station, and hence the circle attached to it.

TIKA.—(1) Ceremonial anointing on the forehead; (2) vaccination.

TIKAM.—The English pickaxe (of which the word is a corruption).

TIL.—An oilseed, *SESAMUM INDICUM*; also known as gingelly in Madras.

TINDAL, tandel.—A foreman, subordinate officer of a ship.

TIPAI, Teapoy.—A table with 3 legs, and hence used of any small European style table.

TOLA.—A weight equivalent to 180 grains (troy).

TONGA.—A one or two horsed vehicle with a covered top; syn. *SHIKHAM*.

TSINE.—Wild cattle found in Burma and to the southward, *BOS SONDAICUS*; syn. *haing* and *banteng*.

UNIT.—A term in famine administration denoting one person relieved for one day.

URIAL.—A wild sheep in North-Western India, *OVIS VIGNEI*.

URID, UDID.—A pulse, 'black grain,' (*PHASEOLUS MUNGO*).

UMBAR.—A wild pig—(*FICUS GLOMERATA*).

USAR.—Soil made barren by saline efflorescence, Northern India.

VAHIVATDAR.—Officer in charge of a revenue sub-division, with both executive and magisterial functions, Baroda; syn. tahsildar.

VAID or baldya, Bengal.—A native doctor practising the Hindu system of medicine.

YAKIL.—(1) A class of legal practitioner; (2) an agent generally.

VIHARA.—A Buddhist monastery.

VILLAGE.—Usually applied to a certain area demarcated by survey, corresponding roughly to the English parish.

VILLAGE UNION.—An area in which local affairs are administered by a small committee.

WADA or WADI.—(1) an enclosure with houses built round facing a centre yard; (2) private enclosed land near a village.

WAKF.—A Muhammadan religious or charitable endowment.

WAO.—A step well.

WATAN.—A word of many senses. In Bombay Presidency used mostly of the land or cash allowance enjoyed by the person who performs some service useful for Government or to the village community.

WAZIR.—The chief minister at a Mahomedan court.

WET RATE.—The rate of revenue for land assured of irrigation.

YOGI.—A Hindu ascetic who follows the yoga system, a cardinal part of which is that it confers complete control over the bodily functions enabling the practitioner, for instance to breathe in through one nostril and out at the other.

YUNANI.—Lit. Greek; the system of medicine practised by Mahomedans.

ZAMINDAR.—A landholder.

ZAMINDARI.—(1) An estate; (2) the rights of a landholder, zamindar; (3) the system of tenure in which land revenue is imposed on an individual or community occupying the position of a landlord.

ZANANA.—The women's quarters in a house hence private education of women.

ZIARAT.—A Mahomedan shrine, North-Western Frontier.

ZILA.—A District.

Indian Official Reports.

(MOSTLY ANNUAL.)

General.—

Statistical Abstract relating to British India (Parliamentary Paper).

Statistics of British India:—

- Vol. I.—Commercial.
- Vol. II.—Financial.
- Vol. III.—Public Health.
- Vol. IV.—Administrative and Judicial.
- Vol. V.—Educational.

Census Reports (Decennial), India, Provincial and Native States.

Administration Reports: Madras, Bombay, United Provinces, Punjab, Bengal, Central Provinces and Berar, Burma, Bihar and Orissa, Assam, North-West Frontier Province, Delhi, Coorg, Andaman and Nicobar Islands, Civil and Military Station of Bangalore, Ajmer-Merwara, Baluchistan Agency.

Legislation.—

Acts and Proceedings of the Central and Provincial Legislatures; India's Parliament, Vols. 1, 2, 3.

Justice and Police.—

Report on the Administration of Civil Justice for each Province.

Report on the Administration of Criminal Justice for each Province.

Report on Jails for each Province.

Reports on Police, for each Province, and for Bombay Town and Island, Calcutta, and Bangalore.

Report on the working of the Criminal Tribes Act (Bombay, Punjab and United Provinces).

Finance.—

Finance and Revenue Accounts of the Government of India.

East India Financial Statement (Parliamentary Paper).

Return of Net Income and Expenditure for eleven years (Parliamentary Paper).

Accounts and Estimates: Explanatory Memorandum (Parliamentary Paper).

Home Accounts (Parliamentary Paper).

Loans raised in England (Half-yearly Parliamentary Paper).

Loans raised in India (Half-yearly Parliamentary Paper).

Mint Reports for Calcutta and Bombay.

Paper Currency Department Reports, India and Bombay.

Statistics compiled from the Finance and Revenue Accounts.

Land Revenue, &c.—

Land Revenue Administration: Provincial Reports for Lower Provinces (Bengal, Bihar and Orissa, Assam), United Provinces, Bombay Presidency (including Sind), Punjab, Central Provinces and Berar, Burma, and Madras.

Report on Land Revenue Administration, Land Records, Settlement Operations, Alienation of Land Act, &c., for North-West Frontier Province.

Madras Survey, Settlement and Land Records Department Report.

Reports of Land Records Department for Bombay, Burma, Bengal, United Provinces, and Punjab.

Report on Settlement Operations, Punjab.

Reports on Survey and Settlement Operations, Bengal, Bihar and Orissa, and Assam.

Reports on Operations of the Land Records and Settlement Departments, Central Provinces and Berar.

Report of the Talukdari Settlement Officer, Bombay.

Provincial Reports on the Administration of Estates under the Court of Wards.

Report on the Punjab Canal Colonies.

Separate Revenue (Salt, Excise, &c.).—

Salt Department Reports: Northern India, Madras, Bombay, Sind, Bengal, Burma, Bihar and Orissa.

Excise Report for each Province.

Report on the operations of the Opium Department.

Stamp Department Report for each Province. Registration Department Report for each Province.

Income Tax Report for each Province.

Agriculture and Veterinary.—

Report on the Progress of Agriculture in India.

Report of the Agricultural Research Institute and College, Pusa.

Bulletins of the Agricultural Research Institute, Pusa, and of the Provincial Departments of Agriculture.

Memoirs of the Department of Agriculture.

Proceedings of the Board of Agriculture.

Agricultural Journal of India (quarterly).

Reports of the Department of Agriculture for each Province.

Reports on Agricultural Stations, Experimental Farms, and Botanic Gardens for each Province.

Season and Crop Report for each Province.

Agricultural Statistics of India.

Area and Yield of certain Principal Crops.

Report on Production of Tea in India.

Report of the Imperial Agriculturist (1920-21)

Report on Tea Culture in Assam.

Reports of the Civil Veterinary Departments for each Province.

Statistics compiled from the Reports of the Provincial Civil Veterinary Departments.

Report of the Camel Specialist.

Report of the Imperial Bacteriologist (Veterinary).

Co-operative Societies.—

Statements showing Progress of the Co-operative Movement in India.

Reports on Co-operative Societies for each Province.

Reports of Conferences of Registrars of Co-operative Societies, India and Provincial

Fisheries.—

Report of the Fisheries Department, Bengal, Bihar and Orissa, Madras and Punjab

Forests.—

Annual Return of Statistics relating to Forest Administration in British India.
 Report on Forest Administration for each Province.
 Reports of the Forest Research Institute and the Imperial Forest College, Dehra Dun.
 Quinquennial Forest Review.
 Indian Forest Memoirs.
 Indian Forest Records.
 Forest Bulletins.

Industries.—

Journal of Indian Industries and Labour.
 Bulletin of Indian Industries and Labour.
 Reports of Provincial Directors of Industries.

Mineral Production and Inspection of Mines.—

Review of Mineral Production (in Records of Geological Survey).
 Report on Production and Consumption of Coal in India.
 Report of the Chief Inspector of Mines.

Trade and Manufactures.—

Annual Statements of Sea-borne Trade and Navigation, India and Provincial (Madras, Bombay, Sind, Bengal, Bihar and Orissa, Burma).
 Review of the Trade of India (Parliamentary Paper).
 Tables of the Trade of India (Parliamentary Paper).
 Provincial Reports on Maritime Trade and Customs (including working of Merchandise Marks Act) for Bengal, Bihar and Orissa, Bombay, Sind, Madras, and Burma.
 Accounts relating to the Sea-borne Trade and Navigation of British India (monthly and for Calendar Year).
 Accounts relating to the Trade by Land of British India with Foreign Countries (monthly).
 Annual Statement of Coasting Trade of British India.
 Report on the Trade and Navigation of Aden.
 Accounts of Trade carried by Rail and River in India.
 Report on Inland, Rail-borne, or Rail-and-River-borne Trade for each Province.
 External Land Trade Reports for Bengal, Bihar and Orissa, Assam, Burma, United Provinces, Punjab, North-West Frontier Province, Sind, and British Baluchistan.
 Indian Trade Journal (weekly).
 Statistics relating to Joint-Stock Companies in British India and Mysore.
 Report on the working of the Indian Companies Act for each Province.
 Report on the working of the Indian Factories Act for each Province.
 Report of the Chief Inspector of Explosives.

Public Works.—

Administration Report on Railways.
 Reports on Public Works (Buildings and Roads), for Madras, Bombay, Punjab, North-West Frontier Province, and Burma.
 Review of Irrigation.
 Report on Irrigation Revenue for each Province (except Madras).
 Administrative Reports on Irrigation, Madras and Bombay.
 Report on Architectural Work in India.

Posts and Telegraphs.—

Reports on the Posts & Telegraphs of India.
 Report of Indo-European Telegraph Department.

Scientific Departments.—

Report on the Operations of the Survey of India.
 Records of the Survey of India.
 Records and Memoirs of the Geological Survey of India.
 Report of the Indian Meteorological Department.
 Indian Weather Review, Annual Summary.
 Rainfall data of India.
 Memoirs of the Indian Meteorological Department.
 Report of the Meteorologist, Calcutta.
 Report of the Director-General of Observatories.
 Memoirs and Bulletins of the Kodaikanal Observatory.
 Report of the Board of Scientific Advice.
 Report of the Archaeological Survey of India and Provincial Reports.
 Report and Records of the Botanical Survey.

Education.—

Education Reports for India and each Province.
 Quinquennial Review of Education (Parliamentary Paper).

Local Self-Government.—

Reports on Municipalities for each Province and for Calcutta, Bombay City, Madras City, and Rangoon.
 Report on District and Local Boards or Local Funds for each Province.
 Reports of Port Trusts of Calcutta, Bombay, Madras, Rangoon, Karachi, and Aden.

Medical, Sanitary, and Vital Statistics.—

Report of the Sanitary Commissioner with the Government of India.
 Report on Sanitary Measures in India (Parliamentary Paper).
 Report of the Sanitary Commissioner for each Province.
 Vaccination Report for each Province.
 Report on Civil Hospitals and Dispensaries for each Province.
 Report on Lunatic Asylums for each Province.
 Report of the Chemical Examiner and Bacteriologist for each Province.
 Scientific Memoirs by Officers of the Medical and Sanitary Departments.
 Reports of the All-India Sanitary Conferences.

Reports of the Imperial Malaria Conferences.
 Indian Journal of Medical Research (Quarterly).

Emigration and Immigration.—

Calcutta Port Emigration Report.
 Bengal Inland Emigration Report.
 Assam Immigration Report.

Prices and Wages.—

Prices and Wages in India.
 Variations in Indian Price Levels.
 Reports of Provincial Wage Commissions.

Political Writings.—

Gandhi and Anarchy by Sir Sankaran Nair.
 Indian Unrest by Alfred Nundy.
 Revolution or Evolution.

Bibliography of India.

The general work of reference in one compact volume about India is still the late Sir William W. Hunter's *The Indian Empire: Its Peoples, History and Products* (Smith Elder, 1893, 28/-) which contains within its 800 pp. all the information, excellently arranged and indexed, that the general reader requires about this country. Its historical sections are particularly good giving a rapid and comprehensive bird's-eye-view of the course of Indian history from the advent of the Mahomedans in the eighth century down to nearly the close of the nineteenth century. Its statistics are based on the Census of 1891 and are therefore somewhat out of date. But, with this slight drawback which can be remedied by consulting the latest annual "Statistical Abstract" (see below), it gives in the compass of one volume a comprehensive view, neither too blurred nor too diffuse, of the Indian Empire and its past and present state. A more detailed account of India is to be found in the first four volumes of *The Imperial Gazetteer of India* (Clarendon Press, 1901 Vols. I-IV, 6/- each). These volumes, which are introductory to the alphabetical Gazetteer (Vols. V-XXIV), are an expansion of Hunter's one volume work mentioned above; but all the chapters, with the exception of those on the history of British Rule, have been rewritten by expert writers who have been in most cases Indian administrators also. The statistics in these volumes are based on the Census of 1901. The second volume of the *Oxford Survey of the British Empire* (Clarendon Press, 1914, 15/-) is mostly devoted to India and contains an excellent concise account by various well known writers of the Indian Empire as it is to-day. The statistics of this volume are based on the latest Census of 1911. Sir Thomas Holdich's volume on *India in the "Regions of the World"* Series (Clarendon Press, 1904, 10/6) is a compact geographical account by an authoritative writer. The same author's *Gates of India* (Macmillan, 12 s. 6d.) is a useful historical and geographical work on the North-West Frontier of India. A short account of the problems of India's frontiers and their defence is given in Arthur Vincent's *defence of India* (Oxford University Press). Rs. 2 Dr. George Smith's *Student's Manual of the Geography of British India* (Murray, 1882, 7/6) may still be used with profit, though parts of it are obsolete. Sir Thomas Holderness (fourth) edition, 1911, of Sir John Strachey's *India*, originally published in 1888, contains the best, succinct account of Indian administration and progress (Macmillan, 1911, 10/-). The same editor's little book in the Home University Library, *Peoples and Problems of India* (Williams and Norgate, 1912, 1/-) is a useful introduction to the study of present day India. A very good *Atlas of India* is published as Vol. XXVI of the *Imperial Gazetteer* (separately, 17/6 Clarendon Press, 1909). It contains 28 general and 18 provincial maps besides 16 plans of Cities, including 3 of Bombay, 2 of Calcutta and 1 of Madras, Delhi, Simla, etc., each. A somewhat older though still excellent atlas is *Constable's Hand Atlas of India* (Constable, 1893, 14/-). It has 60 maps and plans and is accompanied by an index of 86 pp. The

companion volume *Hand Gazetteer of India* by Jas. Bartholomew (Constable, 1891, 12/-) is a very concise gazetteer based on the second edition of 1890 of Hunter's *Imperial Gazetteer*. An older and fuller gazetteer, though still having the advantage of being in one compact volume, is Lethbridge and Wollaston's revised abridgment of *Thornton's Gazetteer of India* (W. H. Allen, 1888, 21/-).

Official Publications.—The principal official publications of general interest and utility are the Annual Reviews (*India in 1920* is the latest) by Mr. L. F. Rushbrook Williams, published by the Government of India and their accompaniment. *The Statistical Abstract for British India* (issued towards the close of the year, about 1/6); the report on the Census of 1911 (Vol. I, Calcutta, Rs. 5, Text, Vol. II, Appendix giving tables, etc.); *Statistics of British India* (4 Vol., Calcutta) Administrative, Judicial, &c., annual *Statement of the Trade of British India with Foreign Countries*, (Calcutta) and the annual *Review of Trade* (Eyre and Spottiswoode, 2/-); *Financial Statement of the Government of India* (Eyre and Spottiswoode). Every ten years is issued an elaborate review of the period as a Decennial number of the Moral and Material blue-book (now discontinued) and those by J. S. Cotton (pub. 1885) and by Sir Athelstane Baines (pub. 1894) are specially valuable. A "Memorandum on some of the Results of Indian Administration during the past Fifty Years of British Rule in India" issued in 1909 by the India Office (reprinted at Government Press, Calcutta, 1911, six annas, in a handy octavo) is a valuable summary of the improvements since 1858.

History.—It is still the fashion to call James Mill's *History of British India* (Vols. I-VI up to 1805; continuation by H. H. Wilson, Vols. VII-IX, index Vol. X., last ed. 1858, W. H. Allen) the standard work on the subject, but it is out of date and in parts wrong-headed. No other author of equal ability and repute has treated the subject on a large scale with the exception of Mr. Vincent Smith whose *Oxford History of India* has become the standard work. It is a handy volume copiously illustrated, (Clarendon Press, 1920, 12-6). Sir W. W. Hunter made the attempt but lived only to write two volumes dealing with the first century of the English in India up to 1700. (History of British India, Vols. I-II, 1899-1900, Longmans, 30/-). A masterly historical sketch of the whole period is to be found in Sir Alfred Lyall's *British Dominion in India*, (Murray, 1894, latest ed. 1907, 5/-) which is specially remarkable for the writer's theory that the British dominion in India grew and expanded on a regular plan foreseen by its founders and was not as is generally supposed the result of a happy chance. Another excellent and interesting sketch is contained in the *Historical Geography of India* by P. E. Roberts, who had assisted Hunter in the above mentioned work (Clarendon Press, 1920, 8/6). Miss Gabrielle Festing's two works, *When Kings Rode to Delhi* (Blackwood, 1912, 7/6) and *Strangers Within the Gates* (Blackwood, 1914, 7/6) give a popular

but accurate presentation of the Mughal and British periods. Marshman's *History of India* (3 Vols., Longmans, 1871, 22-6) gives an excellent account, neither too detailed nor too concise, of the whole history and may be recommended as the most readable history of India till the Mutiny. There is an abridgment of Marshman in one volume (Blackwood, 6/-). Trotter's *History of India*, recently revised and brought up to date by W. H. Hutton (S. P. C. K., 1917, 10/-) is a good and accurate compendium, as also is Meadows Taylor's *Students' Manual of Indian History* (Longmans, 7/6) which has long been well known for presenting a vast amount of facts in a small compass and in an agreeable style. For the Mahomedan period the standard work is Elphinstone's *History of India* (Murray, 16/-). A much more elaborate work for the same period is Sir Henry Elliot and Jas Dowson's *History of India as told by its own Historians* (8 Vols., 1867-1877, £ 8-8-0) giving translations of the chief Mahomedan historians. For the pre-Mahomedan period Vincent Smith's *Early History of India* (Clarendon Press, 3rd ed., 1914, 16/-) is the latest and best work. Mr. Vincent Smith is also the author of *The Oxford History of India*, from the earliest times to the end of 1911 (Clarendon Press, 12/8). Romesh Dutt's *History of Ancient Civilisation in India* (2 Volumes, Trubner's Oriental Series, 21/-, 1893) and Mrs. Manning's earlier work *Ancient and Medieval India* (2 Vols., 1869, 30/-, W. H. Allen) deal mainly with literature rather than history proper though they give a more or less vivid picture of those early times. The following books, which are published by the Clarendon Press, are of particular interest. *Hindu Manners, Customs and Ceremonies* by J. A. Dubois: The Abbe Dubois lived for many years amongst the people of S. India and gained an extraordinary insight of their customs and habits (6s.). *Travels in the Mogul Empire, 1636-68* by Francis Bernier (7s. 6d.), *Observations of the Mussulmans of India made during twelve years' residence in their immediate society* by Mrs. Meer Hassan Ali, an Englishwoman who married an Indian Mahomedan (7s. 6d.), *Reminiscences and Recollections of an Indian Official* by Major-General Sleeman (6s.), *Annals and Antiquities of Rajasthan* in 3 volumes (52s. 6d.), *The Story of My Life* by Col. Meadows Taylor, (16s.), *Early Travels in India, 1583-1619*, by William Foster, C.I.E., (10s. 6d.), *The Rites of the Twice Born* by Mrs. Sinclair Stevenson, the latest and best book on the Brahman Caste (21s.), *A History of the Maratha People*, by G. A. Kincaid and R. Parasnis (10s.).

Historical Biography.—The principal characters of Indian history, Hindu Mahomedan and British such as Asoka, Babar, Akbar, Clive, Warren Hastings, Dalhousie, etc., are individually treated in the well known *Rulers of India* series of historical and biographical monographs (28 Vols., Clarendon Press, 1890-1902, 2/6 each). In the English *Men of Action* series (Macmillan, 2/6 each) there are also volumes on famous Anglo-Indian statesmen, such as Sir Alfred Lyall's *Warren Hastings*, Archibald Forbes' *Havelock*, Sir Richard Temple's *Lord Lawrence*, Sir W. Butler's *Charles Napier*. Among biographies of Anglo-Indian worthies may be mentioned as especially interesting and valuable Sir George Forrest's *Life of Lord Clive*

(Cassell, two vols., 1919), Col. Malletson's *Warren Hastings* (Chapman and Hall, 1894, 16/-), Bosworth Smith's *Lord Lawrence* (2 Vols., Smith Elder, 1882, new ed., Nelson's series, 1/-). Herbert Edwardes and Merivale's *Sir H. Lawrence* (2 Vols., Smith Elder 1872), Sir W. Hunter's *Lord Mayo* (2 Vols., Smith Elder, 1875, 24/-), Sir W. Lee Warner's *Lord Dalhousie* (2 Vols., Macmillan, 1904, 25/-), Sir Alfred Lyall's *Lord Dufferin* (2 Vols., Murray, 1905, new ed., Nelson's series 1/-), Marshman's *Sir H. Havelock* (Longmans, 3/6), Martineau's *Sir Bartle Frere* (2 Vols., Murray, 1895, 32/-), Mallet's *Earl of Northbrook* (Longmans, 1910, 16/-), Lord Roberts' *Forty-one Years in India* (Macmillan, 1897, new ed. 6/-), Colebrooke's *Mountstuart Elphinstone* (2 Vols., Murray, 1884, 25/-), Trotter's *John Nicholson* (1897, Murray, 2/6) and *Bagard of India* (Outram) (Blackwood 5/-). Among noteworthy works treating of recent history since 1858 are Lovat Fraser's *India under Lord Curzon and After* (Heinemann, 1911, 16/-), Lady Betty Balfour's *Lord Lytton's Indian Administration* (Longmans, 1899, 18/-), Sir W. Hunter's *Bombay, 1858-1900*, a Study of Indian Administration (Clarendon Press, 1892, 16/-), Col. Hanna's *Second Afghan War* (3 Vols., Constable, 1899-1907, 36/-), *Official History of the Second Afghan War* (Murray, 1905, 21/-). Sir John Adey *Indian Frontier Policy*, a historical sketch (Macmillan 1897, 6/-), Trotter's *India under Victoria* (2 Vols., W. H. Allen, 1886, 30/-).

For the Indian Mutiny the standard history is Kaye and Malletson's *History of the Indian Mutiny* (new ed. 6 vols. Longmans, 21/-). Sir George Forrest's *History of the Mutiny* (4 vols., 1904-1914, Blackwood, 64/-) gives the chief records in the Indian archives. The best one-volume narratives are Malletson's shorter work, *Indian Mutiny* (In Messrs. Seeley's "Events of Our Own Times" series 5/-) and T. Rice Holmes' *History of The Indian Mutiny* (1883, W. H. Allen, new ed. Macmillan, 15/-s.).

Constitution and Administration.—The changes lately effected in the constitution of the Indian Government have been embodied in the Report on Indian Constitutional Reforms, drawn up by the Secretary of State and the Viceroy (the Montagu-Chelmsford Scheme) and published in a handy octavo (Government Press, Calcutta, July, 1918, one rupee). The most comprehensive book on the new constitution is *Dyarchy* by Lionel Curtis (Clarendon Press, 1921: 31-6) which contain all the documents etc., relating to the reform scheme. At the head of books on the Indian Constitution, stands Sir Courtenay Ilbert's "*The Government of India* being a Digest of the Statute Law relating thereto with historical introduction and explanatory matter" (Clarendon Press, 1st ed., 1898 2nd ed., 1907, 3rd ed., 1915, 14/-1922, 10s 6d) the first edition contains important constitutional documents such as minutes, despatches, charters, etc., covering 130 pp. which have been omitted in the subsequent issues. The Digest drawn up by Sir C. Ilbert many years ago has been now embodied in the main in the "Government of India Act of 1915" which contains the entire body of law relating to the Government of India and which has been officially issued in octavo form (price 7d. Eyre and Spottiswoode). A supple-

ment to Ilbert's third edition gives a comparison between the Digest given in the book and this Act (1916, 1/-). The constitutional documents from the Regulating Act of 1773 down to the Consolidating Act of 1915 have been printed in handy form in P. Mukerji's *Indian Constitutional Documents* (1915, Calcutta, Thacker, Spink, Rs. 6/-); of the second ed. Vol. II, Rs. 3 has been issued in 1918 containing an historical introduction divided into two parts dealing with English political institutions and the present working constitution of India. The important constitutional documents have been also included in A. R. Iyengar's *Indian Constitution* (1909, 2nd enlarged ed. 1913, Loganatham, Madras, Rs. 3) which contains an historical view of the various administrative institutions. The documentary matter extends to nearly 250 pp. Chesney's *Indian Polity* (3rd ed. 1894, Longmans) gives an excellent historical view of the system of administration as it grew up from the early days of the English in India down to the end of the nineteenth century. Another useful work is B. K. Thakore's *Indian Administration to the dawn of responsible Government, 1765-1920* (Taraporewala, Bombay, Rs. 4). Sir William Lee Warner's *The Citizen of India* (1897, Macmillan 2/6) gives in brief outline a very good sketch of Indian administration. A more up-to-date work is G. Anderson's *British Administration in India* (Macmillan). H. A. D. Phillips' *Our Administration of India* (1888, W. Thacker, London, 6/-) gives an account of the Revenue and Collectorate Administration in all departments, and though this is done with special reference to Bengal, it is more widely useful. A. Mackenzie's *How India is Governed* (1882, Kegan Paul, 2/-) is a very brief sketch of the Indian constitution and administration and of England's work in India. For the system of judicial administration Herbert Cowell's *History and Constitution of the Courts and Legislative Authorities in India* (1872, 2nd ed., 1884, Thacker Spink, Calcutta, Rs. 6/-) is still useful, for the historical part.

Economics, Famines, etc.—Raden Powell's *Land Revenue and Tenure in British India* (2nd ed., 1907, revised by Sir T. Holderness, with an appendix added in 1912, 5/-, Clarendon Press) gives an account of land revenue system in India. Sir W. Hunter's *Annals of Rural Bengal* (1898, new ed., 1897, Smith Elder, 16/-) and his *Orissa* (2 vols., 1872, Smith Elder, 32/-) give a good idea of the economic condition of eastern India when it passed under British rule. J. C. Jack's *The Economic Life of a Bengal District* (1916, Clarendon Press, 7/6) is an economic study of the people's life based on the minute data collected from innumerable families for the record of rights of Bengal and is of great value in estimating the resources of the people and the economic results of British rule. Dr. H. Mann's *Land and Labour in a Deccan Village* (Oxford University Press, 2 vols., Rs. 6/-) and Dr. Slater's *Some South Indian villages* (Oxford University Press, Rs. 5/-) deal with agricultural economics. Sir Theodore Morison's *Industrial Organisation of an Indian Province* (1906, Murray, 10/6) reviews the principal economic facts and shows their relation to the abstract science of economics. The author treats specially of the United Provinces to which his personal observation was mainly

confined. Morison's *Economic Transition in India* (1911, Murray) deals with the development of industrial and economic resources of the country. Romesh Dutt's *Economic History of India under Early British Rule* (1902, Kegan Paul, 16/-) and the same in the *Victorian Age* (1904, Kegan Paul, 1904) are a powerful though one-sided indictment of British economic and land revenue policy. Valuable books on the co-operative system are R. B. Ewbank's *Indian Co-operative Studies* (Oxford University Press.) and C. F. S. Strickland's *Introduction to Co-operation in India* (Oxford University Press.) Rs. 2. Dutt, who is a staunch champion of the Permanent System of land tenure in vogue in Bengal and of its introduction into other parts of India, in his *Famines and Land Assessments in India* (1899, Kegan Paul, 7/6) on the same lines asserts that famines are due to the land policy of the Government. On Famines the best books are the Reports of the Famine Commissions pub. 1885, 1887, 1898 (Eyre and Spottiswoode). A good narrative of the last great famine of 1899-1900 is to be found in Vaughan Nash's *The Great Famine, its causes* (1900, Longmans, 6/-). On the earlier great Bengal Famine, Sir Bartle Frere's *The Impending Bengal Famine*, and how to prevent future famines in India, (1874, Murray, 5/-) is useful and suggestive. Charles Blair's *Indian Famines* in their historical and financial aspects (1874, Blackwood 5/-) contains good remarks on preventive and mitigating measures. Loveday's *History and Economics of Indian Famines* (2s. 6d.) is a later book of the same kind. For public works, Railways, etc., Thornton's *Indian Public Works* (1875, Kegan Paul, 5/-) MacGeorge's *Ways and Works in India* (1893, Constable, 14/-), Horace Bell's *Railway Policy in India* (1891, 12/-), Deakin's *Irrigated India* (1893, Spon, 8/6), Buckley's *Irrigation Works of India* (1905 Spon, 42/-) *Irrigation in India*, By D. G. Morris. (Oxford University Press.) Rs. 2. Valentine Ball's *Coal Fields of India* (new edition, 1914, Calcutta), Report of the *Irrigation Commission* (1905, Eyre and Spottiswoode).

On Finance the work of the Strachey Brothers, Sir John and Sir Richard, *Finances and Public Works of India* (1882, Kegan Paul, 10/6) is valuable as describing the system of Indian Finance by persons who had intimate knowledge and personal experience. Reports of the Indian Currency Committee, 1898 and 1899, and of the Royal Commission on the administration of the expenditure of India, 1900, contain a vast mass of useful material. *Indian Currency* (1873, Longmans 2/-), by Dunning Macleod, treats of the means of introducing a Gold Currency in India, and of extending Banking and Paper Currency. H. J. Tozer's *British India and its Trade* (1902) gives a good view of the trade and surveys its growth during the latter half of the nineteenth century. A more recent work is Prof. K. T. Shah's *Trade, Tariffs and Transport in India* (National Book Depot, Bombay: 1923.) Rs. 10. Prof. Lees Smith's *Studies in Indian Economics* (1909, Constable, 3/6) and Jadunath Sarkar's *Economics of British India* (4th ed., 1917, Sarkar and Sons, Calcutta) are good introductions to the subject. The former is a series of lectures delivered by the author for the Bombay

Government. The Exchange question is briefly explained in F. V. Rushforth's *The Indian Exchange Problem* (Oxford University Press 1921. Re.1-6).

The Protected States.—Malleeson's *Native States of India* (1875, W. H. Allen, 18/-), gives an historical sketch of the various states. The author was then connected with the state of Mysore as the guardian of its young ruler. The work of another official who was connected with Mysore as its Resident at the end of his Indian career, Sir W. Lee-Warner, *The Native States of India* (2nd ed., 1910, Macmillan, 12s. 6d. 1st ed., 1894, under title "Protected Princes of India") whilst giving what he calls an "Account of India under Home Rule", chiefly discusses the question of the position of these states in relation to the British Government. A Punjab official, Sir Charles Tupper, in his *Our Indian Protectorate* (1893, Longmans, 1/-) similarly treats of the relations between the British Government and its Feudatories, but goes more into the past and has instructive chapters on indigenous home rule under the Mahrattas, the Sikhs, the Mahomedans, etc. This valuable work is now thoroughly out of print, but a good vernacular translation in Gujarati by A. N. Buch (1900 Rajkot) is available. Sir Lepel Griffin's *Punjab Chiefs* (1865 Trubner) and

Basis of the Punjab (1870, 2nd ed. 1873, Trubner, 20/-) give in considerable detail the history of the principal Punjab states like Patiala, Kapurthala, Nabha, etc. Massy prepared a new edition of the former book (1889, Allahabad, Pioneer Press) and completed it by another *Chiefs and Families of Note in the Punjab* (1890, Allahabad, Pioneer Press) and they give short notices of all the ruling chiefs of the Punjab. Aberigh Mackay who was tutor to the Raja of Ratlam in Central India and Principal of Rajkumar College at Indore, wrote on the *Chiefs of Central India* (1879) and on the *Native Chiefs and their States in 1877* (1878). Both books are noteworthy. Aitchison's *Treaties, Engagements and Sanads* relating to India and the neighbouring countries (3rd ed., 1893, 11 volumes, Calcutta, Government Press, Rs. 34) is the standard collection of all the treaties with the Native Feudatory States. The relations with the Nizam are investigated in H. G. Briggs's *The Nizam* (2 vols., 1861, Quaritch, 28/-) and Hastings Fraser's *Our Faithful Ally, the Nizam* (1865, Smith Elder 18/-). The relations with the Gaekwar of Baroda are exhaustively treated in *The Gaekwar and his Relations with the British Government* (1863, Education Press, Bombay) by Col. R. Wallace who was Resident at Baroda.

Rs. 30,000, Rs. 27; and for every add. Rs. 10,000, or part thereof, in excess of Rs. 30,000, Rs. 9.		Copy or Extract— If the original was not chargeable with duty, or if duty with which it was chargeable does not exceed 1 Rupee.. .. 1 0
Where payable at more than one year after date or sight, same duty as a Bond.		In any other case 2 0
Bill of Lading 0 8		Counterpart or Duplicate— If the duty with which the original instrument is chargeable does not exceed one rupee —The same duty as is payable on the original. In any other case .. 2 0
Bond (not otherwise provided for)—		Delivery Order 0 1
Not exc. Rs. 10 0 2		Entry in any High Court of an Advocate or Vakil 500 0
Exc. Rs. 10, but not exc. Rs. 50 .. 0 4		In the case of an Attorney .. 500 0
Exc. Rs. 50, but not exc. Rs. 100 .. 0 8		Instrument—Apprenticeship .. 10 0
Exc. Rs. 100 & does not exc. Rs. 200 1 0		Divorce 2 0
Exc. Rs. 200 & does not exc. Rs. 300 2 4		Other than Will, recording an adoption or conferring or purporting to confer Authority to adopt 20 0
		Lease— Where rent is fixed and no premium is paid, for less than 1 year, same duty as Bond for whole amount; not more than 3 years, same as Bond for average annual rent reserved; over 3 years, same as Conveyance for consideration equal to amount or value of the average annual rent reserved; for indefinite term, same as Conveyance for a consideration equal to the amount or value of the average annual rent which would be paid or delivered for the first ten years if the lease continued so long; in perpetuity, same as Conveyance for consideration equal to one-fifth of rents paid in respect of first 50 years. Where there is premium and no rent, same as Conveyance for amount of premium; premium with

	Rs. a.		Rs. a.
rent, same as Conveyance or amount of premium in addition to the duty which would have been payable on the lease if no fine or premium or advance had been paid or delivered.		For every sum insured exceeding Rs. 250 but not exceeding Rs. 500	0 4
<i>Letter</i> —Allotment of Shares	0 2	For every sum of Rs. 1,000 in excess of Rs. 500	0 6
Credit	0 2	If drawn in duplicate, for each part—	
License	10 0	Half the above rates.	
<i>Memo. of Association of Company</i> —If accompanied by Articles of Association	30 0	In case of a re-insurance by one Company with another— $\frac{1}{4}$ of duty payable in respect of the original insurance, but not less than 1 anna, or more than 1 R.	
If not so accompanied	80 0	Policies of all classes of Insurance not included in Article 47 of Schedule 1 of Stamp Act of 1899 covering goods Merchandise personal effects, crops and other property against loss or damage, are liable to the same duty as Policies of Fire Insurance.	
<i>Notarial Act</i>	2 0	<i>Power of Attorney</i> —	
<i>Note or Memo.</i> intimating the purchase or sale—		For the sole purpose of procuring the registration of one or more documents in relation to a single transaction or for admitting execution of one or more such documents	1 0
(a) Of any Goods exceeding in value Rs. 20	0 4	When required in suits or proceedings under the Presidency Small Causes Courts Act, 1882	1 0
(b) Of any Stock or marketable Security exceeding in value Rs. 20—Subject to a maximum of Rs. 20, a. 2 for every Rs. 10,000, or part.		Authorising 1 person or more to act in a single transaction other than that mentioned above	2 0
<i>Note of Protest</i> by a Ship's Master	1 0	Authorising not more than 5 persons to act jointly and severally in more than 1 transaction, or generally	10 0
<i>Partnership</i> —Where the capital does not exceed Rs. 500	5 0	Authorising more than 5 but not more than 10 persons to act	20 0
In any other case	20 0	When given for consideration and authorising the Attorney to sell any immovable property—The same duty as a Conveyance for the amount of the consideration.	
Dissolution of	10 0	In any other case, for each person authorised	2 0
<i>Policy of Insurance</i> —		<i>Promissory Notes</i> —	
(1) <i>Sea</i> —Where premium does not exceed rate of 2a., or $\frac{1}{4}$ per cent. of amount insured	0 1	(a) When payable on demand—	
In any other case for Rs. 1,500 or part thereof	0 1	(i) When the amount or value does not exceed Rs. 250	0
(2) <i>For time</i> —For every Rs. 1,000 or part insured, not exc. 6 months	0 2	(ii) When the amount or value exceeds Rs. 250 but does not exceed Rs. 1,000	0 2
Exceeding 6 and not exceeding 12 months	0 4	(iii) In any other case	0 4
If drawn in duplicate, for each part:—Half the above rates, for Sea and Time.		(b) When payable otherwise than on demand—The same duty as a Bill of exchange for the same amount payable otherwise than on demand.	
(3) <i>Fire</i> —When the sum insured does not exceed Rs. 5,000	0 8	<i>Protest of Bill or Note</i>	2 0
In any other case	1 0	<i>Protest by the Master of a Ship</i>	2 0
In respect of each receipt for any payment of a premium on any renewal of an original policy—One half of the duty payable in respect of the original policy in addition to the amount, if any, chargeable under Art. 53 (<i>Receipt</i>).		<i>Proxy</i>	0 2
(4) <i>Accident and Sickness</i> —Against Railway accident, valid for a single journey only	0 1	<i>Receipt for value exc. Rs. 20</i>	0 1
In any other case—for the maximum amount which may become payable in the case of any single accident or sickness where such amount does not exceed Rs. 1,000, and also where amount exc. Rs. 1,000, for every Rs. 1,000 or part	0 2	<i>Reconveyance of mortgaged property</i> —	
(5) <i>Life, or other Insurance, not specially provided for</i> —		(a) If the consideration for which the property was mortgaged does not exceed Rs. 1,000—the same duty as a bond for the amount of such consideration as set forth in the Reconveyance.	
For every sum insured not exceeding Rs. 250	0 2	(b) In any other case	10 0

Rs. s.	Ra. s.
Release —that is to say, any instrument whereby a person renounces a claim upon another person or against any specified property—	
(a) If the amount or value of the claim does not exceed Rs. 1,000—the same duty as a Bond for such amount or value as set forth in the Release.	
(b) In any other case	10 0
Respondentia Bond —The same duty as a Bond for the amount of the loan secured.	
Security Bond —(a) when the amount secured does not exceed Rs. 1,000—the same duty as a Bond for the amount secured.	
(b) In any other case	10 0
Settlement —The same duty as a Bond for the sum equal to the amount or value of the property—settled as set forth in such settlement.	
Revocation of Settlement —The same duty as a Bond for a sum equal to the amount or value of the property concerned as set forth in the instrument of revocation but not exceeding ten rupees.	
Share-warrant to bearer issued under the Indian Companies Act.—One and a half times the duty payable on a conveyance for a consideration equal to the nominal amount of the shares specified in the warrant.	
Shipping Order	0 1
Surrender of Lease —When duty with which lease is chargeable does not exceed Rs. 5.—The duty with which such Lease is chargeable.	
In any other case	5 0
Transfer of Shares —One-half of the duty payable on a Conveyance for a consideration equal to the value of the share.	
Transfer of any Interest secured by a Bond, Mortgage-deed, or Policy of Insurance—If duty on such does not exceed Rs. 5.—The duty with which such Bond, &c., is chargeable.	
In any other case	10 0
—Of any property under the Administrator General's Act 1874, Section 31..	10 0
—of any trust property without consideration from one trustee to another trustee or from a trustee to a beneficiary—five rupees or such smaller amount as may be chargeable for transfer of shares.	
Transfer of Lease by way of assignment and not by way of under-lease—The same duty as a conveyance for a consideration equal to the amount of the consideration for the transfer.	
Trust, Declaration of —Same duty as a Bond for a sum equal to the amount or value of the property concerned, but not exceeding	15 0
Revocation of —Ditto, but not exceeding	10 0
Warrant for Goods	0 8

WIRELESS TELEGRAPHY.

At the commencement of the year there were six coast stations for communication with ships and twelve inland stations together with three stations in the Bay of Bengal, maintained by the Department of Posts and Telegraphs. In the latter part of 1921 and beginning of 1922 the question of bringing the inland stations up to date was re-considered. These stations were built some years ago and are entirely unsuitable to modern telegraphic requirements. It was, therefore, decided that they should be modernised so as to form a high-speed network to supplement the existing land lines. This was termed the "Inland" system. It was further decided that local governments should be permitted to erect groups of small stations to feed and distribute from the Inland system. These are called "Feeder" stations. In addition it was decided to allow private individuals to erect and work sets for business or private purposes under licence. Owing to the necessity for curtailing all unproductive expenditure, the end of 1922 saw the definite postponement of the development of the Inland scheme and consequently it is unlikely that any Feeder stations will be erected in the near future.

Progress Delayed :—The Department of Posts and Telegraphs now keeps only the Coast stations fully open. The In and stations have been placed on a basis which enables their valuable plant to be kept in working order but they perform no services. This together with the closing and dismantling of two or three

small or entirely unproductive stations will result in considerable saving, a portion of which it is proposed to use annually to bring the stations up to date. Therefore no improvement in the general radio service will be apparent for some time. In the meanwhile the high-speed service between Rangoon and Madras is nearing completion which should considerably improve the telegraph facilities between these places and prove remunerative. The improvement of existing stations referred to consists in putting in modern radio plant and providing that the stations are operated from the local telegraph offices. If a pair of stations can be so treated each year the main links of the Inland service should be complete in about five years.

Long Distance :—A great deal of valuable experimental work has been carried out and considerable improvement in working, especially as regards long distance reception and the reduction of atmospheric effects has resulted. An experimental service from England was given a good trial during the year and this has now developed into a regular service for a short period each day at 75% of the existing cable rates. From this we should obtain experience which will be most valuable when the Imperial station is being designed.

Very little progress has been made as regards the Indian station for the Imperial scheme, but signs are not wanting that a long delayed decision will shortly be arrived at. The position of India in respect to other radio stations in

the world demands the most efficient station if all the traffic which will be on offer is to be accepted and dealt with on a commercial basis.

Broadcasting :—Proposals to permit Broadcasting by private enterprise have been worked out and are now only awaiting the settlement of some minor details before being formally presented to Government. There is no question that India will offer very great possibilities to a properly organised broadcasting service not only for entertainment and educational purposes but also for business purposes, *i.e.*, broadcasting quotations, business news, etc.

It was intended to proceed with the erection of a Government radio school at Karachi to take the place of the existing temporary and inadequate establishment and to include therein suitable workshops and an experimental establishment. This has been postponed in view of the financial situation and the instruction of Government and private students must perforce be continued in the temporary premises. During the year the school has been fairly well occupied with training students for the Department, Army and also a few from Indian States.

The question of the organisation of State-owned radio sets in the States in India has been considered and will probably be settled this year. In the meanwhile some of the States are purchasing small sets, mostly for telephony.

Private Agency :—A large number of licenses have been granted to private persons in British India for the erection of sets and this form of radio work should steadily develop more especially as the manufacture and scale of apparatus in India by private enterprise is in contemplation. There is no doubt that the

majority of parts for small radio sets could be more cheaply manufactured in this country than they can be imported and further such an industry would find the right kind of skilled labour already in India.

Prospects :—Finally, the development of radio by Government has been almost entirely restricted for the reasons given above, but the development by private enterprise has been encouraged and it is to this source that India must look in the immediate future for internal radio communication. There are three most promising lines of development, *viz.* :—

(a) Erection of small sets either for speech or morse in districts where no land lines exist, and to link such districts with the existing landlines. In this connection it may be remarked that modern small radio sets are capable of using either morse or speech at will and if used for speech can be operated by the ordinary desk telephone instrument in daily use all over India.

(b) Broadcasting.

(c) The use of radio as a substitute for landline to form the trunk telephone route between two cities which already have telephone facilities.

All of these will open up a new industry which if properly fostered would very soon extend its sales outside the limits of India.

In the meanwhile a great deal of work has been done both as regards legislature and general organisation to clear the ground, with the result that Government is in the position to exercise the completest control over radio development while at the same time being able, because of its powers, to foster private enterprise to the fullest possible extent.

Who's Who in India.

- ABBOTT, EVELYN ROBINS, C.I.E.** (1921). I.C.S. Punjab Commn. *b.* 9 May 1873. *Educ.*: Bath Coll. and Balliol Coll. *m.* Lillian, *d.* of Sir W. O. Clark, Kt. (I.C.S. ret'd.), Acting Financial Commissioner (Development), Punjab. *Address*: Lahore or Simla.

- YAIN, LEE AH, K.-I-H. (Gold), Bar-at-Law, M. L.C. Councillor, Rangoon Corporation; Fellow of Rangoon University; *b.* April 1874, *Educ.*: Rangoon College and Cambridge. *Address:* 67, Merchant Street, Rangoon.
- YULE, SIR DAVID, Bart. (1922), Managing Director, Messrs. Andrew Yule & Co., Ltd. *b.* 4 Aug. 1858. *m.* Annie Henrietta Yule, *d.* of late Andrew Yule. *Educ.*: R. High School, Edinburgh. Joined firm of Andrew Yule & Co., Calcutta, 1875; Director of London Joint City and Midland Bank, Ltd., Mercantile Bank of India, Ltd., Royal Exchange Assurance Corporation, Magadi Soda Co. Ltd., Chairman of Alliance Bank of Simla, Ltd. *Address:* 8, Clive Row, Calcutta.

Assam.

The Province of Assam, 61,471 square miles in area, includes the Assam Valley Division, the Surma Valley and Hill Division and the State of Manipur. It owes its importance to its situation on the north-east frontier of India. It is surrounded by mountainous ranges on three sides while on the fourth (the west) lies the Province of Bengal on to the plains of which debouch the two valleys of the Brahmaputra and the Surma which form the plains of Assam. These two valleys are separated from each other by the Assam Range, which projects westward from the hills on the eastern border.

Population.

The total population of the Province in 1921 was 7,990,246, of whom only 384,016 were in Manipur. Of the population in 1921, 2½ millions were Mahomedans, 4½ millions Hindus and 1½ millions Animists, 44 per cent. of the population speak Bengali, 22 per cent. speak Assamese; other languages spoken in the province are Hindi, Uriya and a great variety of languages classified under the general heading of the Tibeto-Chinese languages. Owing to the great areas of waste and rivers the density of the province is only 130, which compared with that of most other parts of India is low, but is more than double that of Burma.

Agricultural Products.

It has agricultural advantages for which it would be difficult to find a parallel in any part of India, climate, soil, rainfall and river systems all being alike favourable to cultivation. Rice is the staple food crop, nearly 5 million acres being devoted to this crop. Except in the Himalayan Terai irrigation is unnecessary. Jute and tea are the most important crops grown for export. Wheat and tobacco are also grown and about 66 square miles are devoted to sugarcane. The total area of 'reserved' forest is about 5,601 square miles and the unclassified state forests cover about 15,630 square miles.

Meteorological Conditions.

Rainfall is everywhere abundant, and ranges from 67 to 229 inches. The maximum is reached at Cherrapunji in the Khasi Hills, which is one of the wettest places in the world, having a rainfall of 458 inches. The temperature ranges from 59 at Sibsaagar in January to 84½ in July. Earthquakes of considerable severity have taken place, by far the worst being that which occurred in 1897.

Land Tenures.

Most of the actual cultivators of the soil hold direct from the State. A large part of Goalpara and of the more densely populated portions of Sylhet was however included in the permanent settlement of Bengal; and the system of land tenure in Cachar, and the existence of large estates on privileged rates of revenue in Kamrup have tended to produce a large tenant class in those districts also. At the 1901 census the tenant class amounted to more than one-third of the total number of persons supported by

agriculture. In the 1911 census a very marked increase in tenancy throughout the Province was shown.

Mines and Minerals.

The only minerals in Assam worked on a commercial scale are coal, limestone and petroleum oil. The most extensive coal measures are in the Naga Hills and the Lakhimpur district, where about 350,000 tons are raised annually. Limestone is quarried in the Khasi and Jaintia Hills, in Sylhet, and in the Garo hills. Petroleum is worked only in Lakhimpur and Cachar.

An account of the petroleum occurrences in Assam was recently published in the memoirs of the Geological Survey of India. It states that the petroleum localities in this province are confined to a curved belt of country along the basins of the Brahmaputra and Surma. This belt is traceable over a distance of some 800 miles from N. E. Assam through Cachar and Chittagong to the Arakan coast, where it has a S.S.E. trend. It is roughly concentric with the trend of the Burmese oil belt, the distance between the two varying from 70 to 150 miles.

Manufactures and Trade.

Silk is manufactured in the Assam Valley, the weaving being done by the women. Cotton weaving is also largely practised by the women, and almost every house contains a loom; the cloth is being gradually displaced by imported goods of finer texture and colour. Boat building, brass and metal and earthenwares, tea manufacture and limestone burning are the other industries apart from agriculture, which itself employs about 89 per cent. of the population. Assam carries on a considerable trade with the adjoining foreign tribes and countries.

Communications.

The trade of Assam is chiefly carried by river, but increasing use is being made of the Assam Bengal Railway which runs from the port of Chittagong to Silchar at the eastern end of the Surma Valley. A branch of that line runs along the south of the Assam Valley from Gauhati to Tinsukia, a station on the Dibru Sadiya Railway, and is connected with the Surma Valley branch by a line that pierces the North Cachar Hills, the points of junction bring Luming in the northern and Badarpur in the southern valley. The Eastern Bengal Railway connects Assam with the Bengal system via the valley of the Brahmaputra. The excellence of its water communication makes Assam less dependent upon roads than other parts of India; but in recent years the road system has been developed and there is an unmetalled trunk road through the whole length of the Brahmaputra Valley and an excellent road from Gauhati to Shillong. A large fleet of steamers maintained by the India General Steam Navigation Company and the Rivers Steam Navigation Company plies on the rivers of both valleys. An alternate day service of passenger boats runs between Goalundo and Dibrugarh.

THE FINANCES OF ASSAM.

In common with the other Provinces of India, Assam secured substantial financial autonomy under the Reform Act of 1919. The present financial position is set out in some detail in the following table:—

Estimated Revenue in 1928-29

(In Thousands of Rupees.)

Taxes on Income	50
Land Revenue	98,02
Excise	60,00
Stamps	10,95
Forest	16,25
Registration	1,67
TOTAL ..	1,96,80
Administration of Justice	1,54
Jails and Convict Settlements	1,32
Police	1,45

Education (other than European)	23,05
Medical	10,02
Public Health	5,30
Agriculture	4,80
Industries	99
Miscellaneous Departments	5
TOTAL									45,05

Administration.

The province of Assam was originally formed in 1874 in order to relieve the Lieutenant-Governor of Bengal of part of the administration of the huge territory then under him. In 1903, as the result of further deliberations, it was decided to add to the small Province of Assam the eastern portion of its unwieldy neighbour and to consolidate those territories under a Lieutenant-Governor. The Province of Eastern Bengal and Assam as then constituted was again broken up on the 1st of April, 1912: the Eastern Bengal Districts were united with the Bengal Commissionerships of Burdwan and the Presidency to form the Presidency of Bengal under a Governor-in-Council, Bihar, Chota Nagpur and Orissa were formed into a separate province, while the old Province of Assam was re-constituted under a Chief Commissioner.

Under the Indian Reforms Act of 1919 the Province was raised in status to that of administration by a Governor-in-Council and was thereby ranked, with certain minor provisions to suit its undeveloped character with the older

major provinces of India. The exact nature of this change in its constitution, with the powers of the Governor, the Council, the Ministers and the Legislative Council is indicated in the general section. The Provincial Governments (*q.v.*) There is also set out the financial arrangement between the Government and the Provinces. The new constitution came into force in January 1923.

The capital is Shillong, a town laid out with great taste and judgment among the pine woods on the slopes of the Shillong Range which rises to a height of 6,450 feet above the sea. It was destroyed in the earthquake of 1897 and has been rebuilt in a way more likely to withstand the shocks of earthquake.

GOVERNOR.

Sir John Kerr, K.C.S.I., K.C.I.E.

EXECUTIVE COUNCIL.

William James Reid, C.S.I.

Khan Bahadur Kutabuddin Ahmed.

MINISTER.

Rai Bahadur Pramod Chandra Datta, B.L.

Moulvie Salyad Muhammad Saadullah.

ASSAM REPRESENTATIVE TO THE COUNCIL OF STATE.

Elected.

The Hon'ble Srijiit Chandra Dhar Barua .. | Assam (Non-Muhammadian).

ASSAM REPRESENTATIVE TO THE LEGISLATIVE ASSEMBLY.

Elected.

Srijiit Tarun Ram Phukan ..	Assam Valley (Non-Muhammadian).
Mr. Kamini Kumar Chanda ..	Surma Valley cum Shillong (Non-Muhammadian).
Maulavi Ahmad Ali Khan ..	Assam (Muhammadian).
Mr. Eustace Joseph ..	Assam (European).

Baluchistan.

Baluchistan is an oblong stretch of country occupying the extreme western corner of the Indian Empire. It is divided into three main divisions: (1) British Baluchistan with an area of 9,476 square miles consisting of tracts assigned to the British Government by treaty in 1879; (2) Agency Territories with an area of 44,345 square miles composed of tracts which have, from time to time, been acquired by lease or otherwise brought under control and placed directly under British officers; and (3) the Native States of Kalat and Las Bela with an area of 78,434 square miles. The Province embraces an area of 134,638 square miles and according to the census of 1921 it contains 799,625 inhabitants.

The country, which is almost wholly mountainous, lies on a great belt of ranges connecting the Safed Koh with the hill system of Southern Persia. It thus forms a watershed the drainage of which enters the Indus on the east and the Arabian Sea on the south while on the north and west it makes its way to the inland lakes which form so large a feature of Central Asia. Rugged, barren, sun-burnt mountains, rent by high chasms and gorges, alternate with arid deserts and stony plains, the prevailing colour of which is a monotonous sight. But this is redeemed in places by level valleys of considerable size in which irrigation enables much cultivation to be carried on and rich crops of all kinds to be raised.

The political connection of the British Government with Baluchistan commenced from the outbreak of the First Afghan War in 1839; it was traversed by the Army of the Indus and was afterwards occupied until 1842 to protect the British lines of communication. The districts of Kachi, Quetta and Mastung were handed over to the Amir of Afghanistan and Political Officers were appointed to administer the country. At the close of the First Afghan War, the British withdrew and these districts were assigned to the Khan of Kalat. The founder of the Baluchistan Province as it now exists was Sir Robert Sandeman who broke down the close border system and welded the Baluch and Brahui Chiefs into a close confederacy. In the Afghan War of 1879 Pishin, Shorapur, Sibi, Zawara Valley and Thal-Chotiali were handed over by Yakub Khan to the British Government and retained at Sir Robert Sandeman's strenuous insistence.

Industries.

Baluchistan lies outside the monsoon area and its rainfall is exceedingly irregular and scanty. Shahrig which has the heaviest rainfall, records no more than 11½ inches in a year. In the highlands few places receive more than 10 inches and in the plains the average rainfall is about 5 inches, decreasing in some cases to 3. The majority of the indigenous population are dependent for their livelihood on agriculture, provision and care of animals and transport. The majority of the Afghan and the Baluch, as a rule, cultivate their own lands. The Brahuis dislike agriculture and prefer a pastoral life. Previous to the advent of the

British life and property were so insecure that the cultivator was fortunate if he reaped his harvest. The establishment of peace and security has been accompanied by a marked extension of agriculture which accounts for the increase in the numbers of the purely cultivating classes. The Mekran Coast is famous for the quantity and quality of its fish and the industry is constantly developing. Fruit is extensively grown in the highlands and the export is increasing.

Education is imparted in 82 public schools of all kinds, with 4,149 scholars. There is a distinct desire for education amongst the more enlightened headmen round about Quetta-Pishin and other centres where the Local Government with its officers stays at certain seasons, such as Sibi and Ziarat; but on the whole education or the desire of it has made little or no advance in the outlying districts. The mineral wealth of the Province is believed to be considerable, but cannot be exploited until railways are developed. Coal is mined at Khosat on the Sind-Pishin railway and in the Bolan Pass. The output of coal in 1921 was 5,151 tons and of coal dust 37,004 tons. Chromite is extracted in the Zhob District near Hindu-bagh. Owing to an increased demand for chromite ore in Europe the output in recent years has increased, being 502,435 tons in 1921. Lime-stone is quarried in small quantities.

Administration.

The head of the local administration is the officer styled Agent to the Governor-General and Chief Commissioner. Next in rank comes the Revenue Commissioner who advises the Agent to the Governor-General in financial matters and generally controls the revenue administration and exercises the functions of a High Court as Judicial Commissioner of the Province. The keynote of administration in Baluchistan is self-government by the tribesmen, as far as may be, by means of their Jirgas or Councils of Elders along the ancient customary lines of tribal law, the essence of which is the satisfaction of the aggrieved and the settlement of the feud, not retaliation on the aggressor or the vindictive punishment of a crime. The district levies which normally numbered 2,300 odd play an unobtrusive but invaluable part in the work of the Civil administration not only in watch and ward and the investigation of crime, but also in the carrying of the mails, the serving of processes and other miscellaneous work. In addition to these district levies there are ordinarily two irregular Corps in the Province; the Zhob Levy Corps and the Mekran Levy Corps. Their combined strength in the latest returns was 953 cavalry and 892 infantry. The Province does not pay for itself and receives large subsidies from the Imperial Government.

Agent to the Governor-General and Chief Commissioner. The Hon'ble Mr. F. W. Johnston, C.S.I., C.I.E., I.C.S.

Revenue and Judicial Commissioner, Lt.-Col. A. D. G. Ramsay, C.I.E., O.B.E.

Secretary, Public Works Department, Col. L. H. Closs, C.M.G.

Secretary to the Agent to the Governor-General and Chief Commissioner, Major H. V. Biscoe, I.A.

Political Agent, Zhob, Lt.-Col. R. H. C. Trench.

Political Agent, Kalat and Bolan Pass, Lt.-Col. T. H. Keyes, C.M.G., C.I.E., I.A.

Political Agent and Deputy Commissioner, Quetta, Lt.-Col. F. McConaghey, C.I.E.

Assistant Political Agent and Assistant Commissioner, Quetta, E. W. Hollands.

Political Agent, Chagai, Khan Bahadur Sharbat Khan, C.I.E.

Political Agent, Sibi, Major G. F. W. Anson, O.B.E.

Assistant Political Agent, Sibi, Rai Sahib Hakim Rattan Chand

Political Agent, Loralai, Major C. T. Daukes.

Residency Surgeon and Chief Medical Officer, Lt.-Col. D. J. M. Deas, I.M.S.

Civil Surgeon, Sibi, Major J. Anderson.

Assistant Political Agent, Zhob, Khan Bahadur K. P. Kalkobad.

Assistant Political Agent, Kalat, (Vacant).

Civil Surgeon, Quetta, Major H. H. Thorburn, C.I.E., M.B., I.M.S.

ANDAMAN AND NICOBAR ISLANDS.

This is a group of islands in the Bay of Bengal of which the headquarters are at Port Blair, by sea 780 miles from Calcutta, 740 miles from Madras and 360 miles from Rangoon, with which ports there is regular communication.

The land area of the islands under the administration is 3,148 square miles, namely, 2,508 square miles in the Andamans and 635 square miles in the Nicobars. The total population is 26,459. The Islands are administered by the Chief Commissioner of the Andaman and Nicobar Islands who is also the Superintendent of the Penal Settlement. The penal settlement, which was established in 1858, is the most important in India.

Chief Commissioner of Port Blair, Lieut.-Col. M. L. Ferrar, C.I.E., O.B.E., I.A.

Commandant and District Superintendent of Police, Major E. J. E. Poole, M.C.

Senior Medical Officer and Civil Surgeon, Major F. A. Barker, I.M.S.

COORG.

Coorg is a small petty Province in Southern India, west of the State of Mysore. Its area is 1,582 square miles and its population 174,976. Coorg came under the direct protection of the British Government during the war with Sultan Tippu of Seringapatam. In May 1834, owing to misgovernment, it was annexed. The Province is directly under the Government of India and administered by the Chief Commissioner of Coorg who is the Resident in Mysore with his headquarters at Bangalore. In him are combined all the functions of a local government and a High Court. The Secretariat is at Bangalore where the Assistant Resident is styled Secretary to the Chief Commissioner of Coorg. In Coorg his chief authority is the Commissioner whose headquarters are at Mercara and whose duties extend to every branch of the administration. A Legislative Council consisting of 15 elected members and five nominated members was created in 1923. The chief wealth of the country is agriculture and especially the growth of coffee. Although owing to overproduction and insect pests coffee no longer commands the profits it once enjoyed, the Indian output still holds its own against the severe competition of Brazil. The bulk of the output is exported to France.

Resident and Chief Commissioner, Coorg, C. A. Souter, I.C.S.

AJMER-MERWARA.

Ajmer-Merwara is an isolated British Province in Rajputana. The Agent to the Governor General in Rajputana administers it as Chief Commissioner. The Province consists of two small separate districts, Ajmer and Merwara, with a total area of 2,711 square miles and a population of 501,395. At the close of the Pindari war Daulat Rao Scindia, by a treaty, dated June 25, 1818, ceded the district to the British. Fifty-five per cent. of the population are supported by agriculture, the industrial population being principally employed in the cotton and other industries. The principal crops are maize, millet, barley, cotton, oil-seeds and wheat.

Agent to the Governor-General in Rajputana and Chief Commissioner of Ajmer Merwara, The Hon. Mr. R. E. Holland, C.S.I., C.I.E. C.V.O.

The Central Legislature.

A Great Record of Three Years.

"To-day you have beginnings of Swaraj within my Empire; and widest scope and ample opportunity of progress to the liberty which my other Dominions enjoy."

With the King-Emperor's message containing this sentence H. R. H. the Duke of Connaught inaugurated the new bicameral Legislature of India called the Council of State and the Legislative Assembly, on the 9th February at Delhi.

For the first time, said Lord Chelmsford, the Viceroy of India, in requesting His Royal Highness to begin the auspicious function, the principle of autocracy which had not been all wholly discarded in all earlier reforms was definitely abandoned; the conception of British Government as a benevolent despotism was finally renounced; and in its place was substituted that of a guiding authority whose role it would be to assist the steps of India along the road that in the fulness of time would lead to complete self-government within the Empire.

"You have made the Indian Legislature the mirror of events in India. All matters of importance to India are reflected in your questions and resolutions. Those who were opposed to the true interests of India and were blind to her position in the British Empire, and to the mutual protection and strength those ties assured, had not been slow to allege in respect of the reform that they had neither substance nor permanency and that their supporters lived in a fool's paradise whose palaces and gardens would vanish in the twinkling of an eye like the passing of a mirage."—Lord Reading while proroguing the Legislature in September 1923.

Though it was born amidst strife and the contumely of its opponents, the Gandhi Party, the bicameral Legislature under the Government of India Act of 1919 began to function under the best of omens. Inaugurated by H. R. H. the Duke of Connaught in 1920, it worked for three years when the Legislative Assembly was dissolved after expiry of its legal term of existence and fresh elections ordered, while the Council of State (the Upper House) had still two years to run. The pages that follow give an account of the work done during the last three years by these bodies, special details being given of the work in 1923. As the Viceroy said in September 1923 in proroguing the Legislature it did a good deal of useful work, and loyally co-operated with the Government while enforcing its will where it thought necessary. As again the Viceroy himself said, it was unfortunate the last years of the Legislature were overclouded by the question of Indians overseas (the Kenya decision of the Imperial Cabinet, and the Reciprocity Bill). The certifications three in number no doubt show the Executive asserting itself against the Legislature, but they are largely explained by the transitional nature of the Constitution under the Government of India Act.

1921—Perfect Cordiality.

The keynote of amity and friendliness towards the Executive was struck for the whole year by the Legislative Assembly when it unanimously passed, omitting the portions bracketted, a resolution moved on the 15th February by Mr. Jinnah-Dwarkanadas recommending the Governor-General to declare the firm resolve of the Government of India to maintain the connection of India with the British Empire on the principle of perfect equality; to express regret that the martial law administration in the Punjab (1919) departed from this principle (and to mete out deterrent punishment to officers who had been guilty); and to satisfy himself that adequate compensation was awarded to the families of those killed or injured in the Jallianwalla Bagh.

Two committees, with non-official majorities, were appointed to examine press and "repressive" legislation. A committee to enquire into the causes of the non-co-operation movement and to suggest remedial measures was refused as likely to serve no useful purpose. Thus the Legislature practically supported the Executive in its attempt to maintain law and order. The policy was affirmed, as against a statement in the Escher Committee Report, that the Indian Army existed for the purposes of legitimate Indian defence and should be controlled by the Government of India and no one else. Towards the end of the session, Sir Sivaswami Iyer successfully moved fifteen resolutions arising out of the same Committee's report in regard to the administration and organisation of the Army in India on a national basis. Later on a Committee was appointed to consider the future military requirements of India. In addition to this, assurances were obtained as to the early constitution of a Military College and a Territorial Force for India, in which the educated classes should be admitted. By a resolution a Fiscal Commission was appointed to inquire into the possibilities of protecting Indian industries by tariff changes.

In proroguing the Legislature after the Delhi session, Lord Chelmsford, the retiring Viceroy, expressed his appreciation of its worth and its co-operation with the Government. "It is the first step," said His Excellency, "which counts, and this the first session should go far to dispel the doubts of those who have looked upon our new constitutional departure with gloomy forebodings. It should go far to hearten those who are pledged to fight the constitutional cause against the forces of disorder and anarchy."

The Second Session.

Lord Reading, the new Viceroy, opened the second session of the Central Legislature at Simla in September. His Excellency announced the impending visit of the Prince of Wales and hoped a right royal welcome would be extended to His Royal Highness. Referring to the resignation of Sir Thomas Holland, the Member for Industries, His Excellency remarked, that "he had to ask for it as the fundamental principles

of administration and justice had been violated," the charge laid at the door of the Member being that he had ordered the withdrawal of several prosecutions in what were known as "Munitions Fraud Cases" without consulting the Governor-General. The speech then dwelt at length on external affairs; the unsettled relations with Afghanistan; the operations in Waziristan; the Græco-Turkish hostilities, so distressing to Indian Muslims; the representation of India at the League of Nations and at the Imperial Conference. The terrible Moplah outbreak was next referred to, for which "the ground had been carefully prepared for the purpose of creating an atmosphere favourable to violence and no effort had been spared to rouse the passions and fury of the Moplahs." Alluding to non-co-operation and civil disobedience, His Excellency observed: "As head of the Government however I need not assure you that we shall not be deterred one hair's breadth from doing our duty." The speech concluded that the two questions of the moment, namely the well-being of the Indian Labour and the tension which unhappily existed between Englishmen and Indians would be considered.

At the Simla Session the Assembly, along with the Council of State, offered its welcome to the Prince of Wales and the new Viceroy, the Earl of Reading. A committee was appointed to suggest changes in the Criminal Procedure Code in order to do away with the distinctions in trials between Indians and non-Indians. A resolution was carried against the opposition of the Government for the appointment of a committee to prepare a scheme for the separation of judicial and executive functions. The most important resolution of the session was that which requested the Government of India to convey to the Secretary of State for India the view of the Assembly that the progress made by India on the path to responsible government warranted a re-examination and revision of the constitution at an earlier date than 1930.

Among other resolutions debated by the Legislature in the course of the session were the reconstitution of the provinces of India on a linguistic basis, the equalisation of the number of Indians and Europeans in certain posts, specially in the Secretariat, and recruitment for the All-India Services; all but the first were to appear in one form or another in the succeeding years. A number of resolutions based on the recommendations of the Geneva Labour Conference and relating to the welfare of workmen and labourers were carried. Nor did the hardy annual of a capital for India in a salubrious climate fail to be in the picture. Social reforms touching temperance and religious and moral education were not left out.

Resolutions dealing with the purchase of Government materials, the encouragement of sugar industry and the Railway Committee Report were also fully debated. The principle was asserted, and Government accepted, that Indians overseas should be treated as equal citizens with other races. The one important motion of adjournment concerned the Moplah rising, and the discussion largely favoured the pacificatory measures taken by the Government.

As regards legislation, six Bills were passed mostly of a financial nature.

At the beginning of the year, Standing Committees for Public Accounts and for Finance were appointed in the Assembly, the functions of which were extended to the sanction and control of expenditure for which the House voted "block grants," in addition to the duty of scrutinising the Budget proposals, examining supplementary votes and dealing with major schemes involving fresh expenditure.

In the Council of State, at the Delhi Session, Mr. Srinivasa Sastri moved a resolution regarding the use of fire arms for the purpose of suppressing disturbances. Mr. Lalubhai Samaldas demanded through a resolution that the Home Government be addressed with a view to fiscal autonomy for India "with due regard to their responsibilities under the Government of India Act." Improvement of the existing Government stocks, removal of the embargo on export of food grains, the tense exchange situation and an adequate share for India of the indemnities and reparations to be obtained from Germany formed other subjects of debate. A resolution demanding the release of the Punjab martial law prisoners was withdrawn. Another suggesting that full consideration be given to the public in India before any matters affecting the religious susceptibilities of Indians (the Khilafat question was in view) were decided, was carried. A promise was drawn out from Government that the question of Indians overseas would be considered in connection with the forthcoming amendment of the Emigration Act.

At the Simla Session Sir Maneckji Dadabhai withdrew his resolution that the Council of State be authorised to receive from the public petitions relating to public grievances and disabilities after an official assurance was given for the examination of the constitutional position. Syed Rizali's resolution recommending "the removal of centralisation in administration in India under which many classes of officials have great powers" was rejected. Standardisation of weights and measures throughout India was adopted. Overseas Indians including those in South Africa, and the retention of Aden under the Indian Government engaged attention.

Appalling Deficit.

The first Legislative Assembly was faced with the appalling deficit of Rs. 18½ crores in the Budget, necessitating the imposition of increased taxation, a task which was as hateful as it was burdensome, but realising its new responsibilities it hastened to help the Executive. The new taxes included enhanced custom duties surcharge on railway rates, increased income-tax and higher passenger rates, and they were expected to yield a small surplus of 84 lakhs. The non-officials continued the tradition of the old Imperial Legislative Council in attacking the immense growth of military expenditure and they continuously impressed upon the Government the need of reduced cost of administration. The request of the Assembly that there should be no differentiation between the votable and non-votable items in the budget

was granted by the Viceroy, who ignored that specific distinction of the Constitution as a generous gesture and as a recognition of the very high sense of responsibility the legislators showed in their very first session.

There could in these circumstances be no hope of the provincial contribution being reduced or abolished as the Central Government was utterly unable to balance its own budget. All requests in this direction were therefore turned down.

It is worth noting here that the Council made fifteen amendments to the Finance Bill as passed by the Assembly and thus gained a right to interfere with money bills. At the Simla session the Council passed fourteen Bills.

In the Supplementary Grants, in Simla, all demands were passed save that which was proposed to meet the expenses of the projected Indian tour of Lord Lytton's Committee dealing with the grievances of Indian students in England.

The most remarkable feature of the year was the thorough cordiality between the Legislature and the Executive. The former cheerfully co-operated with the Executive in voting new taxes, and the latter co-operated with the Legislature in the general enunciation of its policies, particularly in the fiscal and military fields.

1922—Continued Cordiality.

The year began very well. The admiration and gratitude of the Indian educated classes for the work of one of the joint founders of the present constitution, Mr. E. S. Montagu, found two opportunities of expression once on the eve of a censure debate in the Commons and again when he was virtually dismissed by Mr. Lloyd George from his Cabinet under circumstances too well-known to need recapitulation. The fear was expressed that Mr. Montagu had been sacrificed for the anti-Turkish policy of the Government as well as for the anti-Indian prejudices of the Tory Party, which dominated the Cabinet. The Assembly and later on the Council, passed a resolution recording its appreciation of his great work at the India Office and its regret at his departure from it. A motion on the "political" strike on the E. I. R. was talked out in the Council.

Much attention was again paid to constitutional advance. A well calculated step was taken by the Assembly when it passed a motion recommending to the Governor-General the immediate abolition of the distinction between votable and non-votable items in the Budget. The Law Officers of the Crown, however, declared that the Viceroy had no such power to do, and this announcement caused a great deal of disappointment in the Assembly. Another attempt to forge ahead met with failure, which was the proposal to leave the matter of choosing India's delegates to the Imperial and such other Conferences in the hands of the Legislature. The Assembly even went further in September at Simla when it was proposed by certain members to consider the Near Eastern crisis which was actually rising into what seemed an inevitable clash between the British

forces stationed at Chanak and the Turks advancing from their Asiatic homeland. This excursion into the region of foreign politics was promptly given up as the Viceroy had consented to receive a deputation. And yet another attempt which failed was Sir M. Dadabhai's request that the legislature should have the opportunity of pronouncing on any treaty arrangements involving fiscal obligations and international trade relations.

The Council of State witnessed an infructuous debate on the subject of introducing the constitutional practice of voting an Address after the "Speech from the Throne"—after the Viceroy's speech at the opening of each session of the Indian Legislature. Dr. Gour had to withdraw his motion, which was opposed by the non-officials, for the establishment of a Privy Council in India.

In other respects some progress was registered. Standing Committees of the Legislature were attached to the various departments so as to provide an opportunity for the non-officials to pick up a knowledge of the working of the administrative machine. The cry of Indianisation of the Services on financial, political and administrative grounds grew insistent and was intensified later on by the "Steel Frame Speech" of Mr. Lloyd George, against which in the form of a resolution the Assembly protested as the very negation of the growth of responsible government in India.

Government achieved a complete victory when the Assembly decisively rejected a resolution demanding the abandonment of its "repressive" policy against the non-co-operation movement and the Council threw out a proposal for a round table conference. Its measures were supported. The success was overwhelming when later on the House unanimously rejected another resolution demanding the release of the Ali Brothers.

Full appreciation of the manner in which the authorities were dealing with the Moplah outbreak in Malabar was expressed by the withdrawal of two motions urging withdrawal of martial law and the appointment of a committee to report on the disturbed condition. The Moplah Train Tragedy was debated, the occasion of which was taken by Government to express their regret at the incident. A motion of adjournment over the Gurukabagh affair offered an opportunity to Government to explain their position. The treatment of political prisoners as first class misdemeanants was urged and by way of reply, Government announced an all-India policy which should be based on the status, character and education of the prisoner.

Among other things reform of the railway administration and industrial development were very ably pressed on the attention of the Government. A committee was appointed to study the possibility of creating a mercantile marine for India.

The Legislative record was again pretty heavy. The press and "repressive" laws were repealed while an amended Official Secrets Act was passed, and also a Bill to punish the spreading of disaffection among the police. A University was established at the Imperial Capital by the passage of a Bill. The Benares

Hindu University Act was amended. Some labour laws were enacted. Finally, Dr. Gour's Civil Marriage Act Amendment Bill was introduced. Very numerous were the other Bills which were either rejected or still-born.

The one inauspicious feature of the year was the certification by the Viceroy, as essential in the interests of British India, of the Indian States (Protection against Disaffection) Bill, when the Assembly refused leave to introduce it. For the moment, the crisis was tided over but, as it seemed at the expense of the popularity of the Viceroy and his advisers.

In matters financial the same old distressful tale was repeated. The deficit in the Budget amounted to 34 crores, and it was proposed to meet it by an increase in railway passenger fares, by enhanced postage rates, by an increase of the general customs duty from 11 to 15 per cent.; of the cotton excise duty from $3\frac{1}{2}$ to 7½ per cent.; and of the duty on sugar from 15 to 25 per cent.; while further increases were to be placed on imported yarns, machinery, iron and steel, railway material and alcoholic liquors, on matches and salt and articles of luxury. It was also proposed to raise the income tax and the super-tax and to double the duty on salt and matches. In the discussions of the demand for grants, the Assembly made a five per cent. all round reduction amounting to Rs. 95 lakhs. It also refused to raise the salt duty, the cotton excise duty, and the existing duty on machinery and on cotton goods. The result was a total increased deficit of about nine crores. Thus the Assembly forced a Retrenchment Committee on the Government.

In the course of the year a few financial resolutions were moved in the Legislature dealing with questions of currency and exchange, retrenchment, loans, reverse councils and contributions from the provinces to the Central Government.

A Bill consolidating the law relating to income-tax and super-tax was passed after a compromise between the two Houses. A grant of 150 crores of rupees was voted for capital expenditure on the Indian railways for the next five years. By a resolution, Sir V. Thackersey demanded a committee to consider and report at an early date on the steps to be taken to encourage the establishment of necessary industries so that a large part of the sum of 150 crores be spent in India.

For the present, the question of separating railway from the general finance was postponed, while by a resolution in the Council it was demanded that in future separate revenue and expenditure accounts should be kept of the working of the military and strategic railway lines. Finally the Assembly voted a grant of fifteen lakhs for the British Empire Exhibition.

The Supplementary Grants were passed as demanded in the September Session to the tune of Rs. 13,09,000.

Equality of status for Indians in East Africa was again urged, the opportunity being utilised to protest against the pronouncement of the Colonial Secretary, Mr. Churchill, to make Kenya a "characteristically British Colony." A foretaste of the future was revealed in Mr.

Khaparde's resolution, which was withdrawn in the Council of the State, asking for reciprocal legislation in British India on the lines of colonial measures imposing disabilities on Indians.

The Assembly thus justified the tribute paid by the Viceroy in his opening speech at the Simla session that there was reason to be satisfied with the success the Legislature had already achieved during the short term of its existence, and that it had created an atmosphere favourable to the development of the constitution. In the same speech, His Excellency once again stated with reference to the Non-co-operation movement: "There must be respect for law and order and support for constituted authority and for established Government." Other remarks in the speech relating to retrenchment in the cost of administration, creation of Standing Committees, general legislation, and Mr. Lloyd George's speech found their responsive echo in the proceedings of the Legislature at the session.

As the Assembly could not interfere in foreign affairs, the Viceroy felt it his duty to reassure the people of India in his opening speech at Simla in September that his Government were still making representations regarding the need of radical changes in the Treaty of Sevres with the Turks.

1923—The Decline of Amity.

The Legislative Assembly opened for the first time in 1923 on the 15th January. The year was the least harmonious of the three, so far as the relations between the Executive and the Legislature were concerned. The idea had got into the minds of the legislators that the new Secretary of State, Viscount Peel, was less progressive than his predecessor, Mr. Montagu, and the Government of India did not have their former freedom of movement. A Royal Commission had been appointed to inquire into the grievances, the conditions of service and organisation of the Superior Services against the general wishes of political India, and, it was believed, against the wishes of the Government of India themselves. There was then the new Secretary of State's despatch on the demand of the Assembly for further constitutional advance in which for the present any such hope was put off as impracticable. The Assembly with considerable force had to reassert its right to move nominal reductions in non-votable items in the Budget with a view to raising questions of policy. It refused to vote money for the Royal Commissions but the item was restored by the Governor-General; so also an item concerning the transfer of railway annuities from the revenue to the capital side. On top of this came the certification of the salt tax. That is to say, within a week or two the extraordinary powers vested in him were thrice exercised by the Viceroy. The barometer now indicated "foul," the weather was stormy. It was now for the Assembly to endeavour to circumscribe the use of such powers, as also the powers of the Upper Chamber to interfere with its decisions. The demand for constitutional conventions within the structure of the Government of India Act was increasingly pressed.

Next in importance came the question of Indianisation of the Military and Civil Services, on which the debates were long and frequent. A policy of Indianising eight units of the Army was announced, but it did not prove satisfactory, and the complaint was loudly made that the Government were going back on the proposals previously moved in 1921 by Sir Sivaswami Aiyer and accepted by them. The Assembly here again detected the "hidden hand" of the Secretary of State. The Civil Services attracted hardly less importance. Though not complete yet substantial Indianisation was demanded, the communalists asking for the representation of minorities.

The problem of State versus Company management was finally settled in favour of the former, while a policy of protection of the discriminating variety was accepted for the first time by the Government as a goal to be pursued for industrialising India. The decision was come to after a long searching of hearts, as Mr. Innes, the Commerce Member, put it. Industrial finance was on the tapis. Statistical accounts in better form, indicating the industrial potentialities of the country, were asked to be published. Irrigation was in the picture but being a provincial subject was only kept in the background. Rural reconstruction engaged a few hours' academic debate in the Council of State. The mercantile section of the legislators paid a good deal of attention to the policy of stores purchase, insisting that the State should take the opportunity to make its purchase to assist Indian industries and, also, that it should buy in the cheapest market. A heated debate on Government intervention in the Alliance Bank affair elucidated the views of the legislators as to the extent to which they expected the State to intervene in such matters. In the midst of the constitutional activity the fate of the political prisoners who had, on account of the Non-cooperation creed, courted jail was not forgotten, and attempts were made to get the leaders released and the electoral ban on them lifted.

Besides this great activity, the enactments of the Legislature deserve mention, chief of which was the monumental recodification of the Criminal Procedure Code. The Racial Distinctions Act sought to remedy grievances of long standing with respect to the status of

European and Indian accused in criminal cases. Social legislation was passed to better the condition of the worker and elevate the status of women.

The question of Indians overseas always stalked the stage throughout the year. The problem of Indians in Kenya followed the Legislature like a shadow. Early in the year, a series of questions were put regarding the franchise of Indians domiciled there and the alleged threat to their lives by a section of the people on the 23rd January, and the last performance of the Assembly was to pass a Reciprocity Bill to which reference will shortly be made. The last days of the first Legislature were thus, as His Excellency the Viceroy regretted in his valedictory address, "overclouded by events regarding the treatment of Indians overseas."

The Viceroy made up for his omission to address the Legislature at the opening of the January session by a lengthy speech at the end of the Simla session, which also saw the end of the life of the first Legislative Assembly. His Excellency highly appreciated the spirit in which co-operation had been offered by those on whom new opportunities of service had been conferred, and advised the legislators not to mind their detractors. He referred to the steady influence the Legislature had exerted on the Executive and the co-operation it had given in times of trouble and agitation. His Excellency alluded to the Kenya decision, and expressed his regret that the Indian view could not have been more completely met. The Reciprocity Bill could not reach, he said, the other Chamber that session and "meanwhile there will be opportunity for further information and reflection." "You know the port to which your ship is sailing; you have set your course; the star by which you steer shines bright before you," thus concluded the memorable address.

The Assembly, after the Viceroy's address, was prorogued to be subsequently dissolved.

Fresh elections were ordered, in which the pro-Council section of the Congress Party took part and won a fairly good number of seats in the Assembly and the provinces except in Madras and the Punjab.

CONSTITUTIONAL DEMANDS.

In 1923 the Legislature followed three plain courses for pressing forward with constitutional changes in popular interests: (1) Direct requests for the amendment of the Government of India Act of 1919; (2) establishment of conventions within the structure of the Act; and (3) modifications of the rules made under the Act. The prominence given to the constitutional problem could be seen from the six or seven major debates that took place in the year in both Houses as occasion arose. The ball was set rolling on the 22nd February when Mr. T. Rangachariar, a prominent member of the Assembly, moved a resolution recommending to the Governor-General in Council to convey to the Secretary of State the Assembly's feeling of extreme dissatisfaction at the despatch, dated the 2nd

November 1922. In a speech which he prefaced with the remark that he did not expect anything better from Viscount Peel, Mr. Rangachariar attempted to rebut the assumptions of the Secretary of State in his despatch. He criticised the view that there was enough room within the structure of the Government of India Act to expand the constitution, and asked why the despatch did not explain how it could be done. The Secretary of State himself, it was added, was not allowing that freedom and liberty of movement to the Government of India which was theirs by right. If the "merits and capabilities" of the electorate were to be tested till another advance could be made, the speaker said, they would have to wait till doomsday, and when the next Statutory Com-

mission met, it would not at that rate find the country fit. Mr. Rangachariar added that if they were to "work the present constitution for a hundred years, they would never evolve anything out of it." Munshi Ishwar Saran, Sir D. Sarvadhikary, Dr. Gour, and Dr. Nandlal supported the motion. Mr. Moir and Mr. Allen spoke in support of the Secretary of State. The debate had to be adjourned *sine die* owing to the late hour, the Home Member reserving the right of reply if the debate came up again. The significant interjection by Sir Malcolm Hailey of the remark that the Government of India were not a party to the resolution of the 22nd September, 1921, asking for further reforms evoked contradiction from the non-official benches.

Logically speaking, the counterpart of the incomplete debate was taken up so late as July 18, in connection with the resolution of Dr. Gour, who moved that "the Secretary of State be requested to carry out his suggestion contained in his despatch on the subject of further reforms possible under the existing constitution." Taking his stand on Section 19A, 96B (2) and 45A (a) of the Government of India Act, Dr. Gour urged that the Secretary of State should relax his superintendence, direction and control over the Government of India, give power to the Governor-General in Council to make rules regulating the public services, and make provision by rules for transfer from among the provincial subjects to the Governor acting with the Ministers. He complained that the Act had not been fully explored and exploited in these respects. The official spokesman challenged the interpretation of Dr. Gour that the despatch referred to any action that was to be taken by the Secretary of State. What the Secretary of State, according to him, meant was that the Legislature should consolidate its position in the country by its own work and substantiate its claim for advance. The Home Member next proceeded to show, with reference to the section singled out by the mover, that even if the changes could be effected, they would not necessarily amount to any increase in the powers of the Legislature. Mr. Rangachariar warned the Government that the co-operation of the non-officials had till then found no responsive echo from the official benches and they were losing faith in the Government. The motion was carried.

Certification Powers.

In September the Assembly once more interested itself in the matter of constitutional progress by supporting Dr. Nandlal's motion that changes shall be so made in the present Government of India Act that the Governor-General in Council shall not use his special emergency powers under Section 67B to overrule the decision of the Indian Legislative Assembly. The speaker referred to the effect of the certification of the Salt Tax on the country and demanded a guarantee that the Act would not be misused and there would be no more "political jugglery." The Home Member, opposing, acknowledged the resentment aroused in the country by the certification of the Salt Tax, but asserted that even on the assumption of misapplication in an instance, a law justifiable

in itself, need not be abolished. After quoting precedents, he reminded the House that the necessity of such reserve power for the executive to secure essential legislation had been admitted everywhere, also in India, and that the existence of these powers was the condition precedent when the Government of India Act was passed. "If the resolution were acted up to it would be equivalent to the grant of full control to the Indian Legislature limited only by the power of veto", and it would involve "a radical reversal of the system of transitional Government which has been sanctioned by the Government of India Act." He added that full responsibility could be given only to a legislature under certain conditions, such as an intelligent electorate, which did not exist to-day in India.

That section of the Assembly which refused assent to the "sweeping changes" proposed by Dr. Nandlal's resolution moved a parallel resolution by which it was sought that the words "or interests" occurring between the word "tranquillity" and the words "of British India" be deleted, and any certification should be confined only to an emergency imperilling tranquillity. The resolution was carried at the adjourned debate the next day, the 10th July, in spite of the official warning that the House was playing into the hands of Non-co-operators. What would happen, in the future, it was asked if the majority in the Assembly consisted of persons who would not be prepared to vote supplies for carrying on the administration?

"A True Second Chamber."

Echoes of the Salt Tax certification were again heard on the 17th July when Mr. Samarth proposed in the Assembly that effect be given, by an amendment of the Government of India Act, if necessary, to the statement of the Joint Parliamentary Committee that they "have so constituted the Council of State as to be a true second Chamber." It was demanded that it should be made obligatory that no money bill originated in the Upper House, or amended in a manner to increase any proposed charge or burden on the people as voted by the Legislative Assembly. Pleading for the proposed restriction, the mover said that the House, i.e., the Assembly, which was more popular and voted the supplies, should have the final voice and the Council of State should have no powers to interfere with taxation proposals as it did in connection with the passing of the Salt Tax. Sir Malcolm Hailey took the opposite view, that the Upper House had never been intended to be excluded from the power of controlling Money Bills, as it also contained an elected majority. He would not accept all the parallels drawn by Mr. Samarth from foreign countries. The House was reminded by another speaker that the Assembly was not yet a House of Commons to claim so many privileges, and the motion would have an undesirable effect on the relation of the Assembly with the other House. A number of non-officials supported the motion, stating that the second Chamber should only be of a revising nature and all trouble should be avoided in the future over the question of money power. After the Home Member, in his reply, repeated his opinion that "the existence

of full powers on the part of the Council of State was justified in the interests of the early divestment of its powers of control in regard to India by the British Parliament and of the harmonious development of India," the House divided, and the motion was lost by a majority of five votes (35 to 30).

Constitutional Conventions.

The second method followed by the Legislature in setting the pace of constitutional progress was, as pointed out at the beginning, the establishment of conventions, which, when once grown, it carefully guards against assaults, real or imaginary. In two previous budget sessions, opportunities had been given to non-officials of raising points of importance under non-voted heads by moving nominal reductions on voted heads. When the new Finance Member on March 13, raised objection to a motion to cut a rupee out of the provisions for annuities and sinking funds under Railways as the item under discussion was a non-voted one, and the President upheld his point, there was quite a commotion in the House that a privilege and a convention was being assailed, and strong remarks about a policy of reaction in the Government of India was made. Sir Malcolm Hailey came to the rescue by announcing an *ad interim* arrangement openly and without prejudice to the future, to discuss on nominal cuts relating to votable expenditure general question relating to non-voted expenditure. For the present the trouble was tided over.

The Assembly lost rather than gained a point on the 19th March, when the President ruled that proposals for taxation, even when brought up in the form of amendments to the Finance Bill, could not be made effective except when moved from the Government Benches.

Sir Sivaswami Aiyar took things further on July 17, when he moved that the Secretary of State should accept a convention of non-interference "in a matter of purely Indian interest where the Government of India and the Indian Legislature are in agreement." He explained his object to be to strengthen the hands of the Indian Government, obviously hinting at the non-official suspicion that the Government was not a free agent in making many important decisions, and the Secretary of State had been interfering too much to the detriment of Indian welfare. The debate had to be adjourned.

Sir Purshottandas Thakordas, in the Council of State, on the 16th July, moved a resolution for the establishment of a convention by which in case of a financial dispute, the Government of India should not compromise with the Secretary of State without the previous consent of the Legislature in India, and in any such case where arbitration was resorted to the arbitrators of such disputed items shall be the Premiers of the Empire in Conference assembled and nobody else. The resolution was defeated on constitutional and administrative grounds.

The third method followed by the Legislature was that of pressing for modification of rules under the Government of India Act. A gentle stretch for the acquisition of further powers for the people's representative was made in the Council of State by Mr. Phiroze Sethna, then he moved on 21st February that steps be taken to modify Rules 23 (1) of the Rules

of Business for the Council of State and the Legislative Assembly and the corresponding question Rule so as to permit the Indian Legislature to take cognisance by resolutions and questions of matters, as for example, the Princes Protection Bill, on which the Government of India had undertaken legislation. Mr. Sethna's main contention was that if they could legislate on a topic they could also interpellate on the same which freedom, he complained, was denied under the present rules. The official spokesman saw no real occasion for the change urged since the relations were guided by treaties and no legislation affecting them would be introduced into either Chamber. They, however, gave an assurance that at the proper moment Government would be prepared to give their most careful consideration to the desirability of modifying the rule on the lines suggested. The resolution was withdrawn.

Several debates were raised and questions put frequently to ascertain the intention of the Government of India. For instance, it was asked whether Lord Reading had forwarded any despatch to the Home Government urging the need of further constitutional reforms. But the questions were not answered in the positive.

Indianisation of the Army.

Next in importance to the question of constitutional advance, the Legislature paid attention to the subject of Indianisation of the Services, both civil and military. The conviction found lodgment in its mind that if the Indian demanded self-government, he must be also prepared for defending his country himself, and to have a foreign civil service under an indigenous Government, it believed, would look anomalous. The necessity, therefore, arose for avoiding a lop-sided development of the Indian polity. Throughout the year the legislators hammered that belief of theirs on the Government of India and Whitehall.

Early in January, the suspicion was voiced that the scheme of early Indianisation of the Army, previously accepted by the Indian Government, had been hamstrung by the new Secretary of State, and it was feared that the question had been shelved for a long time to come. To overcome the suspected reaction and to urge clear steps forward was, therefore, the first task of the Legislature. It would be easy if the work done in Simla and Delhi in this connection were analytically explained. The methods followed were: (1) to suggest changes in the existing recruiting arrangements; (2) to criticise the heavy army expenditure; (3) to ask for the diminution of the European element, correspondingly increasing the Indian if necessary; (4) to urge the grant of King's Commissions to Indian youths of ability and status; and generally (5) to reawaken the martial spirit in the people.

The "unwise, expensive and inequitable" Army Amalgamation Scheme of 1859 came in for a very powerful and learned attack at the hands of Sir Diashaw Wacha in the Council of State. The speaker traced the "intolerable burden" of the present military expenditure to the Army Amalgamation Scheme, as also the several financial misfortunes of India, and demanded that the dictation of the British War Office should be put an end to. India, he

urged and he was supported by several speakers who followed, should have a European force of her own under the control of her own Government. The Commander-in-Chief, who opposed the resolution, denied the need of a separate force and emphasised it would be more costly and less efficient both as regards its maintenance and recruiting. India, on the other hand, would benefit by having at her service a portion of the British Regular Army. Finally His Excellency denied the dictation of the British War Office, and held that in their army relations with Great Britain, they followed business lines and made no surrender. The motion was lost.

The Indian Budget.

The occasion of the Indian Budget releases an enormous volume of criticism of military expenditure. Nor was the year 1923 an exception. Both in the Assembly and the Council of State, the elected members levelled strong criticisms against the proposed expenditure of 62 crores of rupees, in spite of the fact that it indicated a cut of 5½ crores less than the previous budget owing to reductions, immediate and prospective, in the strength of the Army and in spite of the promise of further cuts as soon as possible. The Assembly expressed the fear that the budget would never balance with the military expenditure growing at that pace. Immediate curtailment of the obligation in Waziristan and on the Frontier was pointed out to be the best way out of the bad job. It was freely asserted that the Indian Army was too numerous and too well-trained for Indian purposes, and the real object of maintaining so much efficiency and strength was to utilize it for extra-Indian purposes. Allegations were made that enormous retrenchment could be done in the non-fighting sections of the Army, where waste was pronounced to be prevalent. An equitable and just adjustment of the capitulation grants was also urged so as to minimise the drain of money to the British War Office. A plea for the bettering of the lot of the Indian sepoy was advanced by Sir Sivaswami Aiyar, perhaps the most prominent member of the Assembly who patiently studied the Indian military problem. The Commander-in-Chief rather added to the unpleasant impression of the Army about the ever-rising army expenditure by withholding his support to the Incheape Committee's recommendation that Indian military expenditure should, when normal conditions prevailed, be standardised at 50 crores of rupees per year. He had taken several purely military risks. His Excellency said because there was the greater financial disaster yawning before them. He had accepted the Incheape "cuts" as the external and internal conditions of India were such as to justify them. He denied that the Army was either too efficient or too strong. Lord Rawlinson held out the hope that the frontier commitments might diminish with the growth of tranquillity in that area. Military expenditure being a reserved subject, the Assembly could not vote upon it, though several members wished it should be made votable.

Supply of Indian Officers.

The Legislature was alive to the future anomaly of running an Indian or Indianising army with

the British officers, and attempts were made by it to pave the way for the advent of Indian officers. It was demanded by a resolution in the Assembly on the 24th January that all vacancies in the Indian regiments be in future filled by Indian Commissioned officers directly recruited and promoted from the rank of Viceroy's Commissioned Indian officers. The Commander-in-Chief while opposing any violent departures from the traditional efficiency of the Indian Army and regretting the possibility of the ultimate elimination of the British officer, welcomed the new position of things they were turning round to, and accepted the view that self-defence should follow self-government in its path. "To progress surely and safely without undue risk or danger to the community at large," was to be the keynote of the Army policy, he added. And this characterised the great announcement Lord Rawlinson made at the adjourned debate on February 17, the object of which was "to give Indians a fair opportunity of proving that units offered by Indians will be efficient in every way."

It has been decided," said Lord Rawlinson, "that eight units of cavalry or infantry be selected to be officered by Indians. This scheme will be put into force immediately. The eight units to be wholly Indianised will be mainly infantry units, but there will be a proportion of cavalry. They will be chosen judiciously to include as many representative types as possible of Indian battalions and cavalry regiments of the Indian Army. Indian officers holding commissions in the Indian Army will be gradually transferred to the Indianising units so as to fill up the appointment for which they are qualified by their rank and by their length of service, and then the process of Indianising the units will continue uninterrupted as the officers gain seniority and fitness in other respects which will qualify them for the senior posts." "Simultaneously with the Indianisation of these selected eight units," the Commander-in-Chief added, "Indians who qualify for King's Commission will continue, as at present, to be posted to the other units of the Indian Army. The number of Indian cadets now sent to Sandhurst each year, if all pass out successfully, is more sufficient to replace the normal wastage in the eight units alone." Lord Rawlinson next appealed to the people of India to support the Indian officers of these Indianised regiments 'with living and with practical encouragement' or by this means only can Indianisation hope to deserve and command success."

The announcement was welcomed and stopped the debate abruptly. The scheme was criticised in some quarters as halting, half-hearted and very limited in scope. The original motion as well as several other amendments fell through.

"Progress not Satisfactory".

But the atmosphere created by the announcement seemed to be only temporary and soon the dissatisfaction at the halting nature of the scheme grew more articulate till on 4th July Sir Sivaswami Aiyar called the attention of the Assembly to express his opinion on the "unsatisfactory nature of the progress made with regard to the Indianisation of the Army." He referred to the big batch of resolutions

previously passed by the Assembly in concurrence with the Government, which he complained had been either scotched or killed. He further complained—and the Government spokesman immediately admitted—that some of the most important recommendations had remained unfulfilled—those relating to the admission of Indians to the commissioned ranks of the Royal Army Medical Corps, the Royal Engineers and the Royal Air Force, the increase to 25 per cent. of the annual total of the number of commissions granted to Indians, and the establishment of an Indian Sandhurst. The changes were put down as large and revolutionary by His Majesty's Government and the view was expressed that the proposed reforms would be either unsuitable or impracticable. Sir Sivaswami Aiyar's suggestion of confining the Territorials to Indian Service alone was condemned as ruinous by the Commander-in-Chief, who also added that he could not get Indians into the essentially British units of the Royal Air Force, the Artillery and the Royal Engineers. It was stated that the question of introduction of the economic system of short colour service was still under consideration. The official amendment enabling the Government of India to choose an auspicious moment to reopen the question with the Home Government was defeated and the Assembly adopted Sir Sivaswami Aiyar's resolution.

The Arms Act.

The liberalisation of the rules under the Indian Arms Act so as to allow a large number of qualified citizens to buy and keep arms for self-protection and to give them chances of cultivating a martial spirit has been a constant theme with Indian publicists. A Committee was appointed to go into the question in 1922. It was divided and Lala Sukhlal Sinha proposed in the Council of State, on February 26, that immediate effect be given to the recommendations of the majority. He proposed several alterations which were all rejected by the Council of State.

Compulsory national military training for Indians, the object of which was to revive and broaden the martial spirit in the people and to enable the Empire to draw upon the vast resources of India's manpower, was moved by Mr. Phiroze Sethna in the Council of State on February 16. The official criticism was to the effect that the scheme was impractical and unnecessary that militarism would be incompatible with the pacific ideals of the League of Nations of which India was a member, and that combined with the mechanical difficulties, the expenditure would be grotesquely intolerable. The resolution was lost.

Indianisation and the Civil Services.

Throughout the period of its existence the Legislature devoted a good deal of its attention to the Indianisation of the Services. As the character of the Government changed, it was held, so should that of the administration. There could not be an Indian Government and a British Civil Service. So immediate stoppage of recruitment, partially at first and completely later on, continued to be urged. The financial difficulties of the Government of India and the other provincial Governments provided a strong

argument to the non-official members to urge the replacement of the present "costly European Services" by the cheaper Indian agency. It was feared by some that the fixing of any proportion between Europeans and Indians would only postpone the grant of self-government. The suspicion had got hold of the public mind only in the year in India that "an ultra-conservative Government and a reactionary Secretary of State" were trying to retard the process of Indianisation and the Government of India, it was believed, were bound hand and foot by the dictator at Whitehall. On the other hand, owing to the high cost of living, the changed political circumstances, and the constitutional reforms, the Services were agitating for better pay and prospects and guarantees. Indian politicians believed that in spite of the financial stringency, the demand of the Services would be satisfied and an attempt would be made to perpetuate the existence of the British element in the Services. The Press in England and in India was full of rumours of the appointment of a Royal Commission.

All these suspicions found vent in the course of the discussion of a resolution in the Council of State on 25th January, when Professor Kale moved for the production of the correspondence between the Government of India and the Secretary of State on the question of the improvement of the conditions and prospects of the Indian Civil Service and other Imperial Services, "especially in connection with the appointment of a commission to inquire into the matter." The resolution was defeated at the instance of Sir Malcolm Hailey, who urged that he could not break the traditional confidence which had always been preserved between the authorities at Simla and Whitehall. The Rt. Hon'ble Srinivasa Sastri in the course of the debate put in the plea that the differences alleged to exist between the two authorities should be ascertained in day light, and that the hands of the Indian Government should be strengthened in a matter in which it was at variance with the Home Government, the importance of which action, he said, could not be overrated.

A Royal Commission.

It was in the course of this discussion that the appointment of a Royal Commission was announced. The announcement was a signal for an outburst of criticism in the Council and later on in the Assembly. The terms of reference were not precisely settled but, broadly speaking, it was contemplated that the Commission would be required "having general regard to the necessity of maintaining a standard of administration in conformity with the responsibilities of the crown for the Government of India, and the declared policy of Parliament in respect of the increasing association of Indians in every branch of administration, and having particular regard to the experience now gained by the operation of the Government of India Act, to inquire into the organisation and general conditions of service, financial and otherwise, of the superior Civil Services in India and the best methods of ensuring and maintaining the satisfactory recruitment of such numbers of Indians and Europeans respectively as may be decided to be necessary in the light of the considerations above referred to."

The Home Member, who made the announcement before Prof. Kale's resolution could be moved, had to defend the appointment of the Commission as the resolution was not withdrawn. He advised Indians to take advantage of the liberal scope of the Commission's terms of reference and press their views on Indianisation before it. He endeavoured to disabuse the popular mind of the suspicion that the Commission had been appointed merely to increase the emoluments of the Services and get round the reforms. The non-official opposition, the chief characteristic of which was the unanimity of opinion between Europeans and Indians, opposed the Commission on the grounds of its cost at a time of financial stringency, and of the occasion it would create for increased racial bitterness. It was urged that the motives in appointing this body were other than those officially mentioned, and if the grievances of the Services required to be redressed, it was for a small expert committee of the Government of India to do it and not for a Royal Commission. It was further contended that in opposing the appointment of the Commission by the adjournment debate, the non-officials were really helping the constitutional position of the Government of India on whom, it was repeatedly alleged, the Commission had been forced by the Secretary of State. The Assembly avenged the defeat in the Council of State by carrying the adjournment motion.

Later, the provision in the budget of three lakhs of rupees for the cost of the Commission was successfully opposed in the Assembly on the same grounds and was restored by the Viceroy who exercised his special powers.

A Drastic Suggestion.

On the 24th March, Mr. Venkatapathi Razu, a member from Madras, moved in the Assembly a resolution recommending that with a view to "effecting substantial reduction in expenditure under Service heads, necessary steps be taken for stopping further recruitment for services outside India, excepting the employment of foreign experts on special terms when necessity arises." This whole-hogging resolution was opposed by the Home Member, who pleaded the Royal Commission would handle the task much better than any one of themselves in the Assembly, and it would consider the solution of an Indian standard of pay for the Indian members of the Services now and hereafter as the way out of the financial difficulties. The debate had to be adjourned without much discussion, which, however, ensued on two occasions again.

Mr. Agnihotri (C. P.) moved in the July Session of the Assembly that no alteration in the pay, pensions or other service conditions of the Imperial Indian Services be made before giving the Indian Legislature an opportunity for an expression of their opinion thereon. The mover claimed for his resolution the character of a compromise inasmuch as it did not take away the constitutional right of the Secretary of State to deal with the Services, but at the same time provided that the people's representatives should have a say in the matter, particularly (it was alleged) when the emoluments of the Services were being rapidly increased despite the present financial stringency. Dr.

Gour moved an amendment that before taking any action on the recommendations of the Royal Commission, an opportunity be given to the Assembly to express its views on the recommendations. Sir Malcolm Hailey denied that Indianisation was being retarded or the Services' pay and pension scales were being disproportionately raised. Leaving a wide margin of freedom for the Government of India to carry out any immediate orders of the Secretary of State based on the recommendations of the Royal Commission, the Home Member gave an assurance that its recommendations would be duly laid before the Assembly. Both the resolution and the amendment, however, were negatived.

Personnel of the Lee Commission.

An opportunity to express dissatisfaction at the composition and personnel of the Royal Commission was taken on the 23rd July when Syed Raza Ali moved in the Council of State that "in order to allay the apprehensions produced in India, it is absolutely necessary to add to the Commission two non-official representatives of Indian public life." The Commission is composed of Lord Lee of Fareham (President Sir Reginald Craddock, Sir Cyril Jackson, Prof. Petrie, Prof. Coupland, Mr. Bhupendranath Basu, Mr. Kaul, Sir Habibullah Khan and Mr. Samarth (in place of Sir Chimanlal Setalvad who was at first appointed but resigned). Mr. Raza Ali complained that the Indian members were in a minority, and that no member of the Legislatures was appointed by the Commission, and of the four Indians two belonged to the provincial service and were never in public life before. The official spokesman said that the composition could not be criticised by any House of Legislature and that place could not be found on it for all sections and interests. Without a division the resolution was negatived.

If the legislators made attempts at Delhi and Simla for increasing the association of Indians with the Services so that in course of time they may acquire the practice of administering India through an Indian agency, they also endeavoured to see that Indians got the best of experience in the most important aspects of the Service—the Secretariat. For this purpose, Mr. Srinivasa Sastri moved in the Council of State, on the 28th February, that "in order to give the Indian members an insight into the larger problems of Imperial administration and policy" at least one such officers should be appointed as Secretary, Joint Secretary or Deputy Secretary in every department of the Secretariat of the Government of India, Mr. Raza Ali subsequently substituted the word "Indians" for the word "Indian members of the Indian Civil Service". Mr. Sastri's contention was that unless a large number of Indians were admitted into the Imperial Secretariat, it would not be possible to prepare Indians as rapidly as possible to sustain their own self-government. Mr. Crerar for the Government held that the criterion of selection by proved merit and ability could not be departed from, and the rights of the European I.C.S. members for secretaryships could not justly be ignored, and he moved an amendment that "Indians should be afforded wider opportunities to become qualified for appointment for the posts of secretary, etc." The amendment was lost and the resolution carried. The popular victory

was hailed with delight on the non-official benches.

At the same place, on the same day, an official amendment was carried as against the original resolution which recommended that a larger number of Indians be employed in the cadre of traffic inspectors in the Transportation Branch of the State Railway in India than is the case at present.

Communal Representation.

Closely associated with the problem of Indianisation of the Services is the problem of communal representation therein. That the services are at present overweighted with particular classes and communities is admitted, such as Brahmins in Madras and Hindus all over the country generally. Representatives of Mussalmans and non-Brahmins, also Anglo-Indians, were always found to be urging the even distribution of the fishes and loaves of office. On the 24th January, Colonel Gidney moved in the Assembly "that the present system of conducting simultaneous examinations for the recruitment to the I. C. S. be changed and a different method so as to give a fair chance to candidates belonging to different communities and different provinces be devised, if necessary, by a limited form of competition. The debate grew hot on the subject and Sir Malcolm Hailey put the lid on the cauldron by making a very much appreciated announcement of Government's policy as follows:—

"The Public Services should be recruited on the principle that they should be filled by the most competent men available. This principle is, however, subject to modification in the interest of the training of Indians in the administration of their own affairs. Full opportunities should be afforded to Indians to qualify themselves for the more important posts in the public services and to demonstrate their fitness for responsible duties. It must, however, be recognised that intellectual qualifications combined with physical capacity should not be the sole test for admission to important posts in the public services. Due regard must also be given to such considerations as character and hereditary connections of candidates both with the Government and with the people with whom their work will mostly lie; while in the present conditions of India, it is essential that there should not be an undue predominance of any one class or caste".

The Home Member affirmed that nomination would be made only in order to secure to some extent the representation of provinces and communities which could not be secured through the open door of competition. The test of character, intelligence and efficiency must always continue in the matter of selection. The motion was negatived.

Provincial Jealousy.

The same plea of communal representation took an unedifying turn on the debate, on the 10th March in the Assembly, for communal and provincial representation on appointments directly under the Government of India. Sir D. Sarvadhikari moved an amendment that "steps should be taken to secure that the services are not unduly overweighted with representatives of any community or province".

Chaudhri Shahabuddin added at the end of the amendment "and that as far as possible claims of all provinces and communities are considered". The sole arguments of the opponents of the original resolution was that nothing should be sacrificed for efficiency while the supporters retorted that in that case, no objection should be taken to the introduction into the Indian services of those Europeans and foreigners who were more efficient than Indians and that the various parts of the Indian nation should be offered their respective shares for the sake of communal peace and solidarity, provided the minimum of qualifications was satisfied. Sir Malcolm Hailey, who supported the amendments, reiterated the Government's policy and clearly demonstrated how impossible it was to frame any proper regulations to meet the wishes of the framers of the resolution. At the same time, he added that he was aware that if their administration were overweighted by any one community, then there would be an administrative loss. Sir Devaprasad Sarvadhikari's amendment was carried.

Economic Problems.

The Legislature displayed enormous interest in the economic welfare of the country. More than a dozen important resolutions, apart from innumerable questions, were moved in both Houses touching vital matters. The subjects dealt with may be roughly classified into trade and tariffs, industry and agriculture, transport and taxation.

Following, as it did, a series of questions in both the Assembly and the Council of State, it did not come as a surprise when on 25th January, Mr. Lallubhai Samaldas moved in the Council of State for the publication of the correspondence which has passed between the Government of India and the Secretary of State relating to the resolution passed by the Council on the 29th September 1921 with regard to the purchase of stores in England on behalf of India. The mover, who had made the subject his own, like many other Bombay members of the Legislature, gave vent to the suspicion that in spite of the demands of the non-official public of India that stores should be purchased in the cheapest market, in practice it was not the case, and that the Secretary of State being under the undue influence of English manufacturers bought from them even at higher prices. Finally he reiterated his conviction that orders for the purchase of stores should be placed direct from India if the Indian taxpayers' money was not to be thrown away. Mr. Chadwick, representing the Industries Department, affirmed that the Council's wishes in the matter were being scrupulously carried out and the resolution was withdrawn. But that much remained still to satisfy the mind of the non-officials became clear again when on the 14th March, Professor Kale re-introduced the subject in the Council of State by moving a resolution that effect be given to the recommendation of the Stores Purchase Committee which had reported in 1920, suggesting the gradual reduction and reconstitution of the Stores Department in India with a view to expanding the scope of the work of the latter and to rendering it thoroughly efficient. Mr. Chadwick moved the adjournment of the debate on the plea that

Government had to consider the recommendation of the Inchcape Committee, that in the financial circumstances of the hour, the expansion of the Indian Stores Department be postponed. Sir D. Wacha, opposing the adjournment, forcibly asserted that the High Commissioner in India had to give preference to British goods owing to pressure from the Secretary of State. It was now the turn of Mr. Chatterjee Member for Industries, to deny the statement. Sir D. E. Wacha challenging again, re-asserted that the stores purchase policy whether in India or England, was entirely within the discretion of the Government of India whose servant the High Commissioner was. The adjournment was carried.

Indian Fiscal Policy.

Though for years a subject of persistent discussion, the subject of a definite Indian fiscal policy for the rapid industrialisation of the country had been left over by the Industrial Commission owing to several considerations, and a Committee was appointed in 1921 by the Government of India to go into the matter. It reported, by a majority, in favour of "protection with discrimination."

Mr. Jamnadas Dwardas, who was a member of that body, accordingly proposed in the Assembly on the 16th February, a number of resolutions on the subject of Indian fiscal policy solely based on the recommendations of the minority, the chief of which was that "a policy of protection be adopted as the one best suited to the interests of India, its application being regulated from time to time by such discrimination as may be considered necessary by the Government of India, with the consent and approval of the Indian Legislature." The Member for Commerce in moving and explaining a parallel resolution as a substitute, laid down that for the first time the Government of India would accept a policy of tariff reform with the sole view of developing Indian industries, but he insisted upon protection being of a discriminatory kind in view of the multiplicity of interests involved, the financial exigencies of the State which depended on import, export and excise duties; the agricultural exporter, and the poor consumer who would be affected by high prices and must be protected against political corruption and the formation of trusts usual behind a tariff wall. The Finance Member, later speaking, claimed that, contrary to what had been originally proposed, the Tariff Board which was to examine the need and extent of protection for any industry, should only be an advisory and investigating body and should not be allowed to usurp the functions of the Executive by changing the tariffs on its own initiative. A number of speakers participated in the debate inevitably bringing in their various views on this comprehensive subject—the retarding effect of export duties on agriculture and the loss to several provinces of their revenue. Sound labour regulations and an equitable distribution of burdens was demanded by Mr. Joshi before industrialism was allowed to grow under a protection wall. Mr. Seshagiri Iyer, also a member of the minority of the fiscal commission, moved several amendments which covered aspects of protection left out in the original and parallel resolutions. Eventually the resolution of Mr. Innes was carried. A Tariff Board was subsequently appointed to

make an inquiry into the need of protecting the iron and steel industry of India.

No noteworthy fiscal changes were made in the Budget for 1923-24. A proposal to levy a duty of benzine and petrol was rejected as impracticable and ruinous to the trade of Burma.

Industrial Development.

Hand in hand with trade and tariffs went the question of the industrial development of India. Any intelligent understanding of the industrial position and potentialities of the country would require a careful study of the census of production, the financial and economic importance of which cannot be over-estimated. The statistical publications of the Government of India require a good deal of reform before the public can accept them as readable. Sir Dinshaw Wacha therefore moved a resolution in the Council of State on the 19th February for a census of production of India, suggesting several lines of reform in statistical publications, and he was assured by the Government that a review in the manner required would be undertaken.

Another resolution was accepted at the same place by the Government, which was moved by Prof. Kale and related to industrial finance. The mover wanted a committee of experts to investigate the possibility of State aid to industries, especially by the establishment of banks for the purpose. And yet another resolution was accepted by Government, subject to the financial demands on the Government, which recommended that 25 scholarships tenable for five years at about Rs. 4,000 per head per annum, eventually costing not more than five lakhs annually, be given year after year from the Imperial revenues to Indians of great promise, specially for research work in any part of the world and in any branch of knowledge approved by the Central Legislature. The mover, Mr. Venkatapathi Razu, emphasised the importance of research in securing industrial development.

The Alliance Bank Failure.

The question whether, and if so to what extent, Government should intervene in matters of finance and trade was the subject of a heated debate in the Legislative Assembly in the closing days of that body's existence. The Alliance Bank of Simla had recently failed and the Government had immediately come to its rescue by undertaking a present or contingent liability to the Imperial Bank for losses consequent on the failure of the Alliance Bank. The Imperial Bank was to pay fifty per cent. of their money to the depositors straightaway. A section of the Indian public specially, who indignantly remembered the failure of Indian Banks in 1913 owing, they alleged, partly to the indifferent attitude of the Government of India and the Presidency Banks, now expressed the view that the Alliance Bank had been rescued because it was a European managed Bank. They were incensed that no Indian auditor had been associated in the examination of the accounts of the Bank. They proclaimed that the Government's transaction was illegal and *ultra vires*, and it had no business, to pledge the taxpayer's money in the interests of a private institute. Sir Sivaswami Iyer

tabled a resolution in the Assembly censuring the move of the Finance Department in helping the Alliance Bank in the manner stated. His chief argument was that the Government was not justified in taking the step at all as such false moves would land them in bankruptcy. He doubted whether there would have been such a universal failure of credit as Government alleged as the cause of its intervention. Two non-official members differed from the speaker and maintained the view that there should be no objection to Government intervention in industry and commerce at a time of financial stringency. The main official contention was that in truth no risk had been taken and that the intervention had been justified by the results. A panic and a general run on Banks had been avoided. One of the lessons of the crisis, it was argued, was that the Imperial Bank ought to be in a position to come to help in a situation of the sort created by the Alliance Bank failure. But obviously the majority of the House thought the other way and the motion of censure was carried. The next day, the Home Member, owing to the peculiar phrasing of Sir Sivaswami Aiyar's resolution, had to explain that the decision to help the Alliance Bank had been taken by the Government of India as whole, and not by the Finance Department alone.

Agriculture.

Though most of the legislators were from town and few from country, they showed, wherever possible, a fairly good interest in agriculture. Being a provincial subject, it did not engage that attention which it would otherwise have, regard being paid to the fact that nine-tenths of India depends on agriculture. The Upper House represented the cultivator better than the lower, as the former contained members from the landed aristocracy. The subject of rural reconstruction was broached in a characteristically weighty speech by Sardar Jogendra Singh in the Council of State on the 18th July. The resolution had for its object the organisation of agriculture and the formulation of an agricultural policy to include land revenue, village education, co-operative credit and other allied matters. Sir Jogendra Singh mainly contended that agriculture was being taxed being a chief source of revenue to the State, and relief to the ryot necessary. He emphasised that the progress of agriculture should be assessed from time to time, and improvements should be carried by the ryot being taught the benefits of co-operative credit and allied matters. Finally he asked for a committee to investigate the matter. Sir B. N. Sarma made a lengthy argumentative speech in which he maintained that if there had been one subject which had received the constant attention of the Government of India, it was agriculture and irrigation. He did not believe that the rate of land revenue was excessive. He further stated that much was being done to spread the co-operative movement in all its aspects. The technical argument was advanced that under the reforms scheme agriculture was a provincial subject which, however, the speaker followed up with the advice that no single committee could study the varying conditions of the seven and a half lakhs of Indian villages, and it was up to the provincial Legis-

latures to undertake the agricultural reforms asked for. The resolution was easily defeated.

Previous to this, an occasion to vindicate the irrigation policy of Government and meet the popular fallacy that railways were as a rule given preference over irrigation, had been afforded to Sir B. N. Sarma when in the same place on January 30, the same non-official member complained in moving a resolution that funds be provided for irrigation projects on the same scale as for railways, and a proper expert board be constituted at the central headquarters to prevent delay in decision. The Government member not satisfied with the argument that irrigation was a provincial subject, went to give an assurance that the Central Government would do all it could to expedite schemes where under the rules its sanction was necessary; and the Financial Secretary also promised that Government would find funds to the utmost extent of its borrowing capacity for any well considered scheme of development, particularly of irrigation. The resolution was negatived.

Railway Management.

It caused no surprise when there was a very good attendance in the Assembly to watch and take part in the debate on the 27th February on the highly contentious subject of State vs. Company management. Every member seemed to have made up his mind to end the subject once for all, it for a time having been a handy animal. Indian and European opinion in the country was accurately reflected in the House, for the Europeans opposed State management on the plea that it had succeeded nowhere in the world, while the Indian standpoint was the whole railway policy of the Government of India had for years been directed in the interests of Great Britain and her manufacturers, and Indianisation of the service could not proceed under the present company management system. The view was also expressed that the railways should not be considered as a purely commercial proposition if in other respects they served national ends. They could do a good deal to develop indigenous industries by developing communications. The Government of India hardly required any argument to prove that the present system should go out, but they differed from the majority of the non-officials, as the division result showed, in one important particular. Mr. Innes, the Member for Commerce, accepted the amendment of Dr. Gour (the first being Mr. Neogy's which aimed at direct State management, as when the existing railway contracts with them expired) that on the expiration of the East India Railway contract (1924) and the G. I. P. Railway contract (1925) their management should be taken over by the State. He admitted the need of giving a trial to State management in a limited sphere and of utilising the experience thus gained before the other railways were acquired between 1928 and 1950. But he did not like to "bang the door" against any scheme of a well managed Indian domiciled company at a future date, and therefore he moved an amendment to Dr. Gour's "that efforts should be continued to concert measures with the object of handing over one or other of the two railways, after such grouping as may be.

necessary, to calculated to give India the benefits of 'real company management.' The non-official majority did not like this "absolutely obscure" scheme. At any rate, they desired that a fair trial should be given to State management, and they carried the day, Dr. Gour's views prevailing in the end.

The present system of Indian taxation offered a good subject for debate in the Council of State on the 23rd July, when Sir M. Dadabhoj moved an inquiry be made into it with a view to its thorough revision "on an economic, scientific and equitable basis, with special regard to the taxable capacity of the people." He characterised the growth of the Indian system of taxation as haphazard. While capable of being expanded in certain ways, he at the same time insisted on the removal of several duties which hindered industrial development. Sir Purshottamdas Thakurdas called the resolution inopportune. Mr. Lalubhai Samaldas held it was not advisable and not practicable. Mr. McWaters on behalf of Government was willing to accept the resolution, in supporting which he laid stress on the need for finding money for the national services, and referred the change in the fiscal policy from revenue to protectionist. Further consideration of the resolution was postponed till the replies stated by Mr. McWaters to have been asked for from the Local Governments had been received and were circulated to the members of the Council.

Indians Overseas.

India has a long time been the chief supplier of manual labour to several British colonies in the East. Coolies have gone out at one time under an indenture, and at another time as free men. There were no doubt many cases in which it was agreed that better treatment should have been accorded to them. As the self-respect of the nation grew within its borders, it was inevitable that the Indian people should also seek to protect the dignity and economic interests of the nationals abroad. Of all such colonies that attracted the attention of the Assembly during the year 1923, the most persistent was Kenya. Almost every time it put in its appearance in the anxious questions of the members. The year started under a cloud. Elections were impending in Kenya to the local Legislative Council. The Indian residents strongly expressed the view that they could not take part in them until the nature of the franchise whether it was a communal or common—they insisted on the latter—was settled. The European residents, so it went, had threatened violence if the claim of Indians were conceded. Indian feeling ran high at this, and was given expression to in the Assembly through the medium of questions put by Mr. T. V. Seshagiri Iyer, leader of the Democratic Party. The Government of India undertook to do all that could be done to prevent any mishap. The general elections in Kenya were accordingly for the time being postponed.

A debate was conducted in a tone of studied moderation in the Council of State on the 5th March on the same subject. Mr. Srinivasa Sastri moved a resolution that the view of the Council should be conveyed to His Majesty's Government by telegram, "that no settlement

regarding the political rights and status of settlers in the Crown Colony of Kenya would satisfy the people of India unless the Indians in Kenya were granted full and equal rights of citizenship with the European settlers." The resolution also protested indignantly against the reported threats of violence on the part of the Europeans and hoped effective steps would be taken to prevent any such outbreak and necessary protection would be afforded. Finally it recorded the emphatic conviction of the Council that no restrictions on new immigration from India would be acceptable to public opinion in India. The Revenue Member accepted the resolution and said negotiations were still proceeding on the subject of Indian franchise in Kenya.

Ominous Reports.

By the beginning of July, ominous reports began pouring in from England, where three deputations, one from India led by Mr. Sastri, and two from Kenya, one of the European settlers and the other of the Indian residents were at work going about the India Office and the Colonial Office discussing the Kenya question. Constantly plied with telegrams from London that the Indian case was in danger, the Assembly was having very anxious moments. A resolution was therefore moved on the 21st July by Mr. Seshagiri Iyer, with the help of Government who specially set apart a day for it, which ran as follows:—"That this Assembly being in full accord with the claims advanced by the Indian residents in Kenya in respect of franchise, immigration, segregation, and the Uplands and similar matters, recommends the Governor-General in Council to be pleased to move the Home Government to concede those claims." A large number of Indian members took part in the debate. They said the Empire was in danger if Indians in Kenya were to be treated as outcasts, hoped justice would prevail and not the narrow considerations of race and colour, and wished that a long view would be taken of the whole matter. Some talked of taking retaliatory measures, which were deprecated by others.

Just a few days before its dissolution and after a few days of the unanimous acceptance of this resolution, came the news of the decision by the British Cabinet. The Indian case, it was held here, had been lost on the major issues of franchise and the Uplands. Indignation rose to a pitch, which was reflected in the Assembly passing on the 27th July the Reciprocity Bill of Dr. Gour in less than five hours. The Bill was aimed against the inhabitants of the Colonies which discriminated against Indians. Government attempted to get it circulated, but they failed. But they succeeded to the extent of making its original mandatory character changed into permissive. Several other material alterations were made.

Motion for Adjournment:

A motion of adjournment was moved in the Council of State on the 27th July to discuss the Kenya decision. The mover, Sir M. Dadabhoj, said the Indian cause had been lost on almost all the important points, and desired the Government of India to convey to the Imperial Government their deep sorrow and profound disappointment at the decision. Stout support was lent

to the mover by many Indian speakers. The member in charge of the subject, while identifying the Government with the country in its disappointment and sorrow, held that there was still no ground for alarm or pessimism, and hoped that immigration into Kenya would not be directed against Indians in particular. Here the curtain was rung for the year on the unfortunate subject.

Indian labour being required in Ceylon and Malay States and Mauritius, the Government, under certain conditions, proposed to facilitate emigration. Two resolutions were accordingly moved and passed in both Houses. Several amendments of non-officials to alter the conditions in the contracts proposed were not accepted, while a motion to appoint a committee of inquiry to measure the effect of fresh Indian immigration on the condition of Indians already settled in Mauritius was withdrawn after Government's assurance that they would look into the matter.

Pressure on League of Nations.

On 12th July Sir D. P. Sarvadhikary called the Assembly to accept in resolution recommending the appointment of a committee with a non-official majority "to consider the question of continuing the existing financial and other support by the Government of India to the League of Nations, specially in the light of the grievances of Indians in the Mandated Territories of Tanganyika and the ex-German Islands of the Pacific Ocean." Frankly did the member for Calcutta confess that his object was to put Imperial pressure and the pressure of the League of Nations on the offending units in order to secure justice for Indians. But the opposition became general in the non-official benches and the remedy was held worse than the disease. Sir B. N. Sarma stated that the Government of India were busy making representations on subjects similar to those maintained in the resolution, which was withdrawn.

Political Offenders.

The release of political offenders who had recently courted jail figures a good deal in the questions and debates of the legislature, specially in their latter days. After his resolution "that early steps be taken to amend the electoral laws so as to enable a member of the Council of State to seek election to other legislative bodies constituted under the Government of India Act of 1919" was withdrawn on the 12th March, two days later Mr. Syed Raza Ali moved in the same place that the electoral rule laid down that a person convicted of a "political offence involving a sentence of six months was ineligible for election to any legislative body be modified". Non-official opinion was divided on the subject, while Government opposed it as a gratuitous concession to unwilling persons who had no respect for the legislatures. It was, however, announced that the question of making more elastic the rules relating to the removal of disqualifications arising out of criminal convictions on a comprehensive basis without any reference to particular categories was engaging the attention of Government.

An attempt was made on the 11th July by the Democratic Party of the Assembly through its President Mr. Seshagiri Iyer, to raise the question of the release of political prisoners:

He moved "that at an early date Mr. Gandhi, Hasrat Mohani and Mr. Mahomed Ali and others who were convicted at the Karachi trial, be released." Conciliatory methods, said Mr. Aiyar, would pacify the situation aroused by the arrest and incarcerations of the Non-cooperation leaders, specially that of Mr. Gandhi, whom he called "a great asset in favour of peace and tranquillity, law and order". Sir Malcolm Hailey, in opposing the resolution, denied that Mr. Gandhi's release would ever make for peace, or it would be in the interests of the country. He was still a danger. The Home Member described the All Brothers as advocates of violence. He concluded by saying that the present situation did not justify the step proposed. On the point of the release of Lala Lajpatrai, which was subsequently added to the resolution he said it was a purely local question. The words "Maulana Mahomed Ali and others" were omitted in the resolution by an amendment. The resolution itself was defeated after a fairly full debate.

Miscellaneous Subjects.

The subject of stopping traffic in women and children raised a gentle-heat-wave at the Delhi session of the Assembly when Government succeeded in carrying a motion, the object of which was to get re-considered by the local Governments and the public amendments which had been made by the Assembly in sections 362 and 368 of the Indian Penal Code by which the age of consent was raised from 16 to 18. Government were warned not to go against public opinion on a delicate social subject like the one under consideration.

The ever-green of Indian politics, reservation of compartments in railways for Europeans and Anglo-Indians, once again appeared on the 10th March when a member from Sind moved for its abolition. On behalf of the Railways it was submitted that the question, little as it was, should not be made a racial one, and it hoped time would set everything right. The motion was withdrawn.

On the undertaking of Mr. Hindley, the representative of the Railway Board, that the effect of the last increase in third class passenger fares would be carefully watched and the Railway administration would be advised to reduce them if experience showed that they were greater than the traffic could bear, a resolution that on all State railways return tickets for first, second and inter. class passengers be issued at a fare and a third during the Pusa, Christmas and Easter holidays and fares for third class passengers be reduced by one-fourth immediately, was withdrawn.

The minor administration of Ajmere-Merwar figured in the Council of State on the 21st February when Mr. Syed Raza Ali demanded by a resolution that if there was no scope for the realisation of the political aspirations of the people of that tract under the present administration, it should be amalgamated with the United Provinces or any major province. At any rate, the Hon'ble member wanted an inquiry. The Government of India announced that the U. P. Government were not willing to have the area under them and further consideration was proceeding. The subject was dropped.

Legislative Work.

No one can accuse the last Legislative Assembly and the Council of State of want of patience, industry and capacity with regard to legislative work. Containing a strong legal element, the Legislature always interested itself in the reform of the law in all its aspects, political, social and economic and general. In the Delhi session, 24 Bills were passed, and in the Simla session 19; 29 Bills were pending before the Legislature when the Delhi session closed and when the Simla session closed. But for the very very large time that that monumental piece of legislation, the Criminal Law Amendment Act took up, some of the Bills finally pending would have been disposed of.

In the domain of law proper, the important Acts passed were:—The Malabar (Completion of Trials) Act, the Repealing and Amending Act, the Indian Official Secrets Act, the Indian Penal Code (Amendment) Act, the Code of Criminal Procedure Amendment Act, and the Land Acquisition (Amendment) Act.

In the domain of general (official) legislation the following Acts were passed:—The Indian Lunacy Act, the Indian Bellers Act, the Indian Ports (Amendment) Act, the Cantonments (House Accommodation) Amendment Act, the Indian Naval Amendment Act, the Prisoners Amendment Act, the Indian Territorial and Auxiliary Forces (Amendment) Act, the Indian Army (Amendment) Act, the Indian Electricity (Amendment) Act, and the Code of Civil Procedure (Amendment) Act.

In the domain of financial legislation, the laws passed were:—The Cotton Transport Act, the Indian Paper Currency Acts, The Indian Cotton Cess Act, the Indian Income-tax (Amendment) Acts, the Government Savings Banks (Amendment) Act, the Indian Merchants Shipping Act, the Indigo Cess (Repealing) Act, and the Annual Finance Act (Budget).

In the domain of social legislation, the laws enacted were:—The Criminal Tribes Act, the Indian Mines Act, the Workmen's Compensation Act, the Married Women's Property (Amendment) Act, the Special Marriage (Amendment) Act, the Kutchi Memons (Amendment) Act, the Charitable and Religious Trust (Amendment) Act, the Mussalman Waki Act, the Legal Practitioners (Women) Act, and the Code of Civil Procedure (Amendment) Act.

It should be remembered that in all these domains several Bills were introduced which were rejected by the Houses, and which, however, should be remembered along with the Acts that were passed in estimating the work of legislation done by them.

Criminal Law Amendment.

Only a brief survey is possible of all this work. The *Magnum opus* of the Legislature was undoubtedly the Criminal Procedure Code (Amendment) Act. After a long and searching debate in which the proposal to postpone the consideration of the Bill, as it had been passed by the Council of State in September 1922, on various grounds, it was taken in hand and dragged its weary length into March. Several clauses evoked strong opposition and many amendments were made. The officials oppose

them whenever they thought the interests of justice would be in peril if they were accepted; the non-officials while expressing the same views aimed at reducing the 'zoolium' of the police. The recent abuse of certain section of the Code for political purposes such as 108 and 44 Cr. P.C. encouraged the non-officials to put forward several restrictive changes, which, however, did not succeed. The Assembly made quite a number of amendments to the Bill as passed by the Council of State of which all were accepted by the Council when the Bill was referred back to it except four. These four were finally accepted by that body before the Bill was passed into Law.

It took nearly a decade to have the Criminal Procedure Code amended and the work engaged the minds of some of the best judicial and legal elements of the country. While the changes in individual sections like 162, 195 and 406 require attention, the Code on the whole was considerably improved.

Racial Distinctions Act.

The next Act in importance was what popularly is known as the Racial Distinctions Act (the Criminal Law Amendment Act), which ought to put an end to several claims which Indian public opinion thought Europeans in India had enjoyed to the detriment of the interests of justice. It was essentially a piece of compromise legislation and proceeded to level up the Indian to the special position of the European while it also reduced or abolished some of the latter's privileges. Under the new law, Indian magistrates (first class) can try Europeans and *vice versa*. The death penalty can be imposed on an European by a Sessions Court. In a jury case involving racial considerations, the accused can claim a majority of his own countrymen to be empanelled, and an appeal lies to the High Court. Provisions are added by which the right of *Habeas Corpus* is extended to all persons including Indians. The Assembly succeeded in providing appeals against sentences of whipping. But for the fear of the Bill being wrecked, the Assembly had to accept two reservations made by the Secretary of State in the Racial Distinctions Committee's Report (on which the Bill was based) in respect of the definition of a "European British subject" so as to include the Colonials, and a provision to the effect that in the case of persons subject to the Naval Discipline Act, the Army Act or the Air Force Act, when accused of certain offences, the Advocate General would be bound, if instructed by a competent authority to move the High Court for the transfer of the case to that Court and that Court would thereupon be bound to do so.

Lala Girdharlal Agarwala's Bill to repeal the Criminal Law Amendment Act was intended to do away with the "repressive" legislation that was still remaining on the Statute Book. He contended that the Act was no longer necessary and has recently been abused by having been applied to Congress Volunteer Associations, whose creed was non-violence. Sir Malcolm Hailey contended that blood-thirsty anarchists were still alive in India and the Executive could not afford to forego extraordinary powers on certain occasions. Permission to introduce the Bill was refused.

Creation of Indian Bar.

Mr. Rangachariar met with a different verdict from the Assembly when he moved a Bill for the creation of an Indian Bar and the abolition of distinctions between various branches of the profession. The Government of India, in view of the many considerations involved in it, allowed the Bill to be introduced without opposition and consented to appoint an authoritative Committee, which has since been enquiring into the matter.

The Code of Civil Procedure Amendment Bill was passed (Section 60) by which the limits within which the salary or allowance of public officers and servants of railway companies and local authorities while on duty are protected from attachment in execution of decrees raised.

The privilege of objecting to the proposed acquisition of a land for a public purpose before it is finally decided upon is granted to the owner by the Government's amendment to the Land Acquisition Act.

Mr. Seshagiri Iyer's Bills to amend the Hindu Law so as to include certain classes of heirs hitherto excluded from inheritance under the Hindu Law and to alter the order of succession under the Hindu Law in favour of certain classes of heirs in certain parts of the country were postponed for further consideration.

The first Assembly and the first Council of State will be remembered for the charter of social and economic justice which they legislated for the manual labourer. The Workmen's Compensation Act, which is to come into force from July 1924, lays down for the first time in India the principle that workmen should receive compensation for injuries suffered from accidents arising out of and in the course of their employment. It applies to workers in factories and mines, railways and trams, certain classes of seamen and builders, dock labourers, telegraph and telephone linemen, underground sewage workers, men of fire brigade, etc. The exception is persons who receive more than Rs. 300 unless they are manual or railway workers. There are such conditions as drunkenness, negligence, etc., which disqualify an injured person from compensation. The Act is graduated to apply to cases of death, permanent injury but not death, and loss of earning capacity. It is framed as to reduce the scope of litigation as it provides for the administration and settlement of disputes by special commissioners. The Act is in no way comprehensive, but as a beginning it is considered by public opinion a great step in advance.

Progressive prohibition of child work in mines is laid down by the Mines Act, and it will be amplified when conditions permit, to extend to women. The hours of labour have been reduced to 60 hours above ground and to 54 hours below per week.

Another Act aims at the suppression of traffic in women and children. It may be stated in this connection that the Bill of Dr. Gour to raise the age of consent in case of rape (Indian Penal Code) was rejected by the Assembly on introduction.

Married Women's Property.

The improvement of the position of women engaged the attention of the Legislature a good deal. A Bill was passed into law by which the Married Women's Property Act was so amended as to provide that a policy of insurance expressed on the face of it to be for the benefit of the wife or the wife and children of the insurer shall automatically become a trust for their benefit. By the amendment of the Legal Practitioners Act, women are enabled to practice in law courts when properly qualified. Dr. Gour's Bill to amend the code of Civil Procedure in such a manner as to abolish imprisonment in the civil jail as a method of enforcing decrees for the restitution of conjugal rights was passed into law.

Dr. Gour has also linked his name with a famous measure, the Special Marriage Amendment Bill, which enables persons professing the Hindu, Buddhist, Sikh or Jain religion to marry under the Special Marriage Act of 1872 without being forced to declare that they do not profess those religions respectively, and applies the provisions of the Indian Succession Act to the property of such persons and their issues. In its final form the Act was a compromise one.

The Hindu Ceremonials Emoluments Bill, the object of which was to remove the obligation to pay fees to a hereditary priest, which is enforced in several parts of India, whether his services are required or not, was passed by the Assembly but thrown out by the Council on the plea that in destroying vested rights, it did not provide compensation.

Dr. Gour withdrew his Adoption Registration Bill. His motion to refer the Hindu Coparcener's Liability Bill to a select committee did not succeed.

The only piece of Muslim Legislation for the year was the Mussalman Waki Act by which, in the provinces in which it is applied, the Muttawallis of all Wakis are compelled to furnish within a specified time full particulars relating to the trust and to subject the accounts of the trust to an annual audit by qualified accountants.

The Bill of general human interest was the abolition of Transportation, which was abruptly dropped with a view to further discussion. It is intended that the Bill should be widened to imbricate the spirit of modern penology.

The Cantonments Bills aiming at the liberalisation of the administration of these areas could not be handled by the Council of State after its passage in the Lower House.

Two Bills of an entirely different class deserve mention. The Mahendra Pratab Singh Estates Act, which provides for the forfeiture of the estates and other property of Mahendra Pratab, a revolutionary now outside India, and for their grant, subject to conditions, to his son, is the first Act of Attainder passed by the Indian Legislature.

The Immigration into India Bill (the Reciprocity Bill referred to under Indians Overseas—Kenya), was passed in that haste at one sitting of the Assembly on the heels of the Kenya decision. It attempts to regulate the

entry into and residence in British India of persons in other British possessions, who shall have no more rights and privileges in India than Indians in those respective countries. It has still to win the approval of the Upper House. The Financial legislation is dealt with under the head of Finance.

The Financial Conditions.

The year 1923-24 did not prove an exception to the statement of the late Lord Bryce that the chief difficulty of the Anglo-Indian administrator is finance. The anticipated deficit of nine crores had nearly doubled, revenue having fallen by 12½ crores as follows:—

Posts and Telegraphs	(.94 crores)
Customs	(3.12 crores)
Income-tax	(3.4 crores)
Railways	(5.86 crores)

This was the fifth year of deficit, the accumulated total being 100 crores. (The Provincial Governments, it may be remembered in this connection, were not doing better.) Thirty-one crores of the deficit had been covered by the operation of the printing press, thus starting the vicious circle of taxation by inflation. The remainder amounting to 69 crores had been raised by borrowing. Moreover to the extent of 22 crores the borrowing had taken the form of issues of Treasury Bills to the public, "which are an evil even in England where the money market is much more elastic than in India." The continued deficits were impairing India's credit abroad. As to the public debt, since 1914 the total had increased by 370 crores and the unproductive debt by 227 crores. Borrowing as an instrument of relief could no longer be safe or reliable. The only way out lay in the country meeting her expenditure, whether on capital or revenue account, out of her own savings.

In preparing the estimates for the next year 1923-24 these very grave considerations had to be taken into account. An expert had been brought out from the British Treasury, and Sir Basil Blackett promptly addressed himself to his task only to find himself astonished at what he called the Rake's Progress. Lord Inchcape, another famous expert, had also been brought out to weld the retrenchment "axe," and his committee's recommendations, before they published, were partly incorporated into the new Budget.

In his Financial Statement, the Finance Member, at the very beginning, ruled out the question of stabilising the currency as premature. He warned against a higher rate of exchange as making a considerable difference to interest charges on the sterling debt, and as in all likelihood involving a restriction of India's export trade and a readjustment of internal prices.

The total gross expenditure including the working expenses of the commercial departments he estimated to be 204½ crores or 11 crores less than in the previous Budget. The gross revenue was estimated at 198½ crores, leaving on the existing taxation, a deficit of 5.85 crores. In respect of ways and means, the total liabilities were estimated at 67 crores including the railway capital outlay of 3½ crores, loans to provincial Governments 1

crores, discharges on Treasury Bills 5½ crores, and of funded debt 5 crores. The loans next year were assumed for the estimates at £15 millions in sterling and 25 crores in rupees, though the exact method of effecting the remittance was not settled.

The Central Budget could not yet be balanced, though the total deficit of 5.85 crores had been reduced to 4.26 crores by crediting to revenue the interest on securities in the Paper Currency Reserve, which method was approved by the Assembly in 1922-23. While therefore the talk of provincial contributions being reduced for the present was not a practical proposition at all, new taxation became necessary to make up the uncovered deficit. It was not safe, said the Finance Member, to depend on any possible "cuts" being made on the basis of the Inchcape recommendations by the help of which a lump reduction of Rs. 40,27,000 had been made in the budget. Amidst cries of "No," "Never," the Finance Member next announced that the only practicable tax was the salt tax, which he proposed to double. It must be unpleasant, he concluded, but was preferable to recurring deficit and insolvency.

The usual discussion on the budget opened on the 5th and continued on the 6th March. The criticism of the military expenditure was only in severity exceeded by the criticism of the salt tax. The proposal was condemned as politically unwise and economically burdensome. A reduction in the amount of the tax was suggested by a few. A temporary surcharge of half an anna per rupee in respect of income-tax, super-tax and customs collections was suggested, also a four anna duty on silver and an export duty on petrol and jute, all of which were unacceptable to the Treasury Bench.

The military expenditure was considered too high, and it was urged there was still room for retrenchment. Introduction of Indians into all the branches of the Army on a cheaper scale was recommended. The present inequitable system of capitation grants was condemned, as also the policy of occupying Waziristan and civilising the Mahsuds. On the other hand, reduction in the passenger fares and stabilisation of the exchange were pressed.

His Excellency the Commander-in-Chief, in reply, said that large reductions had been made in the troops for economy's sake and he could not go further. He would not give any hope that military expenditure would be reduced to Rs. 50 crores, as the Inchcape Committee had desired. He endorsed the non-official view about capitation grants and held out hope that the financial commitments in Waziristan would be reduced.

Winding up the debate, Sir Basil Blackett examined and rejected all the alternative proposals, repeated that further cuts were impossible and asserted that the salt tax still held the field as economically the least harmful. He plainly disliked as mere easy manipulation the suggestion (made by Mr. Samarth) to transfer certain charges from revenue to capital expenditure; it would merely mean, he said, the piling up unproductive debt which had already grown to Rs. 224 crores.

The Council of State also discussed the Budget on the 7th March. The salt tax was again opposed here, among other things, as being conducive

to the reduction of the vitality of the poor people and their cattle. The alternative suggestions were made of capitalising the railway annuities, levying a duty on imported iron and steel, and a surcharge on gross shipping freights. Finally an expenditure control committee was suggested.

The demands for grants were proceeded with in the Assembly from the 12th to the 17th March. The nett revenue and the nett expenditure in the estimates as they stood at this stage were Rs. 1,26,61,71,000 and Rs. 1,30,87,92,000 respectively.

At the outset the Assembly reasserted its right to discuss, though not vote upon, non-votable items, which according to an announcement of the Home Member just then made, the Assembly could not touch. Nominal reductions were moved in several of the departments such as the Political Service and the Government of India Secretariat, to ascertain the policy of the Government with regard to the Indianisation of the Services.

The Assembly finally made the following reductions:—

	Rs.
Customs	4,00,000
Railways	50,00,000
Railways	1,14,90,000
Government Administration ..	5,10,000
Stamps	1
Miscellaneous	3,90,000
Total	1,76,10,001

The Governor-General had to certify and restore two items among these. At the instance of Mr. Samarth, the Assembly had carried the suggestion to transfer the sum of Rs. 1,14,00,000 under Railways from revenue to capital expenditure. As pointed out in the course of general discussion, Government looked askance at the soundness of the proceeding and it was restored to where it stood in the Budget as presented on the 1st March. The item under "Miscellaneous" related to the Public Services Commission. The debate for omitting this item, which was based on opposition to the appointment of the commission, was on the same lines as the previous debate. (See under Resolutions.) Thrown out by a very narrow majority, the item had to be restored by the Governor-General.

The Salt Tax Enhancement.

On the 19th March, Sir Basil Blackett presented the Finance Bill which embodied only one new proposal, namely, the doubled salt tax (Rs. 2-8 per maund). The deficit at that stage was calculated to be Rs. 3,68,83,099, considering the cuts made by the Assembly.

A long, strenuous debate followed on the proposed enhancement. An informal conference to secure a formula of agreement failed, and the official defence grew more warm in which the economic soundness of the tax was maintained. Three annas per head per annum was considered as the lightest of light burdens at a time of falling prices. There was no more room for retrenchment. To present a deficit Budget to the

world once again was not a thing worth contemplating. It would certainly impair India's credit and would raise India's interest payments on borrowings in and out of India. Finally the mild threat was held out that, if the tax were rejected, the Viceroy would be involved in a heavy responsibility for coming to a decision on a question of so momentous a nature. On the other hand, the opposition maintained that the salt tax was really burdensome. Politically, it would be unwise and prove a "messenger of revolution." Constitutionally it would be a retrograde step since the Legislature should be free to vote supplies as it liked. It was hinted that behind the proposal there was the dark design of standardising the expenditure at that year's level, the course of retrenchment automatically coming to an end.

An amendment to raise the tax to two rupees a maund in place of Rs. 2-8-0 as suggested by Government was rejected by 53 votes to 48, and finally Mr. Rangachariar's motion rejecting the proposed enhancement and maintaining the present rate (Rs. 1-4-0) was carried by 59 votes to 44. No chance was allowed for alternative proposals, among which was one by Sir Montagu Webb for drawing upon the Gold Standard Reserve, a proposal which the Finance Member condemned as the most unsound of unsound suggestions. The Finance Bill as amended by Mr. Rangachariar (rejecting the salt tax enhancement) was then carried.

On the 23rd March the Council of State restored the rejected item at the instance of the Government, but not before the objection was raised, chiefly by Sir Maneckji Dadabhai, that over money bills the Upper House should not be brought into conflict with the Lower which was the more popular.

On the 28th March, the gloom thickened when the Assembly was given an opportunity to reconsider its decision by the Finance Bill as amended by the Council being once more placed before it. "Balance the Budget," was the slogan of the Finance Member. The opponents argued and appealed. They said they could not separate the political from the financial aspects of the matter. Government were reminded of their previous promise that if any new impost were to be levied it would be by the mandate of the Assembly. What had happened to it now? Was the generosity of the Assembly in voting several crores of taxation in the two previous years to be rewarded with this sort of treatment? Were the allies of Government to be sacrificed to the interests of the non-co-operators? How were the Reforms successfully to work? Did not, really speaking, Whitehall press for the tax and Delhi simply obey? Was not the money to be got out of the salt tax to be spent on a more forward policy on the Frontier? Had all possibilities of alternative taxation been explored? Would India's credit be so badly affected as was represented if the Budget were left as it was? Was not the deficit after all an "office-made," paper deficit? All these and a number of other questions were asked, and all these were answered from the official benches. While denying that the Reforms would break down if the enhancement were decreed by certifi-

cation by the Viceroy, the Home Member contended that the powers of certification were not "kept for show, but for use."

The enhancement was again rejected by the Assembly by 58 votes against 47.

The salt tax at Rs. 2-8-0 as originally proposed was subsequently restored under the certification powers of the Governor-General, who issued a lengthy communique explaining his proceeding.

The Viceroy's action was debated in the House of Commons at a later stage, and was supported by Parliament.

Supplementary Grants.

The autumn session of the Legislature has not usually much financial work to do except passing the supplementary grants, though last year two Financial Bills were passed.

The Assembly first addressed itself to a formal task, that of regularising expenditure previously incurred in 1921-22 and it had little to offer by way of Government statement as the Public Accounts Committee of the House had already scrutinised the administration of funds; only it was desired that the appropriation reports should be fuller in details and be published earlier.

The excess grants as agreed to by the Assembly were:—Expenditure chargeable to revenue, Rs. 1,95,00,183 and disbursements of loans and advances, Rs. 2,98,32,976.

The supplementary grants were then taken up. The item of "opium" caused a heated debate. While Mr. Rangachariar opposed it on the plea of "Grievances before supply," Sir Doviprasad Sarvadilkar opposed the encouragement of cultivation even by an acre of opium on moral grounds. Government pleaded they were doing their very best to reduce poppy cultivation, and the Finance Member pleaded for a spirit of co-operation to work the Reforms, since an obstructive spirit would impede rather than accelerate the country's constitutional advance.

The motion was agreed to.

Financial Resolutions.

We may now turn to the financial resolutions and legislation of the year under review.

The lump sum contributions which the provinces have to pay to the Central Government are admittedly a drain on the resources, especially when they require large sums of money for the nation building departments; nor have the contributions been properly proportioned to the capacity of the provinces. Madras and the Punjab have a serious grievance in this respect while, out of sheer want of solvency, Bengal had to be excused payment of her share for three years. The Bombay Presidency's desire to have part of the proceeds of the income tax credited to her share has not been met.

The wiping out of the contributions being considered a necessary step in the process of the financial stability and the working of the reforms in the provinces, Mr. M. K. Reddi moved in the Assembly, on the 22nd February, that these contributions should be abolished in the course of six years. The Government opposed the resolution as inopportune coming as it did before the budget (March 1), and maintained that the Central Budget must be first balanced, for which all efforts were being made, and when their resources were declared sufficient, the present contributions could be withheld by the provinces. There was a clean division of opinion among the non-official members according to the provinces they represented; Madras and the Punjab went in for the resolution, Bengal and Bombay were against. The motion was for the present shelved by adjournment.

The Ackworth Committee in recommending the placing of Indian railways on a purely commercial basis had strongly emphasised the separation of railway from general finance. Government desired an open debate in the Assembly on this rather important subject, but that body, in view of several complicated issues involved in the subject, allowed postponement of the debate. It wanted to see the Financial Statement for the year and the Incheape Retrenchment Report before coming to a decision. One of the elements that played its part in this decision was undoubtedly the fear that if the finances of the railways, over which the tax-payer had lost a good deal in former years, were separated from the general finances, the latter would not be able to get anything from the railways just at a time when they were beginning to pay a dividend.

The maintenance of the stability of the Indian exchange was the subject of a resolution in the Council of State on July 16, when Sir Sirdar Jogendra Singh moved a resolution to make the pound sterling legal tender in India with Rs. 15 to the pound and abolish the theoretical legal tender of Rs. 10 to the pound. Among other reasons, the Finance Secretary urged that no exchange could pretend to permanence or stability in the very unsettled conditions of the world at present. The resolution was withdrawn.

The Council of State, on the 17th July, refused to follow in the footsteps of the Assembly to reduce the daily allowances to which the members were entitled on the ground of the Council's greater dignity and privileges.

Now as regards the financial legislation of the year. The Indian Stamp Amendment Act of July 1923 will be remembered for one feature of the discussion that arose on it. Mr. Rangachariar attempted to organise opposition on the sole ground of "Grievances before supply," that is, as a protest against the certification of the salt tax which had been rejected by the Assembly in the previous March. But the member gained few adherents to his creed of "non-co-operation," and the talk of refusing the Supplementary Budget, which had filled the air before the session met, vanished for good. As to the Bill, its object was to raise more

money for the provinces which were chiefly to benefit by the enhanced rate of duty on demand promissory notes. The new scale is one anna in the case of notes of a value not exceeding Rs. 250, two annas in the case of notes of a value exceeding Rs. 250 but not exceeding Rs. 1,000; and in other cases, four annas. Thus has disappeared a long existing anomaly of a flat rate of one anna for all promissory notes, be they of one rupee or of ten thousand rupees.

A Bill, at once popular and necessary, was

enacted in July by which the expansion and contraction of the Indian Paper Currency was sought to be made automatically coincident with the fluctuations of the export and import trade, *i.e.*, seasonal market. The Indian Paper Currency Amendment Act authorises the increase from five crores to twelve crores of rupees the amount of emergency currency which may be issued against bills of exchange. The Act is also expected to reduce the working costs of the mints by obviating the necessity of recoinage of withdrawn coin at a time when the stock of silver coin is large.

The Indian National Congress.

For a complete history of the movement represented by the Indian National Congress the reader is referred to earlier editions of The Indian Year Book. The Congress was founded in 1885 by Mr. Allan Octavian Hume, a retired member of the Indian Civil Service, and it held its first session in Bombay at Christmas of that year, the fundamental principles of the Congress were laid down to be:—

Firstly, the fusion into one national whole of all the different and discordant elements that constitute the population of India;

Secondly, the gradual regeneration, along all lines, mental, moral, social and political of the nation thus evolved; and

Thirdly the consolidation of union between England and India by securing the modification of such of the conditions as may be unjust or injurious to the latter country.

With these objects in view the Congress pursued an uneventful career until 1907. It undoubtedly exercised a great influence in inducing a spirit of national unity amongst the diverse peoples of India, in focussing the chief political grievances, and in providing a training ground for Indian politicians. But in 1907 the Extremists, chiefly of the Deccan and the Central Provinces, who had for some time chafed under the control of the older generation, succeeded

in wrecking the Surat session of the Congress and produced a split which had long been seen to be imminent. The senior members of the Congress therefore re-crystallised its creed in definite terms. They laid down that:—

"The objects of the Indian National Congress are the attainment by the people of India of a system of Government similar to that enjoyed by the self-governing members of the British Empire, and a participation by them in the rights and responsibilities of the Empire on equal terms with those members. These objects are to be achieved by constitutional means by bringing about a steady reform of the existing system of administration and by promoting national unity, fostering public spirit and developing and organising the intellectual, moral, economic and industrial resources of the country."

For some years following 1907 efforts were made to heal the split and these were without avail until 1916 when a re-united Congress met at Lucknow under the presidency of Babu Ambica Charan Muzumdar of Faridpur in Bengal. But the union then effected was purely superficial; the difference between the Moderates and the Extremists was fundamental; the Extremists captured the machinery of the Congress and from the period of the special session held at Calcutta in September 1920 the Congress passed entirely under the domination of Mr. Gandhi.

THE NON-CO-OPERATION MOVEMENT.

Liberals and Non-co-operators.—This line of cleavage came definitely into view when the new constitutional system under the Government of India Act of 1919 came into existence. The older Congressmen who had taken a considerable part in formulating the new constitution lent it their cordial support. The Congress did not. True, the Amritsar Congress, held in 1919, rendered lip service to the Reforms. While declaring the fitness of India for full responsible government, and the reforms as inadequate, unsatisfactory and disappointing, it declared its willingness to work them so as to attain the early attainment of full responsible government. But this mood did not last long. On the report of the Hunter Committee on the Punjab disturbances of 1919, Mr. Gandhi broke away from the principle of constitutional progress and at a special session of the Congress held at Calcutta in September 1920 launched his campaign of "progressive, non-violent non-co-operation." This decision was endorsed at the ordinary session of the Congress held at Nagpur at Christmas, where in addition the creed of the Congress was altered to make it "the attainment of swarajya by the people of India, by all legitimate and peaceful means," the omission of the qualification "within the British Empire" being deliberate. The non-co-operation campaign was actively prosecuted during the year 1921, and shortly before the holding of the usual Christmas session of the Congress the Committee issued a report in which they claimed large successes for it in the boy-

cott of schools, the collection of funds, and the stimulation of the use of khaddar or handspun and handwoven cloth (q. v., The Indian Year Book, 1922, pp. 689, 690). Before the Congress was actually held the active measures taken by the Governments of Bengal, the United Provinces and the Punjab against intimidation and lawlessness had led to the incarceration of many active non-co-operators. The actual session at Ahmedabad was therefore a one man show and that man Mr. Gandhi. The work of the Congress resolved itself into one resolution, re-affirming the Calcutta and Nagpur resolutions and appointing Mr. Gandhi dictator in the use of the machinery of Congress to carry them into effect. It was then announced that active civil disobedience would commence on January 21st, 1922.

Chauri-Chaura and Bardoli.—The first manifestations of civil disobedience appeared in some districts of the east coast of the Madras Presidency, where a campaign against the payment of Government dues speedily collapsed before the vigour of the local authorities. Mr. Gandhi himself went to the Bardoli Taluka of the Surat District, which was reported to be ripe for the campaign, to open it himself. But there Mr. Gandhi seems to have been stricken with doubts, for he sought to have the campaign postponed, but was vetoed by the mob he had wrought to the pitch of lawlessness. But before overt measures could be taken there occurred just such an episode as politically-minded people had known was in-

evitable in the conditions of India. At Chauri-Chaura, in the United Provinces, on February 4th, a mob of Congress "volunteers" and infuriated peasantry murdered twenty-one policemen and rural watchmen. This tragedy produced a wave of indignation throughout the country and opened the eyes of people to the certain end of the campaign of no law. His friends rushed to Mr. Gandhi and urged him to abandon the campaign. Either in deference to these appeals, or because he had become convinced of the impossibility of non-violent civil disobedience, Mr. Gandhi agreed and published as the fruit of a hasty meeting of the Working Committee of the Congress the recantation known as the Bardoli resolutions.

Briefly, the Bardoli Resolutions indefinitely suspended mass civil disobedience and advised Congress organisations (1) to enlist at least a crore of members for the Congress, (2) to popularise the spinning-wheel and the organisation and manufacture of hand-spun and hand-woven khaddar, (3) to organise national schools, (4) to organise the depressed classes for a better life, (5) to organise an effective temperance campaign, (6) to organise village and town panchayats, (7) to promote communal unity and (8) to collect money for the Tilak Swaraj Fund. Under the constitution, it was necessary that the Bardoli programme, as slightly modified by the Working Committee, should be submitted to the All-India Congress Committee and a special session was held at Delhi for that purpose. At this session it became more than ever apparent that the control of the movement had passed from the hands of Mr. Gandhi to the

more violent men who had used them and who, having nothing to lose and nothing at stake, had chafed at the talk of non-violence. It was decided that individual civil disobedience might be launched by Provincial Congress Committees and the picketing of foreign cloth shops and liquor shops was also sanctioned. Then followed Mr. Gandhi's arrest and trial for sedition. A sentence of six years' simple imprisonment was passed on him. Mr. Gandhi's removal from the scene produced a remarkable change in the country. A period of political peace supervened, and people began to ask themselves more closely whether the campaign of "no-law" would lead. With this changed mentality there was a strong revulsion against the negation of Mr. Gandhi's programme and a strong desire to enter the Councils. But pinned as the Congress was to the non-co-operation programme, it was not easy to resile therefrom. In June, therefore, the All-India Congress Committee appointed a Sub-Committee, generally known as the Civil Disobedience Committee, to enquire into the general situation and in particular to report whether Civil Disobedience in some form or some other measure of a similar character could be adopted. This Committee toured the country for six weeks and presented a report early in November 1922 unanimously holding that the country was not ready to undertake mass civil disobedience. They were sharply divided on the subject of seeking entry into the Councils, and this difference of opinion dominated the session of the Congress held during Christmas 1922 at Gaya, where under the leadership of Mr. C. R. Das the Swaraj Party was definitely formed.

THE CONGRESS IN 1923.

In earlier editions of the Indian Year Book, the gradual disruption of the Congress has been dealt with. The difference of opinion on the question of Council-entry completely dominated the session of the Congress held at Gaya during the Christmas week of 1922. It will be remembered that at that session a resolution reaffirming the programme of non-violent non-co-operation and the boycott of the Councils was passed by a majority vote. On the morrow of that decision, the dissentients headed by Mr. C. R. Das announced the formation of a party, within the Congress, to work for the non-co-operation programme from inside the Councils.

Attempts were subsequently made to bridge the differences and go back to the original non-co-operation programme. But these proved abortive. Ultimately, a special session of the Congress was summoned at Delhi in September 1923 mainly with a view to decide whether Congressmen as such should participate in the elections to the Assembly and the Provincial Councils which were then impending. Eleventh-hour efforts to achieve unity on the eve of this special session completely failed. Mr. C. R. Das, the leader of the pro-Council-entry Swaraj Party, conscious of the strength of his following, refused to yield any ground whatever. The die-hard non-co-operators led by Mr. Mahomed Ali, who had just then come out of jail, rather than definitely break with the Swarajists, agreed to a so-called compromise resolution. This resolution, while re-affirming the faith of the Congress in non-violent non-co-operation,

gave the liberty to those Congressmen who had no religious or other conscientious objection to stand for election to the Legislatures and exercise their right of voting at the then impending general election. After making it plain that all propaganda in furtherance of Council boycott was to be suspended, the resolution further urged Congressmen to redouble their efforts in carrying out the "Constructive Programme" with a view to attaining Swaraj at the earliest possible moment. This resolution was debated for over four hours at the open session of the Congress and was ultimately carried by a majority vote.

Civil Disobedience.

Having helped the Swaraj Party to gain their point, the leaders of the die-hard section of the Congress were anxious to do something to placate their following. They accordingly brought forward a resolution for the appointment of a Committee to organise an effective campaign of Civil Disobedience and to advise and regulate the action of the Provinces organising similar Provincial and local campaigns for the speedy attainment of Swaraj which alone, in their view, could guarantee the restoration of Mr. Gandhi and other political prisoners to liberty as well as the freedom of the Jazirat-ul-Arab and a satisfactory settlement of the Punjab "wrongs". This resolution was debated in the open Congress for close upon six hours. Speaker after speaker from the Punjab got up and swore that that Province at any rate

was not ready to undertake Civil Disobedience when the Hindus and Moslems were flying at each other's throats. The resolution was, however, carried by a majority, its supporters maintaining that the best way to achieve unity was through a strong common programme.

Boycott of British Goods.

The Special Congress then proceeded to consider another resolution calling for the boycott of British Empire goods as a protest against the Kenya decision. It was proposed to set up a small Committee with powers to co-opt to devise an effective scheme of boycott. After a debate lasting for a number of hours the resolution was carried by 640 votes to 221, the Bengal delegates numbering about 300 solidly voting in favour of it. The Congress next proceeded to consider a resolution recommended for acceptance by its executive in connection with the Kenya decisions, declaring that the people of India must seriously consider the advisability of working for the establishment of Swaraj independent of the British Empire. Taking part in the debate on this motion, Mr. Mahomed Ali made an explosive speech declaring that the passing of the resolution would be merely an exhibition of petulance and childishness and that the Congress would be making itself the laughing-stock of the world and contribute something to gaiety of nations. Mr. Mahomed Ali's plain-speaking secured recruits for Prof. Gidwani's amendment calling for an educative propaganda regarding the position of Indians in the Colonies and to help Kenya Indians in any practical programme. This amendment was ultimately carried by 264 to

207 votes and the recommendation of the executive of the Congress completely thrown overboard.

Hindu-Moslem Differences.

Next in importance to the question of Council-entry, what perhaps engaged most attention at the Delhi Special Congress was the question of Hindu-Moslem Differences. Both before and during the Congress, leaders of both the communities devoted many anxious hours in finding a solution to the problem, so much so that on occasions the ordinary delegates were kept waiting inside the pandal without any business being transacted, while discussions were in progress behind closed doors. After the Congress session had been prolonged by two or three days the resolutions, which ultimately emerged from the Hindu-Moslem Unity Committee after heated wrangling, were rushed through the session at the last minute with no explanation whatever. The resolutions neither sought to end the *Suddhi* Movement nor the counter-propagandism movement of the Mahomedans.

A Committee appointed.

The whole problem was shelved by the appointment of a Committee consisting of two Hindus, two Mahomedans, a Sikh and a Parsi to roam about Northern India and enquire on the spot into complaints of coercion, intimidation and undue influence in connection with the rival communal movements and to submit a report before December 15th. As things turned out this Committee did not begin its work at all; but Lala Lajpat Rai and Dr. Ansari produced a Hindu-Moslem National Pact which came up for consideration at the annual session of the Congress at Cocanada during Christmas 1923.

THE COCANADA CONGRESS.

Events moved fast after the special session of the Congress held at Delhi in September. The Swaraj Party, having at any rate secured the benevolent neutrality of the die-hard section of the Congress, proceeded with their election campaigns in right earnest. Other Congress activities over-shadowed by the Council elections were practically at a standstill. While the Swarajist's election campaign and their attempt to oust the Liberals from the Assembly as well as the Provincial Councils provoked a good deal of interest, few Congressmen of the die-hard variety appeared to be actively engaged in their own "Constructive Programme." A kind of paralysis seemed to have overtaken the die-hard section of the Congress. Notwithstanding the fact that they were fighting against time, the Swarajists stumped many parts of the country with their cry of obstruction from inside the Councils. They met with unexpected success in the Central Provinces and in Bengal. Meantime, the Hindu-Moslem relations in Northern India were steadily worsening. As the date for the Cocanada Congress approached, the two real issues that were exercising the minds of Congressmen were whether the Swaraj Party ought to get a mandate from the Congress to carry on their programme of obstruction inside the Councils or not, and whether any real solution was possible in connection with the Hindu-Moslem question.

Mr. Das with a view to consolidate his position at Cocanada and enlist Mahomedan sympathy for his programme entered into a compact with certain Mahomedan leaders of Bengal, whereby the Mahomedan community were promised very generous concessions at the expense of Hindus when India obtained Swaraj. This so-called Bengal Pact came as a bomb-shell and precipitated the publication of the Lajpatrai-Ansari Draft Pact which was to have come up for consideration at Cocanada in the first instance.

Lajpatrai-Ansari Pact.

The following are the main provisions of the Lajpatrai-Ansari Pact:—Full religious liberty, that is, liberty of belief, worship, propaganda, association and education is hereby guaranteed to all the communities forming the Indian nation and shall form a constitutional right which it shall never be lawful for any government to annul, modify, suspend or otherwise interfere with. The aforementioned liberties shall, however, be exercised subject to such disciplinary rules and regulations as may be found necessary to preserve peace and order and to eliminate force or compulsion by one party in derogation of the rights of others.

To prevent any particular religious denomination being given undue preference over any other. No Government fund or funds collected by local bodies from public revenues and public

taxes including cesses shall be devoted to the promotion and furtherance of any denominational institutions or purposes.

When once Swaraj has been achieved it shall be the sacred duty of every Indian, be he Hindu, Mussalman, Sikh, Parsi, Christian or any other denomination to defend it against all attack, external or internal.

In view of the present state of feeling prevailing in the different communities and in view of the insufficient development of political sense and responsibility in them, it is necessary, for sometime, to afford adequate protection to the interests of minorities. It is therefore hereby agreed that the various communities shall have separate representation in the legislatures both state and federal. There shall be no communal or colour or caste distinction in public services and in educational institutions.

Cow Slaughter.

In order to achieve national unity and out of regard for the religious feelings of their Hindu compatriots, the Mussalmans of India do hereby by a solemn self-denying ordinance bind themselves to give up cow slaughter except in connection with Idazha, when it will be done in such a manner as will not injure the feelings of Hindus.

In order to secure and preserve a calm atmosphere for public worship it is hereby declared that no music shall be allowed in front of places of public worship at such time as may be fixed by local mixed conciliatory boards.

Religious processions of different denominations, when falling on one and the same date, shall follow such different routes or be fixed for such different times as may be determined by local mixed conciliatory boards.

In order to prevent friction and settle all questions giving rise to differences and conflicts between different religious communities, e.g. on the occasion of Dussera, Mohurram, Rath Jatra procession, Sikh Diwans, etc., provincial and joint boards will be appointed to act as conciliatory and arbitration boards.

Compromise re-affirmed.

The Cocanada Congress met in an atmosphere surcharged with suspicion and intrigue under the presidentship of Mr. Mahomed Ali, who had had just under four months of freedom after his release from gaol. Many delegates thought that while Mr. Mahomed Ali played for safety at Delhi by forcing the "compromise" regarding Council-entry on the die-hards, he would give an open lead at Cocanada against the Swarajists. Such, however, was not the case. In the course of the lengthiest address ever delivered by a Congress President, Mr. Mahomed Ali recommended the re-affirmation of the "compromise". This was done by a majority vote after a good deal of manoeuvring and wrangling.

In regard to the Hindu-Moslem problem there was some heated discussion. Mr. Dacome came in for a good deal of abuse for entering into a separate pact for his own Province. Ultimately, the question was again shelved by remitting the All-India Draft Pact to the Lajpatrai-Ansari Committee with instructions

to call for further opinion and criticisms on the draft and submit a fresh report by 31st March 1924.

Text of Main Resolutions.

The following is the text of the main resolutions passed by the annual session of the Congress at Cocanada in December 1923.—

HINDU-MOSLEM PACT.

"Resolved that the Committee appointed by the Delhi session of the Congress do call for further opinion on the draft of and criticisms on the Indian National Pact and submit for further report by the 31st March 1924 to the All-India Congress Committee for its consideration and Sardar Anarsingh of Jhabbal be included in the place of Sardar Mehtab Singh who is now in Jail."

COMPROMISE.

This Congress re-affirms the Non-co-operation resolutions adopted at Calcutta, Nagpur, Ahmedabad, Gaya and Delhi. Since doubts have been raised by reason of the Non-co-operation resolution adopted at Delhi with regard to Council-entry, whether there has been any change in the policy of the Congress regarding the triple boycott, this Congress affirms that the principle and policy of that boycott remain unaltered. This Congress further declares that the said principle and policy form the foundation of the Constructive Work, and appeals to the nation to carry out the programme of Constructive Work as adopted at Bardoli and prepare for the adoption of Civil Disobedience. This Congress calls upon every Provincial Congress Committee to take immediate steps in this behalf with a view to the speedy attainment of our goal."

VOLUNTEER ORGANISATION.

This Congress is of opinion that in order to train the people of India and make them effective instruments for the carrying out of National Work on the lines laid down by the Congress, it is necessary to have a trained and disciplined body of workers, under the control and supervision of the All-India Congress Committee except as regards its internal management. This Congress, therefore, welcomes the formation of an All-India Volunteer Organisation and accords it its full support.

KENYA.

"This Congress sends the greetings and sympathy of the Nation to the Indian community in Kenya and while adhering to the opinion that unless Swarajya is won for India, the sufferings and grievances of Indians abroad cannot be properly remedied, it authorises Mrs. Sarojini Naidu and Mr. George Joseph to attend the forthcoming Indian Congress in Kenya and study the situation and advise the Indian community there, as to what steps they should take in carrying on their struggle against the insults and injustices imposed upon them."

INDIANS ABROAD.

"In view of the humiliating treatment accorded to Indian labourers in various parts of the British Empire, this Congress advises the people of India to consider the question of stopping all kinds of emigration from India for labour purposes and

calls upon the Working Committee to appoint a small Committee to examine the matter in all aspects and report to the All India Congress Committee."

AKALI STRUGGLE.

"This Congress declares that the attack made by the Government on the Shriomani Gurudwara Prabandhak Committee and the Akali Dal is a direct challenge to the right of free association of all Indians for non-violent activities, and being convinced that the blow is aimed at all movements for freedom, resolves to stand by the Sikhs and calls upon Hindus, Mussalmans,

Christians, Parsis and all peoples of India to render all possible assistance to the Sikhs in the present struggle, including assistance with men and money. The Congress authorises the All-India Congress Committee to take necessary steps in this behalf."

SATYAGRAHA COMMITTEE.

"Resolved that this Congress authorises the Working Committee of the All-India Congress Committee to perform the duties of the Civil Disobedience Committee appointed at the Delhi session of the Congress, and further resolved that the Satyagraha Committee do henceforward cease to exist as a Separate Committee."

All-India Liberal Federation.

The definite breach between the two wings of the old Congress party inevitably led to the formation of an organisation which embraces the older school of thought, formerly called Moderates and now known by the name of Liberals. This organisation was created in the name of the All-India Liberal Federation which holds its annual session about the same time but at a place different from that of the Congress. The Liberal Federation met at Poona in December 1923 under the presidency of Sir Tej Bahadur Sapru, who had returned from England a few weeks earlier after taking part in the deliberations of the Imperial Conference. In the course of his presidential address Sir Tej Bahadur Sapru referred to the Kenya question and said that as a result of the deliberations of the Imperial Conference the position of Indians in the Colonies was distinctly stronger and the prospects more hopeful. "Apart from our having gained," said Sir Tej Bahadur Sapru, "an unequivocal expression of good-will towards our aspirations from the other members of the British Commonwealth—excluding South Africa—a very important constitutional advance has been secured, namely, the right of the Government of India to negotiate with the Colonial Office through men appointed by itself for this and no less is what is explicitly provided for in the formula. Lastly, we have again succeeded in isolating South Africa. You will perhaps ask me what guarantee there is that the Kenya Committees will succeed in gaining any solid or substantial results. My answer to such a question would be this: If the men you send are strong and reasonable they should be able to achieve something substantial, more particularly because the Government in England appreciate now the depth and strength of the feeling on this question. And for aught we know to the contrary we may have at no distant date a more favourable Government."

After denouncing the attitude of General Smuts at the Imperial Conference, Sir Tej Bahadur argued at some length for a further constitutional advance and emphasised the need for the reorganisation of the Liberal Party.

The Federation subsequently passed a resolution urging for the immediate release of the Government of India and the local Governments from the trammels of the Secretary of State and demanding provincial autonomy and complete responsibility in the Central Government except in the Military, Political and Foreign Departments. The resolution also asked for the early appointment of the Statutory Commission.

Indians Overseas.

Another resolution which dealt with the position of Indians overseas passed by the Federation ran as follows:—

(1) This meeting of the All-India Liberals places on record its indignation and resentment at the Kenya decision of July last, which, besides, being grossly unjust and invidious, violates the most solemn pledges of the Crown and other constituted authorities, and its firm determination, which is likewise the determination of the whole of India, never to accept any settlement which assigns to their countrymen in Crown Colonies, particularly Kenya, a status in any way inferior to that of any other class of His Majesty's subjects. This meeting trusts that the committee to be appointed by the Government of India in pursuance of the resolution of the last Imperial Conference will be able to secure for Indians in Kenya a position in keeping with her recognised status as an equal partner in the British Commonwealth besides safeguarding in an effective manner their economic interests,

(2) This meeting further views with alarm the tendency of the provisions of the Kenya Immigration Bill, and requests the Government of India notwithstanding the unfavourable attitude of the Secretary of State for the Colonies, to press upon him the necessity in ordinary good faith of delaying the progress of the Bill through the Kenya Legislature until the committee above mentioned should have had opportunities of examining the measure and discussing its provisions with the Colonial Office. This meeting is further of the opinion that the Government of India should without delay appoint a strong and representative committee and send it to England at the earliest possible date to raise the question with regard to the Kenya Immigration Bill with the Colonial Office.

Retaliation against South Africa.

(3) In view of the facts that the political, civic and economic interests of Indians in South Africa have been for generations without adequate protection, that at the present moment their economic status is further threatened by the imposition of restraints which are humiliating to this country as well as injurious to their interests and that the position of Indians within the Union of South Africa excepting Cape Colony has during many years been inconsistent with their status as subjects of a common Sovereign and with the national dignity of India, this meeting of the All-India Liberals strongly urges the Government of India and the Secretary of State to take effective retaliatory measures against the Govern-

ment of that Dominion, whose representative refused even at the last Imperial Conference to explore any avenue for the redress of the grievances of Indians, great numbers of whom were born in that country and own it as theirs; in particular, this meeting recommends the imposition on non-Indian South African Colonials of reciprocal restrictions and disabilities in respect of the franchise, both political and municipal, eligibility for the public services and the right to hold properties and trade, mining and navigation licenses.

(4) This meeting strongly urges (1) an amendment of the Racial Distinctions Removal Act so as to deprive non-Indian South African Colonies in India of the special privileges still accorded to them in criminal trials, and (2) the imposition of a prohibitive import duty on South African coal, taking care at the same time by suitable measures to provide adequate facilities to Indian coal in the way of transport and otherwise.

Mr. Sastri's resolution urging India's withdrawal from the Empire Exhibition was withdrawn at the last moment, the President of the Liberal Federation declaring: "The Liberal Party as a party does not stand committed to a policy of boycott."

The work of the reorganisation of the Liberal Party was entrusted to a committee consisting of the Rt. Hon. V. S. Srinivasa Sastri (Chairman), Sir Tej Bahadur Sapru, Mr. C. Y. Chintamani, Dr. R. P. Paranjpye, Mr. Gokaran Misra and the Hon. Mr. Chitnavis.

The Moslem League.

The Indian Moslem League was established in 1906. Prior to that time the Indian Moslems had stood aloof from politics. Acting under the guidance of the greatest man they have produced, Sir Syed Ahmad, they devoted their attention to education, founding the Aligarh College with the special purpose of making up the leeway of Mahomedans in education, and left politics to the other Indian peoples. A few Mahomedans joined the National Congress and took part in its annual sessions; but the community as a whole stood aside from political movements.

In 1906 however changes occurred which impelled Indian Moslems to action. Under the Act of 1892, constituting the Indian Legislative Councils, there was no specific Moslem representation and in the elections which had taken place under that Act the Moslems had for all practical purposes failed to find selection. Therefore, when the amendment of the Act and the extension of the representative principle were under discussion, they were stirred to action. They feared lest, under an academic system, adapted only to a homogeneous people, their distinct communal interests would either secure no representation at all, or only inadequate representation. They therefore took counsel together and

approached the Viceroy in deputation, headed by His Highness the Aga Khan, and presented their views in an important State paper,

First Constitution.

It was felt that in view of the changed conditions the Moslems should organise their own political society for the expression of their communal policy. This was the origin of the Moslem League. The rules and regulations of the League provided for a constitution, with provincial branches, and defined the objects of the League in the following language:—

The objects of the League shall be—

(a) to promote among Indian Mussalmans feelings of loyalty towards the British Government, and to remove any misconception that may arise as to the intentions of Government with regard to any of its measures;

(b) to protect the political and other rights and interests of Indian Mussalmans and to place their needs and aspirations before the Government in temperate language;

(c) without prejudice to the objects mentioned under (a) and (b) of this section, to promote so far as possible concord and harmony between the Mussalmans and other communities of India.

Revised Constitution.

In 1912 and 1913 Moslem opinion as expressed by the League underwent a certain change. First at a meeting of the Council, afterwards at the annual session which was held at Lucknow, the constitution was amended so as to include in the objects of the League the attainment of a system of **self-government** in India under the Crown. The objects of the League, as defined, are thus set forth :—

The objects of the League shall be :—

(a) to maintain and promote among the people of this country feelings of loyalty towards the British Crown ;

(b) to protect and advance the political and other rights and interests of the Indian Mussalmans ;

(c) to promote friendship and union between the Mussalmans and other communities of India ;

(d) without detriment to the foregoing objects, attainment, under the aegis of the British Crown, of a system of self-government suitable

to India, through constitutional means, by bringing about, amongst others, a steady reform of the existing system of administration, by promoting national unity, by fostering public spirit among the people of India and by co-operating with other communities for the said purposes.

This change in the constitution of the League produced much discussion and was opposed by many of the older men who had led the community.

Merged in the Congress.—From the time of the Amritsar Congress the Moslem League lost its effective separate existence. It followed the Congress step by step in the change of its constitution and in the adoption of non-co-operation ; its annual session is only a pale reflection of the Congress, whose resolutions it accepts, with special emphasis on the Khilafat issue. Few of the leading Moslems of India take any part in its discussions, and those Moslems who are active in public life prefer to make their appearance at the Congress rather than at the nominal session of the League. The place of the League as the exponent of militant Moslem opinion has been taken by the Khilafat Committee.

The Khilafat Committee.

The Constitution and Rules of the Central Khilafat Committee are :—

(1) The Committee shall be named "The Central Khilafat Committee of India."

(2) The aims and objects of the Central Khilafat Committee are as follows :—

(a) To endeavour for the improvement and upkeep of the power and integrity of the Khilafat.

(b) To secure for Turkey a just and honourable peace and obtain a settlement of the Khilafat question, the Jazirat-ul-Arab and the Holy Places of Islam in strict accordance with the requirements of the Shariat.

(c) To secure by untiring and necessary efforts the fulfilment of the pledges given by the British Government in its notification, dated the 3rd November 1914, and by the Premier of England in his speech of the 5th January 1918 regarding immunity and safety of the holy places and Ottoman territories.

(3) With a view to secure the above subjects :—

(a) To carry on Khilafat propaganda both in India and in other countries.

(b) To create brotherly relations with the Muslims residing in other countries.

(c) To make the non-co-operation movement a success and to improve in this behalf national education, trades and industries. And to have mutual disputes settled through Panchayats.

(d) With a view to complete the above, to strengthen and improve unity and friendship between the Mussulmans and other races of India, to obtain Swaraj for India and to take such further steps as may be deemed necessary from time to time.

Constitution : (a) The Central Khilafat Committee of India shall consist of a president,

two vice-presidents, more than one secretaries, assistant secretaries, treasurers and members.

(b) The president and the Secretary of each provincial Khilafat Committee shall be considered to be the member of the Central Committee.

(5) Besides the office bearers of the Central Khilafat Committee, the president and a secretary of each provincial committee, the total number of the members for the Central Committee shall be 200. These members shall be elected from different provinces in following numbers : N.W.F. Provinces 5, Punjab 20, Agra Province 22, Oudh 8, Delhi, Ajmere and Merwara 10, Behar 12, Orissa 3, Bengal 20, Assam 5, C.P. 10, Berar 5, Burma 5, Bombay and Sind 55, Andhra 5, Madras and Bangalore 15.

The Session of 1923.—The Khilafat Conference session of 1923 was held at Coochabata at the same time as that of the Congress, with Mr. Shaikat Ali in the chair. The Conference congratulated Sultan Abdul Majid Khan III and expressed the hope that the cause of the Khilafat would be strengthened with his help.

Resolutions, appealing to Mussalmans in India to help the children and relatives of the Moplahs of Malabar who were involved in the rebellion, were passed.

The Conference emphasised that it was the religious duty of every Mahomedan to work for the freedom of India and to sacrifice every thing for the attainment of Swaraj and congratulated Hasrat Mohani on his conduct in gaol. The Conference emphasised the need for communal unity and referred both the All-India National Pact and the Bengal Pact to a Sub-Committee of its own for report. A resolution urging that the Jazirat-ul-Arab should be freed from foreign control and that Thrace should be returned to Turkey was passed.

Red Cross Work.

The Joint War Committee of the Order of St. John of Jerusalem and the British Red Cross Society, Indian Branch, came into being on 2nd August 1916 and has been responsible for the provision of almost the whole of the supplies of comforts for the sick and wounded ever since. Up to the end of 1917 its own resources had to be supplemented by grants from the Home Committee, but the generous response to the "Our Day" appeal made by all classes in India secured its financial position and for the past year it has not only been self-supporting but can regard the future without anxiety.

In the beginning of 1918 a scheme of re-organization of Red Cross work throughout India and Burma was adopted as the result of which each Province became practically autonomous as regards its own Red Cross work. The wants of Military hospitals situated within the boundaries of a Province became its own special care and were met by a Provincial Committee which administered Provincial Funds and organized Work Parties and other supplies. Provinces also were most generous in sending supplies of clothing and other comforts to the Bombay Depot. The General Committee thus relieved of the supervision of local work was enabled to concentrate its energies on co-ordinating Red Cross work throughout India, to take the measures necessary to avoid over-lapping, to exercise general control over the operations of the Bombay Depot, and to arrange for supplies required by Commissions overseas. The result of the re-organization proved most satisfactory.

Finances.—The operations of the Joint War Committee were brought to a close in June 1920. According to the final report, the total receipts of the committee amounted to Rs. 1,77,85,716. Of this Rs. 17,44,683 was received from the Home Committee; of the collections on "Our Day" 8½ lakhs were credited to the Central Committee donations to the Committee, interest, Government grants for Red Cross Hospitals and stores, etc. Mesopotamian "Our Day" collections and sale proceeds of assets of Mesopotamian commission account for the remainder. The Committee under its career with a capital investment of the face value of Rs. 56,33,000 (present market value Rs. 48,72,545) and Rs. 8,01,500-8-6 in floating and fixed deposit accounts.

New Organisation.—In 1919 when the Joint War Committee received an invitation to join the International League of Red Cross Societies, it was not deterred by the

fact that it could not, in fact, claim to be a regularly constituted Red Cross Society. But it began to take the necessary steps to regularise its position in this regard. It recognized, moreover, that it had been constituted as a committee for war purposes; but the great war was over, and it desired that, following the example of the Red Cross Society of England, it should secure formal authority to expend for civil purposes such portions of its capital funds as remained after meeting the primary purposes for which they were subscribed. A Bill was introduced by Sir Claude Hill in the Imperial Legislative Council in March 1920, designed to give effect to these intentions, and duly passed into law as Act XV of 1920. The first members of the Indian Red Cross Society as constituted by that Act, were nominated on 7th June 1920, and the Managing Body duly elected; the resources and the obligations of the Joint War Committee passed on that date to the Indian Cross Society.

List of Officers.

His Excellency the Viceroy and Governor-General of India (President); His Excellency the Commander-in-Chief in India (Vice-President); The Hon. Sir Malcolm Hailey, K.C.S.I., C.I.E., I.C.S. (Chairman, Managing Body).

Managing Body.

The Hon'ble Sir Mian Mohammad Shafi, K.C.S.I., C.I.E.

The Hon'ble Sir John Wood, K.C.I.E., C.S.I.

H. Sharp, Esq., C.S.I., C.I.E.

Lieut.-General Sir Charles Burtchell, K.C.B., C.M.G., K.H.S.

The Hon'ble Major-General Sir W. R. Edwards, K.C.I.E., C.B., C.M.G., K.H.P.

The Hon'ble Mr. H. Moncrieff-Smith, C.I.E., I.C.S.

Colonel Sir Sydney Crookshank, K.C.M.G., C.B., C.I.E.

The Hon'ble Mr. A. C. Chatterjee, C.I.E., I.C.S.

Col. W. D. Waghorn, C.B., C.M.G., R.E.

B. N. Mitra, Esq., C.I.E., C.B.E.

Lt.-Col. T. J. Carcy-Evans, M.C., I.M.S.

Rev. James Black, M.A., O.B.E.

W. J. Litster, Esq., (Hon. Treasurer).

Messrs. Nelson Dignasse & Co. (Hon. Auditors.)

Lieut.-Col. H. Ross, C.I.E., O.B.E., I.M.S. (Organising Secretary.)

Customs Tariff.

General import duties are levied for fiscal purposes and not for the protection of Indian industries. But the tariff has been modified with a view to admitting free or at favourable rates articles, the cheap import of which was considered necessary in the interests of the country. Thus certain raw materials, manures, agricultural implements and dairy appliances are admitted free. Machinery, printing materials, etc. are assessed at 2½ per cent. and iron and steel railway material and ships at 10 per cent. High duties are imposed on tobacco, liquors and matches.

Re-Imports.—Articles of foreign production on which import duty has been once paid, if subsequently exported, are on re-import exempted from duty on the following conditions:—

The Collector of Customs must be satisfied—

- (1) of the identity of the articles ;
- (2) that no drawback of duty was paid on their export ;
- (3) that the ownership has not changed between the time of re-export and subsequent re-import ;
- (4) that they are private personal property re-imported for personal use, not merchandise for sale ;
- (5) that not more than three years have passed since they were re-exported.

Duty is, however, charged on the cost of repairs done to the articles while abroad which should be declared by the person re-importing the articles in a form which will be supplied to him at the time of re-importation.

To facilitate identification on re-importation an export certificate giving the necessary particulars should be obtained from the Customs Department at the time of shipment of the articles which should be tendered for examination.

This concession of free entry on re-importation is not extended for the benefit of Companies or Corporate Bodies.

Drawbacks.—When any goods, capable of being easily identified which have been imported by sea into any Customs port from any foreign port, and upon which duties of Customs have been paid on importation, are re-exported by sea from such Customs port to any foreign port, or as provisions or stores for use on board a ship proceeding to a foreign port, seven-eighths of such duties shall, except as otherwise hereinafter provided, be repaid as drawback :

Provided that, in every such case, the goods be identified to the satisfaction of the Customs Collector at such Customs port and that the re-export be made within two years from the date of importation, as shown by the records of the Custom House, or within such extended

term as the Chief Customs Authority, or Chief Customs Officer on sufficient cause being shown, in any case determines, provided further that the Chief Customs Officer shall not extend the term to a period exceeding 3 years.

When any goods, having been charged with Import duty at one Customs port and thence exported to another, are re-exported by sea as aforesaid, drawback shall be allowed on such goods as if they had been so re-exported from the former port :

Provided that, in every such case, the goods be identified to the satisfaction of the Officer-in-Charge of the Custom House at the port of final exportation, and that such final exportation be made within three years from the date on which they were first imported into British India.

No drawback shall be allowed unless the claim to receive such drawback be made and established at the time of re-export.

No such payment of drawback shall be made until the vessel carrying the goods has put out to sea, or unless payment be demanded within six months from the date of entry for shipment.

Every person, or his duly authorised agent, claiming drawback on any goods duly exported, shall make and subscribe a declaration that such goods have been actually exported, and have not been re-landed and are not intended to be re-landed at any Customs port ; and that such person was at the time of entry outwards and shipment, and continues to be, entitled to drawback thereon.

Merchandise Marks.—Importers into India especially from countries other than the United Kingdom, would do well to make themselves acquainted with the law and regulations relating to merchandise marks. In Appendix II will be found the principal provisions of the Indian Merchandise Marks Act, 1889 and connected Acts and the notifications issued thereunder. The following summary of the regulations in force does not claim to be exhaustive. For those seeking more complete information a reference is suggested to the Merchandise Marks Manual which is published under the authority of the Government of India and obtainable of all agents for the sale of Indian Government publications.

Infringements or offences may be classified conveniently under four heads:—

1. Counterfeit trade marks ;
2. Trade descriptions that are false in respect of the country of origin ;
3. Trade descriptions that are false in other respects ; and
4. Lengths not properly stamped on piece-goods.

Schedule II—(Import Tariff).

Note.— In the expression “*ad valorem*” used in this schedule the reference is to real value as defined in section 30 of the Sea Customs Act, 1878 (VIII of 1878).

No.	Names of Articles.	Per	Tariff Valuation.	Duty.
I.—Food, Drink and Tobacco.				
FISH.				
1	FISH, SALTED, wet or dry	Indian maund of 82½ lbs. avoirdupois weight.	Such rate or rates of duty not exceeding one rupee as the Governor-General in Council may, by notification in the <i>Gazette of India</i> , from time to time prescribe.*

* Under Government of India Notification No. 1428, dated 17th November 1923, Jute Rags such as are used for paper making are exempt from payment of export duty provided that the Customs Collector is satisfied that they are useless for any purpose to which cloth or rope is ordinarily put.

THE VICTORIA CROSS.

The announcement, made at the Delhi Durbar in 1911, that in future Indians would be eligible for the Victoria Cross gave satisfaction which was increased during the War and afterwards by the award of that decoration to the following:—

Subadar (then Sepoy) Khudadad Khan, 129th Baluchis.—On 31st October 1914, at Hollebeke, Belgium, the British Officer in charge of the detachment having been wounded, and the other gun put out of action by a shell, Sepoy Khudadad, though himself wounded, remained working his gun until all the other five men of the gun detachment had been killed.

Naick Darwan Sing Negi, 1-39th Garhwal Rifles.—For great gallantry on the night of the 23rd-24th November 1914 near Festubert, France, when the Regiment was engaged in retaking and clearing the enemy out of our trenches and, although wounded in two places in the head, and also in the arm, being one of the first to push round each successive traverse, in the face of severe fire from bombs and rifles at the closest range.

Subadar (then Jamadar) Mir Dast, 55th Coke's Rifles.—For most conspicuous bravery and great ability at Ypres on 26th April 1915, when he led his platoon with great gallantry during the attack, and afterwards collected various parties of the Regiment (when no British Officers were left) and kept them under his command until the retirement was ordered. Jamadar Mir Dast subsequently on this day displayed remarkable courage in helping to carry eight British and Indian Officers into safety, whilst exposed to very heavy fire.

Rifleman Kulbir Thapa, 2-3rd Gurkha Rifles.—For most conspicuous bravery during operations against the German trenches south of Maquisart. When himself wounded, on the 25th September 1915, he found a badly wounded soldier of the 2nd Leicestershire Regiment behind the first line German trench, and though urged by the British soldier to save himself, he remained with him all day and night. In the early morning of the 26th September, in misty weather, he brought him out through the German wire, and, leaving him in a place of comparative safety returned and brought in two wounded Gurkhas one after the other. He then went back in broad daylight for the British soldier and brought him in also, carrying him most of the way and being at most points under the enemy's fire.

Havildar (then Lance-Naick) Lala, 41st Dogras.—Finding a British Officer of another regiment lying close to the enemy he dragged him into a temporary shelter which he himself had made, and in which he had already bandaged four wounded men. After bandaging his wounds he heard calls from the Adjutant of his own Regiment who was lying in the open severely wounded. The enemy were not more than one hundred yards distant, and it seemed certain death to go out in that direction, but Lance-Naick Lala insisted on going out to his Adjutant, and offered to crawl back with him on his back at once. When this was not permitted, he stripped off his own clothing to keep the wounded officer warmer and stayed with him till just before dark when

he returned to the shelter. After dark he carried the first wounded officer back to the main trenches, and then, returning with a stretcher carried back his Adjutant. He set a magnificent example of courage and devotion to his officers.

Sepoy Chatta Singh, 9th Bhopal Infantry.—For most conspicuous bravery and devotion to duty in leaving cover to assist his Commanding Officer who was lying wounded and helpless in the open. Sepoy Chatta Singh bound up the officer's wound and then dug cover for him with his entrenching tool, being exposed all the time to very heavy rifle fire. For five hours until nightfall he remained beside the wounded officer shielding him with his own body on the exposed side. He then, under cover of darkness, went back for assistance, and brought the officer into safety.

Naick Shahamad Khan, 89th Punjabis.—For most conspicuous bravery. He was in charge of a machine-gun section in an exposed position in front of and covering a gap in our new line within 150 yards of the enemy's entrenched position. He beat off three counter-attacks, and worked his gun single-handed after all his men, except two belt-fillers, had become casualties. For three hours he held the gap under very heavy fire while it was being made secure. When his gun was knocked out by hostile fire he and his two belt-fillers held their ground with rifles till ordered to withdraw. With three men sent to assist him he then brought back his gun, ammunition, and one severely wounded man unable to walk. Finally, he himself returned and removed all remaining arms and equipment except two shovels. But for his great gallantry and determination our line must have been penetrated by the enemy.

Lance-Defader Govind Singh, 28th Cavalry.—For most conspicuous bravery and devotion to duty in three volunteering to carry messages between the regiment and brigade headquarters, a distance of 1½ miles over open ground which was under the observation and heavy fire of the enemy. He succeeded each time in delivering his message although on each occasion his horse was shot, and he was compelled to finish the journey on foot.

Rifleman Karan Bahadur Rana, 23rd Gurkha Rifles.—For conspicuous bravery and resource in action under adverse conditions, and utter contempt of danger during an attack. He with a few other men succeeded, under intense fire, in creeping forward with a Lewis gun in order to engage an enemy machine gun which had caused severe casualties to officers and other ranks who had attempted to put it out of action. No. 1 of the Lewis gun party opened fire and was shot immediately. Without a moment's hesitation Karan Bahadur pushed the dead man off the gun, and in spite of bombs thrown at him and heavy fire from both flanks, he opened fire and knocked out the enemy machine gun crew. Then switching his fire on the enemy bombers and riflemen in front of him, he silenced their fire. He kept his gun in action, and showed the greatest coolness in removing defects which had twice prevented the gun from firing. He did magnificent work during the remainder of the day and when a withdrawal was ordered

assisted with covering fire until the enemy was close to him. He displayed throughout a very high standard of valour and devotion to duty.

Ressaldar Badlu Singh, 14th Lancers attached 29th Lancers.—For most conspicuous bravery and self-sacrifice on the morning of the 23rd September 1916, when his squadron charged a strong enemy position on the west bank of the River Jordan, between the river and Kh. es Samariveh Village. On nearing the position Ressaldar Badlu Singh realised that the squadron was suffering casualties from a small hill on the left front occupied by machine guns and 200 infantry. Without the slightest hesitation he collected six other ranks and with the greatest dash and an entire disregard of danger charged and captured the position, thereby saving very heavy casualties to the squadron. He was mortally wounded on the very top of the hill when capturing one of the machine guns single-handed, but all the machine guns and infantry had surrendered to him before he died. His valour and initiative were of the highest order.

Rifleman Gobar Sing Negi, 2nd Battalion, 39th Garhwal Rifles.—For most conspicuous bravery on 10th March 1915 at Neuve Chapelle. During an attack on the German position he was one of a bayonet party with bombs who entered their main trench, and was the first man to go round each traverse, driving back the enemy until they were eventually forced to surrender. He was killed during this engagement.

Sepoy Ishaw Singh, 28th Punjabis.—For devotion and bravery "quite beyond all praise" in Waziristan on 10th April, 1921. He received a severe gunshot wound in the chest while serving a Lewis gun, and when all the havildars had been killed or disabled he struggled to his feet, called to his assistance two men, and charged and recovered the gun, restoring it to action. He refused medical attention, insisting first on pointing out where the other wounded were and on carrying water to them. While the medical man was attending to these wounded he shielded him with his body and he submitted to medical attention himself only after he was exhausted through three hours' continual effort and by loss of blood.

PASSPORT REGULATIONS.

The following are the chief regulations concerning Passports:—

1. Applications for Indian Passports must be made in the prescribed form, and submitted either direct or through the local authority—(a) in the case of a resident in British India, to the Local Government or Local Administration concerned; (b) in the case of a resident in an Indian State, to the Agent to the Governor-General or Political Resident concerned.

2. Forms of application may be obtained from any District Magistrate, from the Commissioner of Police, Bombay, by post from the Passport Officer to the Government of Bombay, by personal application at the Passport Office, the Secretariat, Bombay, or from any of the leading Banking and Shipping Agents in Bombay. The charge for an Indian Passport is Rs. 3.

3. Indian Passports are granted to—(a) British subjects by birth; (b) wives and widows of such persons; (c) British subjects by naturalisation; and (d) British protected persons. A married woman is deemed to be a subject of the State of which her husband is for the time being a subject.

4. Passports are granted upon the production of a declaration by the applicant (in the case of a child under 15 requiring a separate passport by the child's parent or guardian) in the prescribed form of application verified by a declaration made by a *Political Officer, Magistrate, Justice of the Peace, Police Officer not below the rank of*

Superintendent or Notary Public, resident in India. If possible the declaration should be signed by an officer of the district in which the applicant is resident. Otherwise the issue of a Passport may be delayed while enquiries are being made from the local authorities.

5. If the applicant for a Passport be a British subject by naturalisation the certificate of naturalisation must be forwarded with the form of application to the Officer empowered to grant the Passport. It will be returned with the Passport to the applicant through the person who may have verified the declaration. British subjects by naturalisation will be described as such, in their Passports, which will be issued subject to the necessary qualifications.

6. Small duplicate unmounted photographs of the applicant (and wife, if to be included) must be forwarded with the application for a Passport, one of which must be certified on the back by the person verifying the declaration made in the application form.

7. Indian Passports are not available beyond two years from the date of issue. They may be renewed for four further periods of two years each after which fresh Passports must be obtained. Application for renewal should be made in the prescribed form which should be certified by one of the officers shown in para. 4. The fee for each renewal is Re. 1-8-0.

8. Passports cannot be issued or renewed on behalf of persons already abroad: such

persons should apply for Passports to the London Foreign Office or nearest British Mission or Consulate. Passports must not be sent out of India by post.

9. In the case of an applicant for a Passport being unable to write English a transcription in English should be placed below the applicant's vernacular signature in the form of application. In the case of an illiterate person, a thumb impression should be substituted for a signature on the form of application, which should be certified by the person verifying the declaration.

10. The Passport is only available for travel to the countries named but may be endorsed for additional countries. No charge is made for such endorsements given by British authorities in India, but the possession of a Passport so endorsed does not exempt the holder from compliance with any immigration laws in force in British or Foreign countries, or from the necessity of obtaining a Visa when required.

11. Passports endorsed as valid for the British Empire are also available for travelling to territory under British protection or mandate, not however, including Palestine, Mesopotamia or Egypt, for which countries the Passport must be especially endorsed.

Except in the case of (1) military officers and other ranks and employees of the Government of Iraq and (2) *bona fide* representatives of

firms, Passports for Iraq cannot be granted without the previous sanction of the local authorities in Iraq. The Passport Officer will, on request, ask for this permission by post, or, if the applicant is prepared to defray the cost of a telegram, by cable. Applicants must state clearly the nature of their business in Iraq and the precise address at which they propose to reside on reaching their destination, as the local authorities will not grant them permission to land unless they are assured that the applicants have definite business in the country and have secured accommodation beforehand.

Restrictions also exist on travel to various parts of the British Empire and to certain foreign countries. Amongst these may be mentioned Australia, Canada, Constantinople, Egypt, Gibraltar, Mohammerah and Abadan, New Zealand, Palestine, Southern Rhodesia, Union of South Africa, South West Africa and the United States of America. The restrictions apply particularly to Indians.

Parda-nashin or gosha women desirous of travelling from India to Malaya, the Straits Settlements, the East Africa Protectorate, Uganda, Zanzibar, Mauritius, the Nyassaland Protectorate and the Union of South Africa are exempted from the necessity of attaching their photographs to their applications for Passports or of appearing in person before the Passport issuing authorities.

Racing.

Calcutta.

[Season 1922-23].

King-Emperor's Cup. Distance 1 mile.—

Mr. Ephraim's Orange William (9st. 3lbs.),
Morris 1

GOLF.

Amateur Championship of India—G.D. Forester

beat A. E. H. Killick by 15 up and 13 to play.

Western India Championship. Nasik—J. R. Abercrombie beat B. C. Lowndes.

South India Championship, Ootacamund—Carriek beat Peebles.

South India Ladies' Championship, Ootacamund—Mrs. Cruickshank beat Mrs. Dallas Smith.

Gulmarg (Kashmir) Championship—H. S. Malik beat D. Johnstone.

Bombay.

Golfer's Cup—W. F. Duke beat G. C. Thow.

Blackheath Gold Medal—L. P. S. Bourne Runner-up—J. W. Jessop.

St. George's Medal—W. F. Duke.

Calcutta Medal—W. B. Whiteside. Runners-up—C. Q. Wilkinson and A. G. Pearson.

Merchants' and Bankers' Cup—Messrs. Mackinnon Mackenzie & Co.

Nasik.

Nasik Cup—W. de C. Walsh.

Bombay Cup—W. J. Jenkins.

President's Cup—J. R. Abercrombie.

Peace Cup—J. L. Hamilton.

Captain's Cup—J. T. Alexander. Runner-up—W. Inder.

Advanl Cup—D. V. Wanostrocht.

Challenge Shield and Gold Medal—J. R. Abercrombie. Runner-up—B. C. Lowndes.

Consolation Cup—J. L. Hamilton. Runner-up—David Walker.

Bombay Bangle—Mrs. Butterworth. Runner-up—Mrs. Sandilands.

Ladies' Consolation Cup—Mrs. Bullock. Runner-up—Mrs. Clayton.

Ladies' Medal—Miss Angela Forbes-Smith. Runner-up—Mrs. Butterworth.

Pali Hill.

Greaves Memorial Cup—A. G. O'Neill.

President's Cup—A. N. F. Moore.

Gold Medal—C. F. Morris.

Pali Hill Cup—C. F. Morris.

Electric Competition—C. H. Hewlett

Poona.

H. E. the Governor's Cup—Rajkumar Desai)
 Runner-up—Major Warren.
 Leach and Webber's Cup—Colonel Melhuish.
 W. I. T. C. Challenge Cup—Jessop.
 Mr. Hatch's Cup—Captain Alcock. Runners-
 up—Pooley and Rajkumar Desai).
 H. E. Lady Lloyd's Cup—Mrs. Warren and
 Mrs. McLeod.
 Ladies' Electric—Mrs. Palmer. Runners-up—
 Mrs. Warren and Mrs. Whitworth.
 Whiteaway Laidlaw Cup—J. Sharples Run.

Quetta.

Inter-Regimental Cup—Major C. A. L. Brown-
 low and Lt. J. B. Jones.
 Staff College Cup—Lt.-Col. D. O. Cowie and
 Major W. A. H. Bird.
 A. G. G.'s Cup—Lt.-Col. L. Carr.
 Calcutta Cup, Ootacamund—Rajkumar beat
 French.
 Ladies' Electric Competition, Ootacamund—
 Mrs. Palin.
 Merchants' Cup, Karachi—J. R. Baxter and
 W. E. Petrie.

ATHLETICS.

Aft-India Amateur Meeting, Bombay—

Marathon Race—(1922) N. V. R. Naidu.
 Time—56 mins. 21 4-5 secs. (1923) Bds.
 Turner, 2nd Middlesex Regiment.
 100 Yards—(1922) Lce.-Cpl. Roberts, K. R. R.

YACHTING AND BOATING.

Royal Bombay Yacht Club Regatta—
 Commodore's Cups—Colonel Gillespie (Sheila)
 in "A" Class. Mr. Durkin (Kelpie) in "B"
 Class. Mr. Rich (Loon) in Sea Birds Class.
 Mr. Scott (Rosalind) in Tontitis Class.
 Captain Gentles' Cup—Colonel Gillespie
 (Sheila).
 Captain Gentles' Cup—Mr. Durkin (Kelpie).
 Gordon Bennett Cup—(Bat).
 Lord Curzon Cup—Mr. MacBeth (Puffin).
 Naini Tal Yacht Club Regatta—
 All-India Cup—Naini Tal Y. C. beat Royal
 Bombay Y. C. by 12 points.
 Royal Connaught Boat Club Regatta, Poona—
 Junior Fours ($\frac{1}{2}$ mile)—R. F. A. Time—3
 mins. 21 secs.

Mixed Double Sculls ($\frac{1}{2}$ mile)—Mrs. A. S. M.
 Winder, A. S. M. Winder and Miss O'Gor-
 man (cox). Time—1 min. 59 secs.
 Service Fours ($\frac{1}{2}$ mile)—Signal School.
 Time—4 mins. 47 secs.
 Junior Sculls ($\frac{1}{2}$ mile)—R. E. Lines. Time—
 4 mins. 1 sec.
 Canoe Race—Captain and Mrs. Dobbie.
 Junior Pairs ($\frac{1}{2}$ mile)—Royal Sappers and
 Miners. Time—4 mins. 9 secs.
 Senior Scull, ($\frac{1}{2}$ mile)—D. H. Dawson. Time—
 5 mins. 3 secs.
 Senior Pairs ($\frac{1}{2}$ mile)—Royal Sappers and
 Miners. Time—3 mins. 33 secs.
 Challenge Fours ($\frac{1}{2}$ mile)—Royal Connaught
 Boat Club. Time—4 mins. 47 secs.

MOTOR CYCLING.

BOMBAY SPED CHAMPIONSHIPS.

Under 250 c.c.—A. F. Soundy (Triumph Junior).
 Under 350 c.c.—H. Harner (Matador-Bradshaw).
 Under 600 c.c.—D. V. Vartak (Norton).

Unlimited—S. A. Palkhiwalla (Harley David-
 son).
 Championship Finals—S. A. Palkhiwalla (Harley
 Davidson).

Banking.

An event of great importance in the history of Indian banking was the formation on the 27th January 1921 of the Imperial Bank of India by amalgamation of the three Presidency Banks of Bengal, Bombay and Madras.

The idea of a Central Banking establishment for British India was mooted as early as 1838, and was the subject of a minute by Mr. James Wilson, when Finance Member, in 1859. Again, in 1867 Mr. Dickson, the well-known Secretary of the Bank of Bengal, submitted detailed proposals for an amalgamation of the three Presidency Banks. On various later occasions the matter was brought forward without result and it was discussed by the Chamberlain Commission on Indian Finance and Currency in 1913. The present scheme which has come to fruition was however the result of a *rapprochement* on the part of the Banks themselves as a result of the experience gained during the war and the realisation of the desirability of strengthening and extending the Banking system in India.

The Presidency Banks:—The history of the Presidency Banks in their relationship with Government falls into three well-defined stages. Prior to 1862 the Presidency Banks had the right of note issue, but were directly controlled by Government and the scope of their business was restricted by their charters. The second period was from 1862 to 1876. In 1862 the Banks were deprived of the right of note issue, though by their agreements of that year they were authorised to transact the paper currency business as agents of Government. As compensation for the loss of their right of issue, they were given the use of the Government balances and the management of the treasury work at the Presidency towns and at their branches. The old statutory limitations on their business were at the same time greatly relaxed, though the Government's power of control remained unchanged. In 1866 the agreements were revised and the paper currency business was removed from their control and placed under the direct management of Government. The third period dates from the Presidency Banks Act of 1876 by which nearly all the most important limitations of the earlier period were reimposed. Put very briefly, the principal restrictions imposed by this Act prohibited the Banks from conducting foreign exchange business, from borrowing or receiving deposits payable out of India, and from lending for a longer period than six months, or upon mortgage or on the security of immovable property or upon promissory notes bearing less than two independent names or upon goods, unless the goods of the title to them were deposited with the Bank as security. At the same time Government abandoned direct interference in the management, ceasing to appoint official directors and disposing of their shares in the Banks. The Banks no longer enjoyed the full use of the Government balances. Reserve Treasuries were constituted at the Presidency towns into which the surplus revenues were drawn and the balances left at the disposal of the Banks were strictly limited.

This system continued with only minor modifications until 1920. During the war, however, the policy was deliberately adopted of reducing the amount of the balances held in the Reserve Treasuries and leaving much larger balances with the Headquarters of the Presidency Banks in order to assist the money market.

The Imperial Bank:—Under the Imperial Bank of India Act (XLVII of 1920), the control of the Bank is entrusted to a Central Board of Governors with Local Boards at Calcutta, Bombay and Madras and such other places as the Central Board, with the previous sanction of the Governor-General in Council may determine. The Central Board of Governors consists of—

- (a) Managing Governors not exceeding two in number, appointed by the Governor-General in Council on recommendation by the Central Board;
- (b) the Presidents, Vice-Presidents and Secretaries of the Local Boards;
- (c) the Controller of the Currency, or other officer nominated by the Governor-General in Council; and
- (d) not more than four non-officials, nominated by the Governor-General in Council.

Representatives of any new Local Boards, which may be constituted, may be added at the discretion of the Central Board.

The Controller of the Currency and the Secretaries of the Local Boards are entitled to attend the meetings of the Central Board but not to vote under the agreement with Government. The Governor-General in Council is entitled to issue instructions to the Bank in respect of any matter which in his opinion vitally affects his financial policy or the safety of the Government balances, and if the Controller of the Currency or such other officer of Government as may be nominated by the Governor-General in Council to be a Governor of the Central Board shall give notice in writing to the Managing Governors that he considers that any action proposed to be taken by the Bank will be detrimental to the Government as affecting the matters aforesaid, such action shall not be taken without the approval in writing of the Governor-General in Council. Under the Imperial Bank of India Act provision was made for the increase of the capital of the Bank. The capital of the three Presidency Banks consisted of 3½ crores of rupees in shares of Rs. 500 each, fully subscribed. The additional capital authorised was 7½ crores in shares of Rs. 500 each, of which Rs. 125 has been called up, making the present capital of the Bank Rs. 11½ crores. Of which Rs. 5,82,50,000 has been paid up. The reserve fund of the Bank is 4 crores 35 lacs and the balance sheet of 30th June 1923 showed the Government Balance at Rs. 12,56,70,782, other Deposits at Rs. 70,47,71,978 and cash Rs. 29,13,48,054 with a percentage of cash to liabilities of 34.86.

Class of Business.—The Imperial Bank of India Act follows the Presidency Banks Act of 1876 in defining absolutely the class of business in which the Bank may engage, though the older limitations are modified in some minor points. It permits for the first time the constitution of a London Office and the borrowing of money in England for the purpose of the Bank's business upon the security of assets of the Bank, but not the opening of cash credits, keeping cash accounts or receiving deposits in London except from former customers of the Presidency Banks. The Act provides for an agreement between the Bank and the Secretary of State, and this agreement, which was signed on the 27th January 1921 and is for a period of ten years determinable thereafter by either party with one year's notice, provides, *inter alia*, for the following important matters:—

- (1) All the general banking business of the Government of India is to be carried out by the Imperial Bank.

- (2) The Bank will hold all the Treasury Balances at Headquarters and at its branches. This involves the abolition of the Reserve Treasury system.
- (3) Within five years the Bank undertakes to open 100 new branches of which the Government of India may determine the location of one in four. The branches and agencies of the three Presidency Banks prior to the date of amalgamation numbered 69, including the Colombo branch of the Bank of Madras. The Bank of Bengal had no branches prior to the proposal to transfer Government business to the Bank in 1861-62 but no less than 18 branches were established before 1868.
- (4) The management of the Public Debt will continue to be conducted by the Bank for specified remuneration.

THE DIRECTORATE.

Managing Governors	{	Sir Bernard Hunter, Kt.
				{	S. A. H. Sitwell, Esq.

In Schedule 1 Part 1 of the Act, the various descriptions of business which the Bank may transact are laid down, and in Part 2 it is expressly provided that the Bank shall not transact any kind of banking business other than that sanctioned in Part 1.

Briefly stated, the main classes of business sanctioned are:—

- (1) Advancing money upon the security of:—
 - (a) Stocks, &c., in which a trustee is authorised by Act to invest trust monies.
 - (b) Securities issued by State aided Railways, notified by the Governor-General-in-Council.
 - (c) Debentures, or other securities issued under Act, by, or on behalf of, a District Board.
 - (d) Goods, or documents of title thereto, deposited with, or assigned to the Bank.
 - (e) Accepted Bills of Exchange or Promissory Notes.
 - (f) Fully paid shares and debentures of Companies with limited liability or immovable property or documents of title relating thereto, as collateral security where the original security is one of those specified in a, b, c, d and, if authorised by the Central Board, in e.
- (2) With the sanction of the Local Government, advancing money to Courts of Wards upon security of estates in their charge.
- (3) Drawing, accepting, discounting, buying and selling bills of exchange and other negotiable securities payable in India and Ceylon, and subject to the directions of the Governor-General in Council, the discounting, buying and selling of bills of exchange payable outside India for and from or to such Banks as may be approved.
- (4) Investing the Bank's funds in the securities referred to in (1) a, b, c.

- (5) Making Bank Post Bills and Letters of Credit payable in India and Ceylon.

- (6) Buying and selling gold and silver.
- (7) Receiving deposits.
- (8) Receiving securities for safe custody.
- (9) Selling such properties as may come into the Bank's possession in satisfaction of claims.
- (10) Transacting agency business on commission.

- (11) Acting as Administrator, for winding up estates.

- (12) Drawing bills of exchange and granting letters of credit payable out of India for the use of principles in connection with (11) and also for private constituents for *bona fide* personal needs.

- (13) Buying, for the purpose of meeting such bills, &c., bills of exchange payable out of India at any usance not exceeding six months.

- (14) Borrowing money in India.

- (15) Borrowing money in England upon security of assets of the Bank, but not otherwise.

The principal restrictions placed on the business of the Bank in Part 2 are as follows:—

- (1) It shall not make any loan or advance:—

- (a) For a longer period than six months.
- (b) upon the security of stock or shares of the Bank;
- (c) save in the case of estates specified in Part 1 (Courts of Ward) upon mortgage or security of immovable property or documents of title thereof.

- (2) The amount which may be advanced to any individual or partnership is limited.

- (3) Discounts cannot be made or advances on personal security given, unless such discounts or advances carry with them the several responsibilities of at least two persons or firms unconnected with each other in general partnership.

Government Deposits.

The proportions which Government deposits have borne from time to time to the total Capital Reserve and deposit of the three Banks are shown below :—

In Lakhs of Rupees.

THE EXCHANGE BANKS.

The Banks carrying on Exchange business in India are merely branch agencies of Banks having their head offices in London, on the Continent, or in the Far East and the United States. Originally their business was confined almost exclusively to the financing of the external trade of India; but in recent years most of them, while continuing to finance this part of India's trade, have also taken an active part in the financing of the internal portion also at the places where their branches are situated.

At one time the Banks carried on their operations in India almost entirely with money borrowed elsewhere, principally in London—the home offices of the Banks attracting de-

posits for use in India by offering rates of interest much higher than the English Banks were able to quote. Within recent years however it has been discovered that it is possible to attract deposits in India on quite as favourable terms as can be done in London and a very large proportion of the financing done by the Exchange Banks is now carried through by means of money actually borrowed in India. No information is available as to how far each Bank has secured deposits in India, but the following statement published by the Director-General of Statistics in India shows how rapidly such deposits have grown in the aggregate within recent years.

Exchange Banks' Investments.

Turning now to the question of the investment of the Banks' resources, so far as it concerns India, this to a great extent consists of the purchase of bills drawn against imports and exports to and from India.

The financing of the import trade originated and is carried through however for the most part by Branches outside India, the Indian Branches' share in the business consisting principally in collecting the amount of the bills at maturity and in furnishing their other branches with information as to the means and standing of the drawees of the bills, and it is as regards the export business that the Indian Branches are more immediately concerned. The Exchange Banks have practically a monopoly of the export finance in India and in view of the dimensions of the trade which has to be dealt with the Banks would under ordinary circumstances require to utilise a very large proportion of their resources in carrying through the business. They are able however by a system of rediscount in London to limit the employment of their own resources to a comparatively small figure in relation to the business they actually put through. No definite information can be secured as to the extent to which rediscounting in London is carried on but the following figures appearing in the balance sheets dated 31st December 1922 of the undenoted Banks will give some idea of this.

LIABILITY ON BILLS OF EXCHANGE RE-DISCOUNTED AND STILL CURRENT.

£

Chartered Bank of India, Australia and China.	7,045,000
Eastern Bank, Ltd.	296,000
Hongkong and Shanghai Banking Corporation.	4,882,000
Mercantile Bank of India, Ltd.	2,675,000
National Bank of India, Ltd.	5,225,000
P. & O. Banking Corporation, Ltd.	14,047,000
	33,970,000

The above figures do not of course relate to re-discounts of Indian bills alone, as the Banks operate in other parts of the world also, but it may safely be inferred that bills drawn in India form a very large proportion of the whole.

The bills against exports are largely drawn at three months' sight and may either be "clean" or be accompanied by the documents relating to the goods in respect of which they are drawn. Most of them are drawn on well known firms at home or against credits opened by Banks or financial houses in England and bearing as they do an Exchange Bank endorsement they are readily taken up by the discount houses and Banks in London. Any bills purchased in India are sent home by the first possible Mail so that presuming they are rediscounted as soon as they reach London the Exchange Banks are able to secure the return of their money in about 16 or 17 days instead of having to wait for three months which would be the case if they were unable to rediscount. It must not be assumed however that all bills are rediscounted as soon as they reach London as at times it suits the Banks to hold up the bills in anticipation of a fall in the London discount rate while on occasions also the Banks prefer to hold the bills on their own account as an investment until maturity.

The Banks place themselves in funds in India for the purpose of purchasing export bills in a variety of ways of which the following are the principal:—

- (1) Proceeds of import bills as they mature.
- (2) Sale of drafts and telegraphic transfers payable in London and elsewhere out of India.
- (3) Purchase of Council Bills and Telegraphic Transfers payable in India from the Secretary of State.
- (4) Imports of bar gold and silver bullion.
- (5) Imports of sovereigns from London, Egypt or Australia.

The remaining business transacted by the Banks in India is of the usual nature and need not be given in detail.

An interesting event in Indian Banking history is the recent entry in the Banking field here of one of the English "Big Five." This has been brought about by the acquisition of the business of Cox & Co., by Lloyds Bank.

The following is a statement of the position of the various Exchange Banks carrying on business in India as at 31st December 1922 :—

In Thousands of Rs.

Name.	Capital	Reserve.	Deposits.	Cash and Investments.

JOINT STOCK BANKS.

Previous to 1906 there were few Banks of this description operating in India, and such as were then in existence were of comparatively small importance and had their business confined to a very restricted area. The rapid development of this class of Bank, which has been so marked a feature in Banking within recent years, really had its origin in Bombay and set in with the establishment of the Bank of India and the Indian Specie Bank in 1906. After that time there was a perfect stream of new flotations, and although many of the new Companies confined themselves to legitimate banking business, on the other hand a very large number engaged in other businesses in addition and can hardly be properly classed as Banks.

These Banks made very great strides during the first few years of their existence, but it was generally suspected in well informed circles that the business of many of the Banks was of a very speculative and unsafe character and it was a matter of no great surprise to many people when it became known that some of the Banks were in difficulties.

The first important failure to take place was that of the People's Bank of India and the loss of confidence caused by the failure of that Bank resulted in a very large number of other failures, the principal being that of the Indian Specie Bank.

Since those events of ten years ago, confidence has been largely restored. But in April 1923 the Alliance Bank of Simla suspended payment and is now in voluntary liquidation. The effect of the failure of this old established Bank might have been disastrous but for the prompt action of the Imperial Bank which dealt with the situation in close association with the Government of India. The Imperial Bank undertook to pay the depositors of the Alliance Bank 50 per cent. of the amounts due to them. A panic was averted and a critical period was passed through with little difficulty.

During 1923 the Tata Industrial Bank, which was established in 1918, was merged in the Central Bank of India.

The following shows the position of the better known existing Banks as it appears in the latest available Balance Sheets :—

In Lakhs of Rupees.

INDIAN PRIVATE BANKERS AND SHROFFS.

Indian private Bankers and Shroffs flourished in India long before Joint Stock Banks were ever thought of, and it seems likely that they will continue to thrive for some very considerable time to come. The use of the word "Shroff" is usually associated with a person who charges usurious rates of interest to impetuous people, but this is hardly fair to the people known as "shroffs" in banking circles, as there is no doubt that the latter are of very real service to the business community and of very great assistance to Banks in India. Under present conditions the Banks in India can never hope to be able to get into sufficiently close touch with the affairs of the vast trading community in India to enable them to grant accommodation to more than a few of these traders direct, and it is in his capacity as middleman that the shroff proves of such great service. In this capacity also he brings a very considerable volume of business within the scope of the Presidency Banks Act, and enables the Presidency Banks to give accommodation which, without his assistance, the Banks would not be permitted to give. The shroff's position as an intermediary between the trading community and the Banks usually arises in something after the following manner. A shopkeeper in the bazaar, with limited means of his own, finds that, after using all his own money, he still requires say Rs. 25,000 to stock his shop suitably. He thereupon approaches the shroff, and the latter after very careful inquiries as to the shopkeeper's position grants the accommodation, if he is satisfied that the business is safe. The business, as a rule, is arranged through a hoondee broker, and in the case referred to the latter may probably approach about ten shroffs and secure accommodation from them to the extent of Rs. 2,500 each. A hoondee is usually drawn at a currency of about 2 months is almost invariably taken by the shroffs in respect of such advances.

A stage is reached however when the demands on the shroffs are greater than they are able to meet out of their own money, and it is at this

point that the assistance of the Banks is called into requisition. The shroffs do this by taking a number of the bills they already hold to the Banks for discount under their endorsement, and the Banks accept such bills freely to an extent determined in each case by the standing of the shroff and the strength of the drawers. The extent to which any one shroff may grant accommodation in the bazaar is therefore dependent on two factors, viz., (1) the limit which he himself may think it advisable to place on his transactions, and (2) the extent to which the Banks are prepared to discount bills bearing his endorsement. The shroffs keep in very close touch with all the traders to whom they grant accommodation, and past experience has shown that the class of business above referred to is one of the safest the Banks can engage in.

The rates charged by the shroffs are usually based on the rates at which they in turn can discount the bills with the Banks and necessarily vary according to the standing of the borrower and with the season of the year. Generally speaking, however, a charge of two annas per cent. per mensem above the Bank's rate of discount, or $1\frac{1}{2}\%$, is a fair average rate charged in Bombay to a first class borrower. Rates in Calcutta and Madras are on a slightly higher scale due in a great measure to the fact that the competition among the shroffs for business is not so keen in these places as it is in Bombay.

The shroffs who engage in the class of business above described are principally Marwaries and Multanis having their Head Offices for the most part in Bikanir and Shikarpur, respectively, the business elsewhere than at the Head Offices being carried on by "Moonims" who have very wide powers.

It is not known to what extent native bankers and shroffs receive deposits and engage in exchange business throughout India, but there is no doubt that this is done to a very considerable extent.

THE BANK RATE.

Formerly each Presidency Bank fixed its own Bank Rate, and the rates were not uniform. Now the Imperial Bank fixes the rate for the whole of India. The rate fixed represents the rate charged by the Banks on demand loans against Government securities only and advances on other securities or discounts are granted as

a rule at a slightly higher rate. Ordinarily such advances or discounts are granted at from one-half to one per cent. over the official rate; but this does not always apply and in the monsoon months, when the Bank rate is sometimes nominal, it often happens that such accommodation is granted at the official rate or even less.

The following statement shows the average Bank Rate since the Imperial Bank was constituted:—

Year.	1st Half-year.	2nd Half-year.	Yearly average.
1921	6.038	5.108	5.578
1922	7.132	4.510	5.821
1923	7.419

BANKERS' CLEARING HOUSES.

The principal Clearing Houses in India are those of Calcutta, Bombay, Madras, Rangoon, Colombo and Karachi, and of these the first two are by far the most important. The members at these places consist of the Imperial Bank, most of the Exchange Banks and English Banking Agency firms, and a few of the better known of the local Joint Stock Banks. No Bank is entitled to claim to be a member as of right and any application for admission to a Clearing must be proposed and seconded by two members and be subject thereafter to ballot by the existing members.

The duties of settling Bank are undertaken by the Imperial Bank at each of the places mentioned and a representative of each member attends at the office of that Bank on each business day at the time fixed to deliver all cheques he may have negotiated on other members

and to receive in exchange all cheques drawn on him negotiated by the latter. After all the cheques have been received and delivered the representative of each Bank advises the settling Bank of the difference between his total receipts and deliveries and the settling Bank thereafter strikes a final balance to satisfy itself that the totals of the debtor balances agrees with the total of the creditor balances. The debtor Banks thereafter arrange to pay the amounts due by them to the settling Bank during the course of the day and the latter in turn arranges to pay on receipt of those amounts the balances due to the creditor Banks. In practice however all the members keep Bank accounts with the settling Bank so that the final balances are settled by cheques and book entries thus doing away with the necessity for cash in any form.

The figures for the Clearing Houses in India above referred to are given below:—

Total amount of Cheques Cleared Annually.

In lakhs of Rupees.

The Railways.

The history of Indian Railways very closely reflects the financial vicissitudes of the country. Not for some time after the establishment of Railways in England was their construction in India contemplated, and then to test their applicability to Eastern conditions three experimental lines were sanctioned in 1845. These were from Calcutta to Raniganj (127 miles), the East Indian Railway; Bombay to Kalyan (33) miles, Great Indian Peninsula Railway; and Madras to Arkonam (39 miles), Madras Railway. Indian Railway building on a serious scale dates from Lord Dalhousie's great minute of 1853, wherein, after dwelling upon the great social, political and commercial advantages of connecting the chief cities by rail, he suggested a great scheme of trunk lines linking the Presidencies with each other and the inland regions with the principal ports. This reasoning commended itself to the Directors of the East India Company, and it was powerfully reinforced when, during the Mutiny, the barriers imposed on free communication were severely felt. As there was no private capital in India available for railway construction, English Companies, the interest on whose capital was guaranteed by the State, were formed for the purpose. By the end of 1859 contracts had been entered into with eight companies for the construction of 5,000 miles of line, involving a guaranteed capital of £52 millions. These companies were (1) The East Indian; (2) the Great Indian Peninsula; (3) the Madras; (4) the Bombay, Baroda and Central India; (5) the Eastern Bengal; (6) the Indian Branch, now the Oudh and Rohilkund State Railway; (7) the Sind, Punjab and Delhi, now merged in the North Western State Railway; (8) the Great Southern of India, now the South Indian Railway. The scheme laid the foundations of the Indian Railway system as it exists to-day.

Early Disappointments.

The main principle in the formation of these companies was a Government guarantee on their capital, for this was the only condition on which investors would come forward. This guarantee was five per cent. coupled with the free grant of all the land required; in return the companies were required to share the surplus profits with the Government, after the guaranteed interest had been met; the interest charges were calculated at 22½ to the rupee; the Railways were to be sold to Government on fixed terms at the close of twenty-five years and the Government were to exercise close control over expenditure and working. The early results were disappointing. Whilst the Railways greatly increased the efficiency of the administration, the mobility of the troops, the trade of the country, and the movement of the population, they failed to make profits sufficient to meet the guaranteed interest. Some critics attributed this to the unnecessarily high standard of construction adopted, and to the engineers' ignorance of local conditions: the result was that by 1869 the deficit on the Railway budget was Rs. 166½ lakhs. Seeking for some more economical method of construction, the Government

secured sanction to the building of lines by direct State Agency, and funds were allotted for the purpose, the metre gauge being adopted for cheapness. Funds soon lapsed and the money available had to be diverted to converting the Sind and Punjab lines from metre to broad-gauge for strategic reasons. Government had therefore again to resort to the system of guarantee, and the Indian Midland (1882-85), since absorbed by the Great Indian Peninsula; the Bengal-Nagpur (1883-87), the Southern Maratha (1882), and the Assam-Bengal (1891) were constructed under guarantees, but on easier terms than the first companies. Their total length was over 4,000 miles.

Famine and Frontiers.

In 1879, embarrassed by famine and by the fall of the exchange value of the rupee, Government again endeavoured to enlist unaided private enterprise. Four companies were promoted,—the Nilgiri, the Delhi-Umballa-Kalka, the Bengal Central, and the Bengal North-Western. The first became bankrupt; the second and third received guarantees, and the Tirhut Railway had to be leased to the fourth. A step of even greater importance was taken when Native States were invited to undertake construction in their own territories, and the Nizam's Government guaranteed the interest on 330 miles of line in the State of Hyderabad. This was the first of the large system of Native State Railways. In the first period up to 1870, 4,255 miles were opened, of which all save 45 were on the broad gauge; during the next ten years there were opened 4,230, making the total 8,494 (on the broad gauge 6,562, the metre 1,865, and narrow 67). Then ensued a period of financial ease. It was broken by the fall in exchange and the costly lines built on the frontier. The Penjdeh incident, which brought Great Britain and Russia to the verge of war, necessitated the connection of our outposts at Quetta and Chaman with the main trunk lines. The sections through the desolate Harnal and Bolan Passes were enormously costly; it is said that they might have been ballasted with rupees; the long tunnel under the Khojak Pass added largely to this necessary, but unprofitable outlay.

Rebate Terms Established.

This induced the fourth period—the system of rebates. Instead of a gold subsidy, companies were offered a rebate on the gross earnings of the traffic interchanged with the main line, so that the dividend might rise to four per cent. but the rebate was limited to 20 per cent. of the gross earnings. Under these conditions, there were promoted the Ahmedabad-Prantel, the South Behar, and the Southern Punjab, although only in the case of the first were the terms strictly adhered to. The Barsi Light Railway, on the two feet six inches gauge, entered the field without any guarantee, and with rolling stock designed to illustrate the carrying power of this gauge. The rebate terms being found unattractive in view of the competition of 4 per cent. trustee stocks; they were revised in 1896 to provide for an

absolute guarantee of 8 per cent. with a share of surplus profits, or rebate up to the full extent of the main line's net earnings in supplement of their own net earnings, the total being limited to 3½ per cent. on the capital outlay. Under these terms, a considerable number of feeder line companies was promoted, though in none were the conditions arbitrarily exacted. As these terms did not at first attain their purpose, they were further revised, and in lieu was substituted an increase in the rate of guarantee from 8 to 3½ per cent. and of rebate from 3½ to 5 per cent. with equal division of surplus profits over 5 per cent. in both cases. At last the requirements of the market were met, and there has since been a mild boom in feeder railway construction and the stock of all the sound companies promoted stands at a substantial premium.

Railway Profits Commence.

Meantime a much more important change was in progress. The gradual economic development of the country vastly increased the traffic, both passenger and goods. The falling in of the original contracts allowed Government to renew them on more favourable terms. The development of irrigation in the Punjab and Sind transformed the North-Western State Railway. Owing to the burden of maintaining the unprofitable Frontier lines, this was the Cinderella Railway in India—the scapegoat of the critics who protested against the un wisdom of constructing railways from borrowed capital. But with the completion of the Chenab and Jhelum Canals, the North-Western became one of the great grain lines of the world, choked with traffic at certain seasons of the year and making a large profit for the State. In 1900 the railways for the first time showed a small gain to the State. In succeeding years the net receipts grew rapidly. In the four years ended 1907-08 they averaged close upon £2 millions a year. In the following year there was a relapse. Bad harvests in India, accompanied by the monetary panic caused by the American financial crisis, led to a great falling off in receipts just when working expenses were rising, owing to the general increase in prices. Instead of a profit, there was a deficit of £1,240,000 in the railway accounts for 1908-09. But in the following year there was a reversion to a profit, and the net Railway gain has steadily increased. For the year ended March 1919 this gain amounted to £10,858,379. Although in a country like India, where the finances are mainly dependent upon the character of the monsoon, the railway revenue must fluctuate, there is no reason to anticipate a further deficit, but every ground for hoping that the railway profits will fill the vacuum in the Indian revenues caused by the cessation of the opium trade with China.

Contracts Revised.

A very important factor in this changed position is the revision of the original contracts under which the guaranteed lines were constructed. The five per cent. dividend, guaranteed at 22½ rupee, and the half-yearly settlements made these companies a drain on the State at a time when their stock was at a high premium. The first contract

to fall in was the East Indian; the great line connecting Calcutta with Delhi and the Northern provinces. When the contract lapsed, the Government exercised their right of purchasing the line, paying the purchase-money in the form of terminable annuities, derived from revenue, carrying with them a sinking fund for the redemption of capital. The railway thus became a State line; but it was released to the Company which actually works it. Under these new conditions the East Indian Company brought to the State in the ten years ended 1909 after meeting all charges, including the payments on account of the terminable annuity by means of which the purchase of the line was made, and interest on all capital outlay subsequent to the date of purchase, a clear profit of nearly ten millions. At the end of seventy-four years from 1880, when the annuity expires, the Government will come into receipt of a clear yearly income of upwards of £2,700,000, equivalent to the creation of a capital of sixty to seventy millions sterling. No other railway shows results quite equal to the East Indian, because, in addition to serving a rich country by an easy line, it possesses its own collieries and enjoys cheap coal. But with allowance for these factors, all the other guaranteed companies which have been acquired under similar conditions as their contracts expired, have proportionately swelled the revenue and assets of the State. It is difficult to estimate the amount which must be added to the capital debt of the Indian railways in order to counterbalance the loss during the period when the revenue did not meet the interest charges. According to one estimate it should be £50 millions. But even if that figure be taken Government have a magnificent asset in their railway property.

Improving Open Lines.

These changes induced a corresponding change in Indian Railway policy. Up to 1900 the great work had been the provision of trunk lines. But with the completion of the Nagda-Mutta line, providing an alternative broad gauge route from Bombay to Delhi through Eastern Rajputana, the trunk system was virtually complete. A direct broad gauge route from Bombay to Sind is needed, but chiefly for strategic purposes. The poor commercial prospects of the line and the opposition of the Rao of Cutch to any through line in his territories, keep this scheme in the background. There does not exist any through rail connection between India and Burma, although several routes have been surveyed: the mountainous character of the region to be traversed, and the easy means of communication with Burma by sea, rob this scheme of any living importance. Further Survey work was undertaken in November 1914, the three routes to be surveyed being the coast route, the Manipur route, and the Hukong valley route. The metre gauge systems of Northern and Southern India must also be connected and Karachi given direct broad-gauge connection with Delhi, a project that is now under investigation. But these works are subordinate to the necessity for bringing the open lines up to their traffic requirements and providing them with feeders. The sudden

increase in the trade of India found the main lines totally unprepared. Costly works were necessary to double lines, improve the equipment, provide new and better yards and terminal facilities and to increase the rolling stock. Consequently the demands on the open lines have altogether overshadowed the provision of new lines. Even then the railway budget was found totally inadequate for the purpose, and a small Committee sat in London, under the chairmanship of Lord Inchcape, to consider ways and means. This Committee found that the amount which could be remuneratively spent on railway construction in India was limited only by the capacity of the money market. They fixed the annual allotment at £12,000,000 a year. Even this reduced sum cannot always be provided.

Government Control.

As the original contracts carried a definite Government guarantee of interest, it was necessary for Government to exercise strong supervision and control over the expenditure during construction, and over management and expenditure after the lines were open for traffic. For these purposes a staff of Consulting Engineers was formed, and a whole system of checks and counterchecks established, leading up to the Railway Branch of the Public Works Department of the Government of India. As traffic developed, the Indian Railways outgrew this dry nursing, and when the original contracts expired, and the interests of Government and the Companies synchronised, it became not only vexatious but unnecessary. Accordingly in 1901-02 Mr. Thomas Robertson was deputed by the Secretary of State to examine the whole question of the organisation and working of the Indian Railways, and he recommended that the existing system should be replaced by a Railway Board, consisting of a Chairman and two members with a Secretary. The Board was formally constituted in March 1905. The Board is outside, but subordinate to the Government of India in which it is represented by the Department of Commerce and Industry. It prepares the railway programme of expenditure and considers the greater questions of policy and economy affecting all the lines. Its administrative duties include the construction of new lines by State agency, the carrying out of new works on open lines, the improvement of railway management with regard both to economy and public convenience, the arrangements for through traffic, the settlement of disputes between lines, the control and promotion of the staff on State lines, and the general supervision over the working and expenditure of the Company's lines. Two minor changes have taken place since the constitution of the Railway Board. In 1908, to meet the complaint that the Board was subjected to excessive control by the Department of Commerce and Industry, the powers of the Chairman were increased and he was given the status of a Secretary to Government with the right of independent access to the Viceroy; he usually sits in the Imperial Legislative Council as the representative of the Railway interest. In 1912 in consequence of complaints of the excessive interference of the

Board with the Companies, an informal mission was undertaken by Lord Inchcape to reconcile differences. The constitution of the Board is now undergoing further inquiry, and the development generally favoured in the establishment of a Railway Member of the Viceroy's Executive Council.

Management.

The Railways managed by Companies have Boards of Directors in London. They are represented in India by an Agent, who has under him a Traffic Manager, a Chief Engineer, a Locomotive Superintendent, a Storekeeper, a Police Superintendent, (who is appointed by Government), and an Auditor. The State Railways are similarly organised.

Clearing House.

Proposals have several times been made for the establishment of a Clearing House but the distances are too great. The work which would ordinarily be done by the Clearing House is done by the Audit Office of each Railway.

The Railway Conference.

In order to facilitate the adjustment of domestic questions, the Railway Conference was instituted in 1876. This Conference was consolidated into a permanent body in 1903 under the title of the Indian Railway Conference Association. It is under the direct control of the railways, it elects a President from amongst the members, and it has done much useful work.

The Indian Gauges.

The standard gauge for India is five feet six inches. When construction was started the broad gauge school was strong, and it was thought advisable to have a broad gauge in order to resist the influence of cyclones. But in 1870, when the State system was adopted it was decided to find a more economical gauge, for the open lines had cost £17,000 a mile. After much deliberation, the metre gauge of 3 feet 3½ inches was adopted, because at that time the idea of adopting the metric system for India was in the air. The original intention was to make the metre gauge lines provisional; they were to be converted into broad gauge as soon as the traffic justified it; consequently they were built very light. But the traffic expanded with surprising rapidity, and it was found cheaper to improve the carrying power of the metre gauge lines than to convert them to the broad gauge. So, except in the Indus Valley, where the strategic situation demanded an unbroken gauge, the metre gauge lines were improved and they become a permanent feature in the railway system. Now there is a great metre gauge system north of the Ganges connected with the Rajputana lines and Kathiawar. Another system in Southern India embracing the Southern Maratha and the South India Systems. These are not yet connected, but the necessary link from Khandwa by way of the Nizam's Hyderabad-Godavari Railway, cannot be long delayed. All the Burma lines are on the metre gauge. Since the opening of the Barul line, illustrating the capacity of the two feet six inch gauge; there has been developed a tendency to construct feeders on this rather than on the metre gauge.

The following statement brings out the more important features of the operation of Indian railways during the year 1922-23 together with similar information for the year 1921-22 :—

<i>Mileage open on the 31st March—</i>	1922-23.	1921-22.
1. Single line	34,453.07	34,201.89
2. Double line or more	3,164.84	3,063.78
3. Total route mileage	37,617.91	37,265.67
4. Total track mileage	50,219.74	49,498.73

Capital and Revenue Earnings and Expenditure—

5. Total capital outlay including ferries and suspense on open line Rs.	6,69,39,19,000	6,47,97,17,000
6. Gross earnings „	1,05,65,19,000	92,88,67,000
7. Gross earnings per train mile	6.44	5.85
8. Working expenses „	72,00,49,000	70,79,95,000
9. Working expenses per train mile „	4.45	4.46
10. Net earnings „	32,65,70,000	22,08,72,000
11. Percentage of working expenses to gross earnings.	69.09	76.22
12. Percentage of net earnings on total capital outlay.	4.88	3.41

Equipment—

13. Locomotives	9,740	9,673
14. Passenger carriages	*19,663	*18,934
15. Other passenger vehicles	*5,032	*5,315
16. Goods stock	†209,134	†203,796

Passenger Traffic—

17. Number of passengers carried	572,695,400	569,084,300
18. Passenger miles	18,923,943,000	19,803,613,000
19. Average journey Miles.	33.04	34.77
20. Earnings from passengers carried Rs.	37,59,22,000	34,29,32,000
21. Average rate charged per passenger per mile Pies.	3.81	3.32
22. Total coaching earnings Rs.	43,82,67,000	40,33,63,000

Goods Traffic—

23. Number of tons carried	93,704,000	90,142,000
24. Net ton miles	18,324,825,000	17,712,901,000
25. Average haul	195.56	196.50
26. Earnings from tonnage carried Rs.	57,87,55,000	49,05,81,000
27. Average rate charged for carrying a ton of goods one mile Pies.	6.11	5.37
28. Total goods earnings	58,30,04,000	49,52,81,000

<i>Number of employees</i>	753,472	739,846
------------------------------------	---------	---------

At the close of the year 1922-23 the total capital invested in railways was Rupees 6,69,39,19,000 represented by a property which in terms of route mileage amounted to 37,618 miles of railway. This property brought in to the owners a return of 4.88 per cent. on the

* Excluding departmental vehicles.

† Excluding Railway service wagons.

capital outlay. Similar figures for the railways owned by the State are:—

	Rs.
Total capital outlay ..	5,93,53,35,000
Total route mileage ..	27,005
Return on capital outlay	4.54

After providing for interest, annuity and other similar charges the working of the State-owned railways resulted in a net gain of Rs. 1,21,99,000 as compared with a net deficit of Rs. 9,27,80,000 in the previous year. This result was largely due to enhancements of rates and fares brought into force during the year, the average rate charged for carrying a passenger one mile having risen from 3.32 pias to 3.81 pias and the average rate for carrying a ton of goods from 5.37 pias to 6.11 pias.

Railway Board Reorganised.—The machinery by which the Government of India controls the railways of the country has been frequently under review in the past. The basis of the present system was evolved in 1904 as a result of the investigations of Mr. Robertson and the Railway Board was established in the following year. Some of the difficulties involved in the constitution of a controlling authority for the railways of India may be realised from a study of the "Notes on the Relation of the Government to Railways in India" printed as an appendix to the latest Railway Administration report. These notes bring out the great diversity of conditions prevailing which involve the Railway Department in the exercise of the functions of—

(a) the directly controlling authority of the three State-worked systems aggregating 9,028 miles,

(b) the representative of the predominant owning partner in systems aggregating 22,949 miles,

(c) the guarantor of many of the smaller companies, and

(d) the statutory authority over all railways in India.

Moreover in all questions relating to railways or extra municipal tramways in which Provincial Governments are concerned, the Railway Department is called upon to watch the interests of the Central Government and is frequently asked to advise the Local Governments. Its duties do not end there. The future development of railways depends largely on the Government of India and the Railway Department is therefore called upon to plan out schemes of development, to investigate and survey new lines and to arrange for financing their construction. The statement of the varied responsibilities of the Government of India in regard to railways might be extended almost indefinitely. It will perhaps be sufficient to mention only the complications that may and do arise owing to the very considerable railway mileage in Indian States. In the exercise of all these functions the Railway Department is a Department of the Government of India. Its policy must be in accord with the policy of the Government as a whole and every decision must be made with that consideration in mind. The evolution of a satisfactory authority for the administration of these varied

functions has proved extremely difficult and the question was one of those referred to the Railway Committee (1920-21) presided over by Sir William Acworth who expressed the unanimous opinion that material changes were necessary in the constitution of the Railway Board. Amongst their recommendations they advised the early appointment of a Chief Commissioner of Railways whose first duty should be to prepare a definite scheme for the reorganisation of the Railway Department.

The principal constitutional change involved in this appointment is that the Chief Commissioner who takes the place of the President of the Railway Board is solely responsible—under the Government of India—for arriving at decisions on technical matters and for advising the Government of India on matters of railway policy and is not, as was the President, subject to be out-voted and over-ruled by his colleagues on the Board. The detailed re-organisation of the Railway Board in accordance with the Chief Commissioner's proposals was under the consideration of Government at the close of the year, but one of the most important of his recommendations namely the appointment of a Financial Commissioner was considered of particular urgency and the Secretary of State's sanction was therefore obtained to the appointment of Mr. G. G. Sim, C.I.E., I.C.S., who joined the Board on April 1st, 1923. While in the person of the Chief Engineer the Railway Board has always had available the technical advice of a senior Civil Engineer in Mechanical Engineering questions it has had to depend on outside assistance. The disadvantages of this arrangement have become increasingly evident and it was therefore decided with effect from November 1st, 1922, to create the new appointment of Chief Mechanical Engineer with the Railway Board.

State versus Company Management.—

The relative advantages and disadvantages of State and Company management of the railways owned by Government which comprise the great bulk of the railway mileage in India have been the subject of discussion in official circles and the public press for many years. In India the question is complicated by the fact that the more important companies have not in recent years been the owners of the railways which they manage and the headquarters of their Boards are in London. The subject was one, perhaps the most important, of the terms of reference of the Acworth Railway Committee. That Committee was, unfortunately, unable to make a unanimous recommendation on this point, their members being equally divided in favour of State management and Company management. They were, however, unanimous in recommending that the present system of management by Boards of Directors in London should not be extended beyond the terms of the existing contracts and this recommendation has met with general public acceptance. During the year 1922-23, the question was again referred to certain Local Governments and public bodies and opinions collected and discussed. The approaching termination of the East Indian Railway contract on 31st December 1924 and of that of the Great Indian Peninsula Railway on 30th June 1925 rendered an early decision on this question imperative. When the question was debated in

the Legislative Assembly in February 1923, the non-official Indian Members were almost unanimously in favour of State management and indeed were able to carry a resolution recommending the placing of the East Indian Railway and the Great Indian Peninsula Railway under State management at the close of their present contracts. The Government of India, however, expressed themselves as being so convinced by the almost universal failure of this method in other countries that they proposed, while accepting the necessity for taking over the management of the East Indian Railway and the Great Indian Peninsula Railway to confine their efforts to devise a satisfactory form of Company domiciled in India to take these railways over eventually on a basis of real Company management. The position at the close of the year under review was that arrangements had been instituted for bringing both these railways under State management at the termination of their contracts.

Re-organisation problems.—The growing complexity of railway administration in India and the evolution of new methods of controlling traffic have given a stimulus to the efforts of various railways to revise their organisations. The general direction in which this re-organisation is being considered is that of consolidation into one department the operating or transportation work of the railway, including the provision of power. The advisability of adopting the divisional system in place of the present rather highly centralised departmental system has also been receiving attention.

On the Great Indian Peninsula Railway, re-organisation has taken place during the year the details of which are as follows—

- (a) the separation of the commercial and operative duties of the Traffic Department,
- (b) the separation of the mechanical and running duties of the Locomotive Department,
- (c) the fusion of the operative duties of the Traffic Department with the running duties of the Locomotive Department.

Under the new organisation there is now—

- (1) a Chief Transportation Superintendent in charge of all operating functions,
- (2) a Chief Traffic Manager in charge of the commercial side of the railway,
- (3) a Chief Mechanical Engineer in charge of the design and construction of engines and of all repairs and renewals of engines carried out in the central workshops.

This organisation is more or less similar to the divisional organisation found on most American Railways with the exception that the Engineering Department still works on a departmental basis.

Revision of Railway statistics.—A Committee consisting of one officer from the Traffic Department and one from the Audit Department of the North Western Railway was appointed in October 1922 to suggest alterations in the existing administrative statistics furnished by railways to the Railway Board and to bring them into line with present up-to-date practice. For many years after the first

railways were opened, such statistics as were produced were primarily directed towards showing the return on capital invested, although commodity statistics were also prepared to some extent for trade purposes. It was only when comparisons between different railway systems came to be a matter of interest that statistics of actual working were found to be necessary and even then the tabulation and examination of these figures were directed primarily towards ascertaining the ultimate cost of transportation as a marketable commodity. The introduction of scientific methods of railway working in recent years, however, has shown that properly prepared statistics form a most valuable portion of the machinery whereby the railway management is able to improve efficiency in the details of working and effect economies in working costs.

The existing statistics are based on the report of a Committee which sat in 1880 to revise the form of the statistics. Considerable changes have been introduced since then, and certain individual railway administrations have made considerable progress in the introduction of modern railway statistics, but the Acworth Committee which sat in 1921 criticised the figures prepared and used for the purposes of the Railway Board as being out of date and not in conformity with present-day practice.

The main changes recommended by the Committee of 1922 and accepted by the Railway Board are :—

- (1) The introduction of monthly statistics in addition to the yearly statistics at present furnished to the Railway Board.
- (2) The classification of railways under three classes for statistical purposes.

The former change will ensure the supply of up-to-date information of the working of railways to the Railway Board and will enable railways to compare their own working with that of other railways month by month as is done in England and America. The second change will relieve the smaller railways of the necessity for compiling the detailed statistics which larger railways have to prepare.

The total capital expenditure incurred on all railways, including those under construction, in India up to the end of March 1923 amounted to Rs. 680·23 crores of which Rs. 602·95 crores represented outlay on the State-owned railways inclusive of premia paid in the purchase of Companies' lines, the balance having been provided by Indian States, Companies and District Boards.

The actual liability incurred by Government in regard to State-owned railways may be stated at Rs. 633·49 crores at end of 1922-23.

The outlay during the year 1922-23 was Rs. 22·58 crores, of which Rs. 18·86 crores represented expenditure incurred on State-owned lines.

Capital Programme.—The Government of India has decided definitely to provide the sum of Rs. 150 crores for expenditure on the rehabilitation of railways during the quinquennium commencing with 1922-23. The programme of works on which that sum was based was prepared in 1921 at a time when prices of materials were still high and unstable. Moreover

the position of the general Revenues of India rendered impossible the provision of the full amount, chargeable to revenue expenditure, which the capital programme involved. These conditions coupled with the fact that 1922-23 was the first year of the quinquennium and many of the larger works were therefore in the preliminary stages explain why less than 2-3rds of the annual quota of the Rs. 150 crores were actually expended. The original programme provided for a general increase in facilities which had long been recognised as essential if the railways were to render a reasonably efficient service. While many of these works would certainly give an adequate and immediate return, in the case of others it was found difficult without further examination to justify the proposed expenditure. In March 1923 the report of the Incheape Committee was received. In dealing with the capital programme that Committee recommended that, except in the case of commitments already entered upon, no further capital expenditure should be incurred on certain lines classed by the Committee as unremunerative, until the whole position has been examined by the Finan-

cial Adviser and reviewed by Government. And further that if the full amount of the capital could not be immediately employed on remunerative works on open lines, it would be a matter for consideration whether some portion of it could not with advantage be devoted to the construction of new lines promising an adequate return. In view of these recommendations it was decided that the capital expenditure proposed for 1923-24 must be re-examined and that as regards the years 1924-25 to 1926-27 the whole programme must be recast. The re-examination is now being actively undertaken.

Trade review.—The earnings of railways are dependent on the general prosperity of the country which in the case of India is most easily measured by the agricultural position and the returns of foreign trade. Judged by the usual criteria, conditions were favourable in 1922-23 for an exceptionally good year for the railways. The actual results, however, fell in some respects short of what might have been expected. The following statement shows in detail by commodities the traffic lifted during the last two years:

Commodity.	1921-22.		1922-23.	
	Tons originating on Home line in Millions.	Rs. in crores.	Tons originating on Home line in Millions.	Rs. in crores.
(1) Coal	13.75	7.30	14.97	8.53
(2) Railway stores	20.01	2.78	20.60	3.00
(3) Wheat and wheat flour	1.53	1.83	1.63	2.37
(4) Rice	3.91	3.37	3.95	3.76
(5) Other grains	3.36	4.21	2.82	3.75
(6) Stone	2.28	0.69	2.10	0.77
(7) Metals	2.18	2.10	2.89	3.29
(8) Salt	1.39	1.61	1.57	2.10
(9) Wood	1.86	1.12	1.82	1.30
(10) Sugar	1.42	2.52	1.33	2.45
(11) Oils and oil seeds	2.07	3.10	3.12	5.31
(12) Cotton and yarn	1.46	4.81	1.60	5.96
(13) Lime, chalk, etc.	1.12	0.40	1.15	0.48
(14) Jute and gunny bags96	1.29	.98	1.54
(15) Fodder98	0.80	.75	0.58
(16) Other Commodities	5.25	11.59	8.74	13.11
Total	63.53	49.52	70.11	58.30

It will be noticed that of a total increase of 6½ million tons something over half occurred in various minor commodities not separately detailed and of the rest the only important increases occurred in oils and coal.

Enhancement of rates and fares.—With a view to obtaining an increase in the general revenues a surcharge was imposed on railway traffic in 1917 and enhanced in 1921. The determination of railway rates and fares is a very intricate business requiring careful consideration of local conditions and of the rates which a particular traffic will bear. The complete readjustment of rates and fares involves, therefore, considerable delay and it was largely for this reason that the surcharge remained in force up to the close of 1921-22 when it was replaced by a

general enhancement of rates and fares, which were brought into force from different dates on the various railway systems. This enhancement differed materially from the surcharge. The control of the Railway Board over rates and fares consists in the imposition of maxima and minima between which individual administrations are generally speaking at liberty to vary their rates. With effect from 1st April 1922, these maxima were increased in the case of passenger fares by from 25 to 33 per cent. and of goods rates by from 15 to 25 per cent. These increases did not necessarily mean that all railways raised all or any of their rates and fares by these percentages. It is not yet possible to say to what extent this revision of rates and fares in replacement of the surcharge has affected

Additions to Equipment.

777

the volume of traffic. The position is being closely watched by all railway administrations from a business point of view with the object of arriving as nearly as possible at such rates and fares as will result in the maximum of net receipts.

Passenger earnings increased by about 9½

per cent. and represented approximately 80 per cent. of the total earnings.

The working expenses—for all railways rose from Rs. 70·80 crores in 1921-22 to Rs. 72·00 crores in 1922-23. The summary belows shows the distribution of this expenditure between the various departments:—

Department.	Work.	Amount spent in	
		1922-23.	1921-22.
Engineering	Maintenance of way, works and stations ..	Rs. in crores. 14·54	Rs. in crores. 14·33
Locomotive	Maintenance and renewing of engines and cost of fuel and running stores and other expenses attached to provision of motive power	25·47	25·42
Carriage and Wagon ..	Maintenance and running of carriages and wagons	9·85	9·39
Traffic	Working of trains from a business standpoint, i.e., booking of passengers and goods and arrangements for transport	11·58	11·24
Agency and others ..	Agent's office expenses, Audit, Stores, Medical and Police charges, etc.	5·64	5·16
Ferry	Steam boat expenses	·35	·34
Miscellaneous	Law charges, compensation, contribution to Provident Fund, etc.	5·56	4·02
Total ..		72·00	70·80

The figures under Engineering, Locomotive and Carriage and Wagon comprise not only the ordinary cost of maintenance and working of the line and equipment in these departments but also the proportion of the expenditure on betterments and replacements which is debited to Revenue. The ordinary expenditure on the ten principal railways shows decreases of Rs. 48 lakhs under Engineering, Rs. 13 lakhs under Locomotive and Rs. 23 lakhs under Carriage and Wagon coupled with increased Revenue expenditure on betterments and replacements of Rs. 69 lakhs under Engineering and Rs. 64 lakhs under Carriage and Wagon. The figures quoted indicate that so far as these departments are concerned, the cost of the ordinary working was somewhat less than in the previous year and that in the Engineering and Carriage and Wagon Departments some advance was made in replacing worn-out and obsolete equipment..

Open Mileage—The total route mileage on March 31st, 1923, was 37,617·91 made up of—
5' 6" gauge 18,389·30 miles.
Metre gauge 15,507·65 ..
Narrow gauge 3,720·96 ..

Under the new classification adopted for statistical purposes, this mileage is divided between the three classes of railways as follows:—

Class I	34,332·09 Miles = 91½ per cent.
Class II	1,710·34 " = 4½ "
Class III	1,575·48 " = 4¼ "

Class I includes all the 5' 6" gauge mileage 14,014·35 or about 90 per cent. of the metre-gauge and 1928·44 or 52 per cent. of the narrow-gauges.

The State-owned 27,005·27 miles or about 72 per cent. and directly managed 7,678·59 miles or 20 per cent. of the total.

During the year 1922-23 381·69 miles of new lines were opened for public traffic. Of this mileage 192·90 miles belong to Class I, 60·18 miles to Class II and 122·61 miles to Class III railways.

Programme of Future Construction.—The continued fall in the prices of railway materials coupled with the insistence by the Railway Board of more adequate financial justification of the proposals of railway administrations have resulted in making it improbable that the whole of the Rs. 150 crores originally provided for rehabilitation could be economically expended on open line works alone within the period originally intended. This in conjunction with the somewhat more favourable terms on which money can now be obtained has led to a careful reconsideration of the position regarding new railway construction. While no final decision was arrived at, steps have been taken to push on with the investigation of the more important projects. The investigations of railway requirements in Southern India were completed and, as a result of these, a Traffic Survey of the important Villupuram-Trichinopoly-Chord line was carried out. Good progress was also made with the Central Indian Coal Fields Survey.

Of the lines dismantled to provide material required in theatres of war, approximately 262 miles of those which it is proposed to restore remained unplaced at the close of the financial year.

Additions to Equipment.—Statements No. V—Statement of Equipment—and No. VI—Statement of net additions to Equipment—summarise the equipment and the net additions to equipment during 1922-23 on Indian Railways. Statements Nos. 6 and 18 give this information in more detail for individual lines.

It will be seen that on Class I railways there were additions of 49 and 11 Broad and Metro-gauge Locomotives bringing the respective totals up to 6,306 and 2,650.

In the case of passenger vehicles on Class I railways net additions of 141 to the stock of broad gauge vehicles brought the total up to 9,854 and similar figures for the metre gauge were net additions 271 and total 7,450. The following table shows these total figures comprise in seating accommodation under the four classes :

Class I Railways.	Number of seats in passenger carriages.			
	1st.	2nd.	Inter.	Thrid.
5' 6" ..	21,278	39,345	45,755	536,959
3' 3½" ..	9,633	12,627	9,656	306,037

The additions to the goods stock of Class I railways were 1,645 covered and 2,440 open broad gauge and 1,171 covered and 86 open metre gauge wagons.

In 1921-22, the net addition to the stock of broad gauge engines was 199 as compared with 49 in 1922-23. The lower figure in the last year is accounted for as follows. In the year 1918-19 it was anticipated that the close of the war would be followed by a great increase in trade activity which, coupled with the arrears into which the supply of engines had of necessity fallen during the war, would result in the need for a very large increase in power. Orders were, therefore, placed for engines to meet this demand, but owing to labour troubles in England deliveries were delayed until 1920-21 and 1921-22. In these two years a total of 442 broad gauge engines were brought into use. During 1921-22 the position was reviewed with the result that, in view of the failure of traffic to come up to expectations, it was necessary to slow down very considerably the process of increasing the stock of engines.

Purchase of Rolling Stock.—The following table shows the value of rolling stock purchased by Indian Railways in 1922-23 :—

	Value of imported materials.			Value of indigenous materials.	Total purchases, 1922-23.	Total purchases, 1921-22.
	Purchased direct.	Purchased through Indian firms.	Total imported materials.			
	Rs. crores.	Rs. crores.	Rs. crores.	Rs. crores.	Rs. crores.	Rs. crores.
Locomotive and spare parts	3.53	.08	3.61	.06	3.67	6.14
Coaching stock ..	.50	.02	.52	.14	.66	.56
Goods stock	1.35	.04	1.39	.21	1.60	3.45
Spare parts, coaching and goods stock	3.89	.46	4.35	.16	4.51	5.00
Motor cars01	.02	.03	..	.03	.04
Total ..	9.28	.62	9.90	.57	10.47	15.19

Without going into details beyond the scope of this report, it is impossible to connect these figures with the number of locomotives and rolling stock brought into use during the year. The expenditure on locomotives, etc., besides including the cost of spare parts for repairs represents payments for f.o.b. deliveries at foreign ports of engines which at the close of the year may have been still at sea or under erection in India. In the case of wagon contracts too the position is complicated. It has, for example, the practice in the case of wagons purchased in India to make advance payments for raw material when received by the contractors.

In regard to Locomotives and Rolling-stock the year 1922-23 has been marked by a very considerable further fall in prices. The highest prices since the war were recorded in the middle of 1920. In February 1923 orders were placed for standard 0-6-0 Superheated Engines at £4,041 as compared with £11,000 in 1920 and £3,910 before the War. Standard covered goods wagons were ordered at £250 as against £750 in 1920 and £210 before the War.

Financial Results of Working.—The total gross earnings of all railways in India during the year 1922-23 amounted to Rs. 105.65 crores as compared with 92.89 crores in 1921-22. These

Financial Results of Working.

779

figures, however include railways owned by Indian States and companies for which the Govt. of India has no direct financial responsibility.

The figures of receipts and expenditure for railways with which the Government are directly concerned are as follows:—

	Rs.
Traffic receipts from Government Railways	93,22,14,218
Government share of surplus profits from subsidised companies' railways ..	26,40,884
Total ..	93,48,55,102
Rs.	
Working Expenses	65,90,16,125
Surplus Profits paid to Companies	60,40,501
Interest on Government debt	16,34,47,349
Interest on Capital contributed by Companies	3,55,55,612
Annuities in purchase of railways	5,13,39,387
Sinking Funds	47,13,837
Land and subsidy to Companies	9,43,460
Miscellaneous	20,99,602
Total charges ..	92,26,55,873
Net gain ..	1,21,99,229

After meeting all interest and annuity charges Government therefore received a net profit of 1.22 crores as against a loss of 0.27 crores in 1921-22. The figures in the previous administration reports showing the percentage of return on capital at charge were worked out on a total capital representing the total capital expenditure *plus* the premia paid to companies; it did not represent the capital actually raised by the State in order to acquire railways from companies. On the actual Capital so raised the net receipts that is the gross receipts *minus* the working expenses have in recent years given the following return:—

	Per cent.
1913-14	5.01
1918-19	6.77
1919-20	5.62
1920-21	4.23
1921-22	2.47
1922-23	4.37

Up to date figures of the results of working of other countries are not available, but the following table compares the latest available figures of average receipts per ton mile of those

countries which have published statistics of working later than 1919:—

	Receipts per ton mile Pies.
United States of America, 1921	6.77
United Kingdom, 1921	25.0
Sweden, 1920	28.0
Norway, 1921	32.0
Switzerland, 1920	36.0
New South Wales, 1922	17.0
South Australia, 1921	21.7
Japan, 1921	6.2
Canada, 1921	7.3
India, 1922-23	6.1

In the case of receipts per passenger mile the figures for United States of America and India are as follows:—

United States of America, 1921.	18.7 pies
India, 1922-23	3.8 "

while in England the present fare charged per mile third class is 18 pies.
From the above it will be seen that railway transportation of freight in India is probably the cheapest in the world and still more so in the case of passenger traffic.

An examination of the latest available figures of operating ratios of foreign countries brings out results not unfavourable to Indian Railways.

	Year.	Operating Ratio.
United States of America	1921	100.47 per cent.
France—State Lines only	1922	115 " "
All Lines	1922	89 " "
15 English Railways	1922	80.6 " "
Tasmanian Railways	1921-22	91.46 " "
South African Railways	1921-22	82.7 " "
Argentine Railways	1921-22	74.34 to 85.20 " "
	1921-22	76.22 " "
India	1922-23	69.09 " "

Value of Railway Materials Purchased.—The value of materials purchased by Indian railways in 1922-23 (excluding coal, coke, stone, bricks, lime, ballast, etc.) showed the considerable decrease of Rs. 7.75 crores as compared with the value of materials purchased in 1921-22.

	Value of imported materials.			Value of indigenous materials.	Total purchases, 1922-23.	Total purchases, 1921-22.
	Purchased direct.	Purchased through Agents in India.	Total imported materials.			
	Rs. crores.	Rs. crores.	Rs. crores.	Rs. crores.	Rs. crores.	Rs. crores.
Rolling stock	9.28	8.2	9.90	5.7	10.47	15.19
Tools and stores	2.65	3.57	6.22	3.91	10.13	13.34
Permanent-way	2.77	.25	3.03	4.51	7.54	6.54
Electrical plant57	.28	.85	.01	.86	.95
Buildings and station materials and fencing ..	.24	.21	.45	.13	.58	.62
Bridge work50	.01	.51	.02	.53	.96
Workshop machinery ..	.40	.11	.51	.01	.52	.66
Engineer's plant15	.08	.22	.01	.23	.24
Total ..	16.56	5.13	21.69	9.17	30.86	38.61

Railway Collieries.—Steps were taken during 1922-23 to increase the facilities of existing collieries owned by railways and to enable further properties to be acquired. Estimates have been sanctioned for the electrification of the Kargall Colliery of the Great Indian Peninsula Railway and for the acquisition and equipment of a colliery in the Bokharo-Ramgarh area for the Madras and Southern Mahratta and Bombay, Baroda and Central India Railways. Progress has also been made with the investigation of collieries for several railways in the Karanpura, Bokharo-Ramgarh and Talchir Coalfields. The output of the Railway owned collieries during 1922-23 was 1,628,034 tons out of a total of 6,186,370 tons consumed on Railways. The cost of raising compares very favourably with the market price and these collieries afford a regular and assured supply independent of market variations which is a great asset to those Railways which draw the supplies from their own collieries.

Stores Balances.—The value of stores held by the Railways at the close of 1922-23 was over 20 crores of rupees or nearly double the figure for the year 1913-14. The increase is largely due to the rise in prices, but also to certain difficulties connected with the purchase of stores at the close of the war period. The Railway Board took up the question of reducing these balances as far as possible and a close examination was made of their stocks with a view to determine the best means by which reductions could be effected. The large amount of capital locked up in stores was very unfavourably commented on by the Retrenchment Committee.

In connection with the decision of Government to spend the sum of Rs. 150 crores on capital rehabilitation and improvement during the quinquennium 1922-23—1926-27, there has been a widely expressed and natural desire that as much

as possible of this sum should be spent in India. As recommended by the Legislative Assembly in a resolution adopted on March 2nd, 1922, a Railway Industries Committee was appointed to advise the Government of India as to the steps to be taken to encourage the establishment of the necessary industries and further to advise the Government of India in regard to the revision of Indian Stores Rules.

Number of Staff.—The total number of railway employees at the end of the financial year 1922-23 was 753,472 as compared with 759,846 for the previous year. This is a decrease of 6,374 in number in spite of an increase in mileage of 352.24 miles during the year. Of the 753,472 railway employees, 6,880 were Europeans, 12,201 Anglo-Indians and 734,391 Indians. Similar figures for 1913-14 were Europeans 7,986, Anglo-Indians 10,437 and Indians 614,882 which make up a total of 633,305.

The position regarding the more extended employment of Indians in the higher grades of railway service was reviewed in considerable detail in the Administration Report for 1921-22. Throughout the year 1922-23 the public interest in this question has been maintained, finding voice in the press and by interpellations in the Legislature. The Government of India have throughout maintained the attitude that every reasonable means should be adopted to increase the number of Indians in the higher grades in so far as such increase is consistent with efficiency and economy. In a resolution adopted in the Legislative Assembly in February 1923, particular attention was directed to the case of Traffic Inspectors and Railway Administrations have been called upon to make special endeavours to recruit and train Indians with a view to their becoming qualified for advancement to these posts. Railway administrations have also been instructed to bear in mind the policy recom-

mended by the Assembly that the claims of all communities and provinces should be considered in recruiting for posts under their control. On the State-worked railways the figures for 1922-23 show a considerable advance as regards officers, Indians comprising 24 per cent. of the Engineer (officers), 29 per cent. of the Superior Traffic and 15 per cent. of the Superior Stores Establishments as compared with percentages of 20, 25

and 8 respectively for 1921-22.

Fatalities and Injuries.—During 1922-23, there was a decrease of 565 in the total number of persons killed and 139 in the number injured as compared with the figures for 1921-22. The following table shows the numbers killed and injured separately under passengers, railway servants and others for 1922-23 as compared with 1921-22 :—

	Killed.		Injured.	
	1922-23.	1921-22.	1922-23.	1921-22.
A. Passengers—				
(1) Accidents to trains, rolling-stock, permanent-way, etc.	30	181	154	228
(2) Accidents caused by the movement of vehicles used exclusively on railways	364	455	1,170	1,209
(3) Accidents on Railway premises not due to Train accidents or to the movement of vehicles	11	92	44	42
B. Servants—				
(1) Accidents to trains, rolling stock, permanent-way, etc.	30	28	125	134
(2) Accidents caused by the movement of vehicles used exclusively on railways	345	417	671	739
(3) Accidents on Railway premises not due to Train accidents or to the movement of vehicles	47	58	554	457
C. Others—				
(1) Accidents to trains, rolling-stock, permanent-way, etc.	17	18	24	32
(2) Accidents caused by the movement of vehicles used exclusively on railways	1,890	2,040	712	669
(3) Accidents on Railway premises not due to Train accidents or to the movement of vehicles	6	16	15	
Total	2,740	3,305	3,469	3,608

In this statement the figures include the number of persons killed and injured by accidents on Railway premises of due to train accidents or to the movements of vehicles whereas in the figures quoted in the 1921-22 report these were excluded. This explains the difference of 184 in the total number of persons shown as killed and of 539 in the total number of persons shown as injured during 1921-22. Out of the total of 2,740 persons killed, 1,852 or over 67 per cent. were trespassers on railway property. Of the remaining 888 persons killed, 405 were passengers and of these only 30 were killed in accidents to trains, rolling stock, permanent way, etc. As approximately 572,000,000 passengers were carried during 1922-23, the chance of any passenger being killed in accident to a train, rolling stock or permanent-way is less than 1 in 10 millions and of being injured less than 1 in 3 millions.

Local advisory Committees.—During 1922-23 the views of railway administrations were obtained, rules were drafted and were discussed at a meeting of the Central Advisory Council in September, and in October orders were issued to the North Western and Oudh and Rohilkhand Railways to take preliminary steps for the formation of Committees and to the Eastern Bengal Railway for the necessary alterations in the constitution of their existing Committee. Company

worked railways were, at the same time, requested to take similar action. The Oudh and Rohilkhand Railway Committee met for the first time in February and on several other railways the formation of Committees was completed although no meetings actually took place before the 31st March.

Compensation for loss and damage to goods in transit.—The rise in the amount of these payments has been the subject of most serious consideration by the Railway Board and receive the special attention of the Incheapo Committee. Not only do the claims paid in full represent a very large item of working expenses, but the claims not presented or which are repudiated must involve considerable loss to the trading community. During 1922-23, a considerable advance was made both in the methods of preventing thefts and in the more expeditious settlement of claims. Noteworthy among the former are the introduction of rivetting or other forms of securing wagon doors and schemes for the reorganisation of watch and ward.

Revision of forms of Risk Notes.—Closely related to the subject of the prevention of thefts of railway consignments is the extent of liability imposed on railway administrations in respect to goods in transit. This liability is governed by Chapter VII of the Indian Railways Act IX of 1890 which, *inter alia*, provides for

agreements limiting the responsibility of the administration. In practice such agreements, commonly referred to as risk notes, are executed in consideration of the acceptance by the railways of a rate of freight materially lower than the standard of railway risk rate and in certain other special cases. The degree of immunity afforded to the railways by the existing forms of risk notes is considerable and has been frequently quoted as encouraging carelessness and dishonesty among the railway staff. The commercial community have constantly pressed for a material revision of these forms. The matter was the subject of a debate in the Legislative Assembly in March 1922 and a resolution was adopted as a result of which a Committee was appointed to consider this revision. The recommendations of this Committee, received in September 1922, involved considerable changes in the form of risk notes aiming chiefly at imposing on the railways the onus of proof in cases where losses appeared to be *prima facie* due to

misconduct of railway staff. After obtaining the views of Local Governments, Railway Administrations and Chambers of Commerce on these recommendations, the revised forms were referred to the legal advisers of Government and were at the close of the year under review, still under consideration by them.

Conditions of 3rd Class Travel.—The desirability of improving the conditions of travel of third class passengers has been constantly referred to in the press and in the Legislature, and in September 1922, the Legislative Assembly adopted a resolution on the subject. Definite schemes of improvements directed towards the removal of these grievances have been adopted by all railways, but these have, in common with all other railway activities, come under review as the result of the Retrenchment Committee's report. It is anticipated that the discussions by Local Advisory Committees will be of special utility in this matter.

THE CHIEF RAILWAYS IN INDIA.

The Assam-Bengal Railway; which is constructed on the metre gauge, starts from Chittagong and runs through Surma Valley across the North Cachar Hills into Assam. It is worked under a limited guarantee by a company.

Mileage open	1,029.90.
Capital outlay	Rs. 18,21,82,000.
Net earnings	Rs. 1,62,06,000.
Earnings per cent.	0.90.

Bengal and North-Western.

The Bengal and North-Western Railway was constructed on the metre gauge system by a company without any Government assistance other than free land and was opened to traffic in 1885. The system was begun in 1874 as the Tirhut State Railway. In 1890 this line was leased by Government to the Bengal and North-Western Railway. Since then extensive additions have been made in both sections. It is connected with the Rajputana metre gauge system at Cawnpore and with the Eastern Bengal State Railway at Khatihar and the Oudh and Rohilkhand Railway at Benares.

Mileage open	2,061.98.
Capital outlay	Rs. 18,21,82,000.
Net earnings	Rs. 1,62,06,000.
Earnings per cent.	8.90.

Bengal-Nagpur.

The Bengal-Nagpur Railway was commenced as a metre gauge from Nagpur to Chhatishgarh in the Central Provinces in 1887. A company was formed under a guarantee which took over the line, converted it to the broad gauge and extended it to Howrah, Cuttack and Katni. In 1901 a part of the East Coast State Railway from Cuttack to Vizagapatam was transferred to it and in the same year sanction was given for an extension to the coal fields and for a connection with the Branch or the East Indian Railway at Hariharpur.

Mileage open	2,829.71
Capital outlay	Rs. 52,78,86,000.
Net earnings	Rs. 1,93,55,000
Earnings per cent.	3.57.

Bombay Baroda.

The Bombay, Baroda and Central India Railway is one of the original guaranteed railways. It was commenced from Surat via Baroda to Ahmedabad, but was subsequently

extended to Bombay. The original contract was terminable in 1880, but the period was extended to 1905; and then renewed under revised conditions. In 1885 the Rajputana Malwa metre gauge system of State railways was leased to the Company and has since been incorporated in it. On the opening of the Nagda-Muttra, giving broad gauge connection through Eastern Rajputana with Delhi the working was entrusted to this Company. On the acquisition of the Company in April 1907 the purchase price was fixed at £11,685,581.

Mileage open	1,299.18.
Capital outlay	Rs. 35,63,55,000.
Net earnings	Rs. 1,37,58,000.
Earnings per cent.	3.86.

Burma Railways.

The Burma Railway is an isolated line, and although various routes have been surveyed there is little prospect of its being connected with the Railway system of India in the near future. In reply to a question in the Imperial Legislative Council in 1919, Sir Arthur Anderson said :—" During 1914-15 extensive survey operations were carried out to ascertain the best alignment for a railway connection along the coast route between Chitagon and certain stations on the Burma Railways south of Mandalay. A rival route via the Hukong Valley between the northern section of the Assam Bengal Railway and the section of the Burma Railways north of Mandalay was to have been surveyed during the following year but was postponed because of the war. It is now proposed to commence this survey during the coming cold weather, and on its completion, Government will have sufficient information to enable them to decide which route shall be adopted. Thus no arrangements for the construction of a line have yet been made nor has any concession been granted, but it is probable that the line selected will be built at the cost of Government and worked by one or other of the main lines which it will connect." It was commenced as a State Railway and transferred in 1896 to a Company under a guarantee.

Mileage open	1,622.63.
Capital outlay	Rs. 22,64,67,000.
Net earnings	Rs. 1,06,83,000.
Earnings per cent.	4.72.

Eastern Bengal.

The Eastern Bengal State Railway was promoted under the original form of guarantee and was constructed on the broad gauge. The first portion of the line running to Calcutta over the Ganges was opened in 1862. In 1874 sanction was granted for the construction on the metre gauge of the Northern Bengal State Railway, which ran from the north bank of the Ganges to the foot of the Himalayas on the way to Darjeeling. These two portions of the line were amalgamated in 1884 into one State Railway.

Mileage open	1,118 75.
Capital outlay	Rs. 13,85,69,000.
Net earnings	Rs. 30,33,000.
Earnings per cent.	2.19.

The East Indian.

The East Indian Railway is one of the three railways sanctioned for construction as experimental lines under the old form of guarantee. The first section from Howrah to Pandua was opened in 1854 and at the time of the Mutiny ran as far as Raniganj. It gives the only direct access to the port of Calcutta from Northern India and is consequently fed by all the large railway systems connected with it. In 1880 the Government purchased the line, paying the shareholders by annuities; but leased it again to the company to work under a contract which is terminable in 1919.

Mileage open	2,773.34.
Capital outlay	Rs. 92,86,90,000.
Net earnings	Rs. 5,12,34,000.
Earnings per cent.	5.52.

Great Indian Peninsula.

The Great Indian Peninsula Railway is the earliest line undertaken in India. It was promoted by a Company under a guarantee of 5 per cent. and the first section from Bombay to Thana was open for traffic in 1853. Sanction was given for the extension of this line via Poona to Raichur, where it connects with the Madras Railway, and to Jubbulpore where it meets the East Indian Railway. The feature of the line is the passage of the Western Ghats, these sections being 15½ miles on the Bhore Ghat and 9½ miles on the Thul Ghat which rise 1,131 and 972 feet. In 1900, the contract with the Government terminated and under an arrangement with the Indian Midland Railway that line was amalgamated and leased to a Company to work.

Mileage open	3,335.38.
Capital outlay	Rs. 95,08,53,000.
Net earnings	Rs. 1,24,80,000.
Earnings per cent.	1.31.

Madras Railway.

The Madras Railway was the third of the original railways constructed as experimental lines under the old form of guarantee. It was projected to run in a north-westerly direction in connection with the Great Indian Peninsula Railway and in a south-westerly direction to Calcutt. On the expiry of the contract in 1907 the line was amalgamated with the Southern Mahratta Railway Company, a system on the metre gauge built to meet the famine conditions in the Southern Mahratta Country and released to a large Company called the

Madras and Southern Mahratta Railway Company. The mileage is 3,169.01.

Mileage open	1,071.94.
Capital outlay	Rs. 24,69,24,000.
Net earnings	Rs. 1,17,38,000.
Earnings per cent.	4.75.

The North-Western.

The North-Western State Railway began its existence at the Sind-Punjab-Delhi Railway, which was promoted by a Company under the original form of guarantee and extended to Delhi, Multan and Lahore and from Karachi to Kotri. The interval between Kotri and Multan was unbridged and the railway traffic was exchanged by a ferry service. In 1871-72 sanction was given for the connection of this by the Indus Valley State Railways and at the same time the Punjab Northern State Railway from Lahore towards Peshawar was begun. In 1886 the Sind-Punjab-Delhi Railway was acquired by the State and amalgamated with these two railways under the name of the North-Western State Railway. It is the longest railway in India under one administration.

Mileage open	5,382.58.
Capital outlay	Rs. 1,15,11,58,000.
Net earnings	Rs. 1,11,49,000.
Earnings per cent.	0.97.

Oudh and Rohilkhand.

Oudh and Rohilkhand Railway was another of the lines constructed under the original form of guarantee. It began from the north bank of the Ganges running through Rohilkhand as far as Saharanpur where it joins the North-Western State Railway. It was not until 1887 that the bridge over the Ganges was completed and connected with the East Indian Railway. To effect a connection between the metre gauge systems to the North and those to the South of the Ganges, a third rail was laid between Bhuriwal and Cawnpore. The Company's contract expired in 1889 when the Railway was purchased by the State and has since been worked as a State Railway.

Mileage open	1,625.43.
Capital outlay	Rs. 24,84,09,000.
Net earnings	Rs. 91,48,000.
Earnings per cent.	3.69.

The South Indian.

The South Indian Railway was one of the original guaranteed railways. It was begun by the Great Southern India Railway Company as a broad gauge line; but was converted after the seventies to the metre gauge. This line has been extended and now serves the whole of the Southern India; south of the south-west line of the Madras Railway. Between Tuticorin and Ceylon a ferry service was formerly maintained, but a new and more direct route to Ceylon via Rameshwaram was opened at the beginning of 1914. As the original contract ended in 1907, a new contract was entered upon with the Company on the 1st of January 1908.

Mileage open	449.80.
Capital outlay	Rs. 7,91,48,000.
Net earnings	Rs. 19,98,000.
Earnings per cent.	2.52.

The Native States.

The principal Native State Railways are the Nizam's, constructed by a company under a guarantee from the Hyderabad State; the

Kathliwar system of railways; constructed by subscriptions, among the several Chiefs in Kathliwar; the Jodhpur-Bikaner Railway, constructed by the Jodhpur and Bikaner Chiefs;

the system of railways in the Punjab, constructed by the Patiala, Jind, Maler Kotla, and Kashmir Chiefs; and the railways in Mysore, constructed by the Mysore State.

INDIA AND CEYLON.

The possibility of connecting India and Ceylon by a railway across the bank of sand extending the whole way from Rameswaram to Mannar has been reported on from time to time, since 1895 various schemes having been suggested.

The South Indian Railway having been extended to Dhanushkodi, the southernmost point of Rameswaram Island, and the Ceylon Government Railway to Talaimannar, on Mannar Island, two points distant from each other about 21 miles across a narrow and shallow strait, the project has again been investigated with the idea of connecting these two terminal stations by a railway constructed on a solid embankment raised on the sand bank known as "Adam's Bridge", to supersede the ferry steamer service which has been established between these two points.

In 1913, a detailed survey was made by the South Indian Railway Company, and a project has now been prepared. This project contemplates the construction of a causeway from Dhanushkodi Point on the Indian side to Talaimannar Point on the Ceylon side, a length of 20.05 miles of which 7.10 will be upon the dry land of the various lands, and 12.86 will be in water. The sections on dry land will consist of low banks of sand pitched with coral and present no difficulty. The section through the sea will be carried on a causeway which it is proposed to construct in the following way. A double row of reinforced concrete piles, pitched at 10 feet centres and having their inner faces 14 feet apart, will first be driven into the sand. These piles will then be braced together longitudinally with light concrete arches and chains and transversely with concrete ties, struts and chains. Behind the piles slabs of reinforced concrete will be slipped into position, the bottom slabs being sunk well into the sand of the sea bottom. Lastly, the space enclosed by the slabs will be filled in with sand.

The top of the concrete work will be carried to six feet above high water level, and the rails will be laid at that level. The sinking of the piles and slabs will be done by means of water jets. This causeway, it is expected, will cause the suspended sand brought up by the currents, to settle on either side bringing about rapid accretion and eventually making one big island of Rameswaram Island and Mannar Island.

If this method of construction is adopted, it is estimated that the total cost of the causeway and works at the two terminal points, viz.:—Dhanushkodi and Talaimannar will be approximately 111 lakhs.

Indo-Burma Connection.

The raids of the Emden in the Bay of Bengal in 1914, and the temporary interruption of communications between India and Burma, stimulated the demand for a direct railway connection between India and Burma. Government accepted the position and appointed Mr. Richards, M. Inst. C.E., to be the engineer-in-charge of the surveys to determine the best

route for a railway from India to Burma. The coast route appears to be the favoured one. This would start from Chittagong, which is the terminus and head-quarters of the Assam-Bengal Railway and a seaport for the produce of Assam. The route runs southwards through the Chittagong district, a land of fertile rice fields intersected by big rivers and tidal creeks and it crosses the Indo-Burma frontier, 94 miles from the town of Chittagong. For about 160 miles further it chiefly runs through the fertile rice lands of Arrakan and crosses all the big tidal rivers of the Akyab delta. These include the Kalidan river which drains 4,700 miles of country and even at a distance of about 30 miles from its mouth is more than half a mile wide. About 260 miles from Chittagong the railway would run into the region of mangrove swamps which fringe the seacoast north and south of the harbour of Kaukkphu stretching out into the mangrove swamps like ribs from the backbone. Innumerable spurs of the Arrakan Yoma have to be crossed. Yoma is a mountain ridge which extends from Cape Negrais northwards until it loses itself in a mass of tangled hills east of Akyab and Chittagong. At its southern end the height of the ridge is insignificant but it has peaks as high as 4,000 feet before it reaches the altitude of Sandway and further north it rises much higher. It is a formidable obstacle to railway communication between India and Burma. This route is estimated to cost about £7,000,000 and would have to be supplemented by branch lines to Akyab where there is at present a considerable rice traffic and the cost of this would have to be added to the £7,000,000 already referred to.

The other routes examined have been the Iukong Valley route and the Manipur route which were surveyed by the late Mr. R. A. Way many years ago. The Manipur route is estimated to cost about £5,000,000 as it has to cross three main ranges of hills with summit levels of 2,650, 3,000 and 8,900 feet long. Altogether there would be about four miles of tunnelling through the three main ridges and through other hills and more than 100 miles of expensive undulating railway with grades as steep as 1 in 50 and 11,000 feet of aggregate rise and fall. The Iukong valley route seems to be the cheapest one as it is estimated to cost £3,500,000. This line is only about 284 miles long and it presents fewer engineering difficulties than either the Coast or the Manipur route. One hundred and fifty miles of this route lie in open country capable of cultivation though at present it is only very thinly populated. Only one range of hills has to be crossed and this can be negotiated with a summit tunnel of 5,000 feet long at a height of 2,500 feet. There are less than fifty miles of very heavy work and only about 4,500 ft. aggregate of rise and fall.

It is understood that the construction of this line will constitute one of the first changes on the Railway Budget when normal conditions are restored.

Main results of working of all Indian Railways treated as one system.

The Textile Industry.

793

India has been the home of the cotton trade from the earliest times. Its cotton, known as white wool, was well known to the ancients and its cloth was familiar to the West in the days of the overland route. The name Calico comes from the fine woven goods of Calicut, and the products of the Dacca handlooms are still remarkable as the finest muslins human skill can produce.

Indian Cotton.

The exports of Indian cotton began to assume importance with the opening of the sea route. They received an immense stimulus during the American Civil War, when the close blockade of the Confederate ports produced a cotton famine in Lancashire, and threw the English spinners back on India for their supply of raw material. When the war broke out the shipments of Indian cotton were 528,000 bales, but during the last year of the war they averaged 978,000 bales. Most of this cotton was sold at an enormously inflated price, and induced a flow of wealth into Bombay, the great centre of the trade, for which there was no outlet. The consequence was an unprece-

dent outburst of speculation known as the "Share Mania," and when the surrender of Lee re-opened the Southern Ports widespread ruin followed. It is estimated that the surplus wealth brought into the country by the American Civil War aggregated £92 millions. Since then the cultivation of Indian cotton, although interrupted by famine, has steadily increased. For the last season for which returns are available 1922-23 the total area in all the territories reported on was computed at 21,154,000 acres which is 2,703,000 acres or 15 per cent. above the revised figures of last year. The total estimated outturn was 5,196,000 bales of 400 lbs. which is 16 per cent. larger than the revised estimates of last year. To this figure may be added some 3,000 bales estimated as the production in Indian States in Bihar and Orissa which make no return.

Bombay, the Central Provinces and Hyderabad are the chief producing centres. The following table gives the rough distribution of the outturn. The figures are the estimated figures for the past season, and are not exact, but they indicate the distribution of the crop:—

Provinces and States.	1922-23. (Provisional estimates.)	
	Area. (1,000 acres.)	Yield. (1,000 bales.)
Bombay (a)	5,023	1,132
Central Provinces and Berar	4,703	1,200
Madras (a)	2,400	443
Punjab (a)	1,417	409
United Provinces (a)	659	178
Burma	272	45
Sind (a)	259	103
Bihar and Orissa (b)	80	15
Bengal (a)	72	17
North-West Frontier Province	15	3
Ajmer-Merwara	36	15
Assam	40	13
Delhi	2	1
Hyderabad	3,813	1,116
Central India	800	216
Baroda	585	116
Gwalior	523	74
Rajputana	302	76
Mysore	83	21
Total	21,154	5,196

The distribution of the export trade is indicated in the appended table.

Exports of Cotton.—A portion of the Indian crops of the season 1921-22 and a portion of the crop of the season 1922-23 came into the statistical consideration in the exports during the year 1922-23. The exports amounted to 12 million cwt. valued at Rs. 71 crores, against 10½ million cwt. valued at Rs. 54 crores in 1921-22. This represents 4½ per cent. of the total value of raw materials exported from India and 24 per cent. of the total exports. The exports showed an increase of 12 per cent. in quantity and 32 per cent. in value. The average declared value per cwt. rose from Rs. 50½ to 16 or by 59 per cent. whereas the total increase was Rs. 17 crores. The principal purchasers of Indian cotton are Japan and China which together took 63 per cent. of the total export during 1921-23. Besides these, Germany, Belgium, the United Kingdom, Italy, and France who are large consumers of Indian raw cotton, had 8, 7, 6, 7, and 4 per cent. respectively.

(a) Includes Indian States.

(b) Excluding Indian States for which the yield is roughly estimated at 3,000 bales.

† Bales of 400 lbs. each.

Bombay is the great centre of the cotton trade. The principal varieties are Dhollerias, Broach, Oomras (from the Berars), Dharwar and Coomptas. Broach is the best cotton grown in Western India. Hinganghat cotton, from the Central Provinces, has a good reputation. Bengals is the name given to the cotton of the Gangetic valley, and generally to the cottons of Northern India. The Madras cottons are known as Westerns, Coconadas, Coimbatores and Tinnevellys. The best of these is Tinnevelly. Cambodia cotton has been grown with success in Southern India, but it shows a tendency to revert. The high prices of cotton realised of recent years have given a great impetus to cultivation. Government have also been active in improving the class of cotton produced, by seed selection, hybridization and the importation of exotic cottons. Although these measures have met with a considerable measure of success, they have not proceeded far enough to leaven the

whole outturn, which still consists for the most part of a short-staple early maturing variety; suitable to soils where the rainy season is brief.

Reference has been made to the popularity of the Indian handloom cloths in the earliest days of which we have record. This trade grew so large that it excited alarm in England, and it was killed by a series of enactments, commencing in 1701, prohibiting the use or sale of Indian calicoes in England. The invention of the spinning Jenny and the power loom and their development in England converted India from an exporting into an importing country, and made her dependent on the United Kingdom for the bulk of her piece-goods. The first attempt to establish a cotton mill in India was in 1838, but the foundations of the industry were really laid by the opening of the first mill in Bombay in 1856. Thereafter, with occasional set backs from famine, plague and other causes, its progress was rapid.

The following statement shows the quantity (in pounds) of yarn of all counts spun in all India for the twelve months, April to March, in each of the past three years:—

	1920-21.	1921-22.	1922-23.
BRITISH INDIA.			
Bombay	469,944,060	492,634,404	497,351,824

Indian States of Indore, Mysore, Baroda, Nandgaon, Bhavnagar, Hyderabad, Wadhwan, Gwallor (Ujjain) and Pondicherry (a)	38,347,156	40,452,279	43,037,420
GRAND TOTAL ..	660,002,597	693,462,999	705,873,443

(a) Including the production of one mill only.

The spinning of yarn is in a large degree centred in Bombay, the mills of that province producing nearly 75 per cent. of the quantity produced in British India. The United Provinces of Agra and Oudh and Madras

produced about 6 per cent. and 8 per cent. respectively, while Bengal and the Central Provinces produced 4·4 and 5 per cent. Elsewhere the production is as yet very limited.

BOMBAY SPINNERS.

Here is a detailed statement of the quantity (in pounds) and the counts, or numbers, of yarn spun in Bombay Island :—

					1920-21.	1921-22.	1922-23.

TOTAL ..					660,002,597	693,462,999	705,873,443

In the early days of the textile industry the energies of the millowners were largely concentrated on the production of yarn, both for the China market, and for the handlooms of India. The increasing competition of Japan in the China market, the growth of an indigenous industry in China and the uncertainties introduced by the fluctuations in the China exchanges consequent on variations in the price of silver compelled the millowners to cultivate the Home market. The general tendency of recent years has been to spin

higher counts of yarn, importing American cotton for this purpose to supplement the Indian supply; to erect more looms, and to produce more dyed and bleached goods. This practice has reached a higher development in Bombay than in other parts of India, and the Bombay Presidency produces nearly 78.8 per cent. of the cloth woven in India. The United Provinces produces 3.2 per cent.; the Central Provinces 4 per cent. and Madras 4 per cent. Grey and Bleached goods represent nearly 74 per cent. of the whole production.

ANALYSIS OF WOVEN GOODS.

The following brief extract is taken from the statement of the quantity (in pounds and their equivalent in yards) and description of woven goods produced in all India, including Native States:—

—	1920-21.	1921-22.	1922-23.
Grey and Bleached piece-goods—			
Pounds	263,564,482	300,030,343	300,342,165
Yards	1,129,882,568	1,284,751,703	1,271,723,244
Coloured piece-goods—			
Pounds	98,587,636	98,432,061	98,634,842
Yards	450,967,178	446,821,593	453,494,469
Grey and coloured goods other than piece-goods—			
Pounds	3,484,852	3,052,986	3,422,967
Dozens	707,449	629,375	1,212,640
Hosiery—			
Pounds	410,784	363,099	438,932

The Jute Industry.

Considering its present dimensions, the jute industry of Bengal is of very recent origin. The first jute mill in Bengal was started at Rishra in 1855, and the first power-loom was introduced in 1859. The original outturn was 8 tons per day. In 1909 it had grown to 2,500 tons per day, it is now 4,000 tons per day, and it shows every indication of growing and expanding year by year. Another interesting thing about the jute industry of Bengal is that, although it is practically a monopoly of Scotsmen from Dundee, the industry itself owes its inception to an Englishman. The founder of the industry was George Acland, an Englishman, who began life as a midshipman in the navy, and was for some years in the East India Marine Service. He quitted this service while still a young man, and engaged in commercial pursuits in Ceylon, where he was successful. Later on he turned his attention to Bengal, and arriving in Calcutta about 1853 he got into touch with the management of the paper works, then at Serampore, where experiments were being tried with country grasses and fibre plants to improve the quality or cheapen the manufacture of paper. This seems to have suggested to Acland the manufacture of rhea, and in 1854 he proceeded to England, with a view to obtaining machinery and capital in order to manufacture goods from that material. During this trip he visited Dundee, and while there Mr. John Kerr, of Douglas Foundry, suggested to him the importing of machinery into Bengal "where the jute comes from and spin it there." This suggestion bore fruit, for shortly afterwards Acland placed orders with Kerr for a few systems of preparing and spinning machinery, and returned to India the same year accompanied by his two sons and a few Dundee mechanics who were to assist him in erecting and operating the first jute mill in Bengal. This, as has been stated, was at Rishra, the site of the present Wellington mills, near Serampore, and here, in 1855, the first machine spun jute yarns were made. As not infrequently happens the pioneer got very little out of his venture. After several ups and downs the Acland interest in the Rishra mill ceased in 1867, and the company which Acland had formed in 1854 was wound up in 1868.

Power-loom.—The pioneer's example was followed by Mr. George Henderson of that silk and firm, and in 1859 the Borneo Jute Co. was launched under his auspices. To this company is due the credit of introducing the power-loom for jute cloth. Unhindered by the financial difficulties which had burdened the Aclands, the Borneo Jute Co. made rapid progress, doubling their works in 1864, and clearing their capital twice over. In 1872 the mills were turned into a limited liability company, the present "Barnagore Jute Manufacturing Co., Ltd." Four other mills followed in succession—Gouripore, Serajgunge, and India Jute Mills.

"From 1866 to 1873," writes Mr. David Wallace in "The Romance of Jute," "the mills excepting the Rishra mill simply

coined money and brought the total of their looms up to 1,250." To illustrate the prosperity of the industry at this period we may take the dividends paid by the Barnagore Company. On the working of their first half year, a 15 per cent. interim dividend was declared, which seemed to justify the enormous capital at which the company was taken over from the Borneo Company, and shares touched 68 per cent. premium. The dividend for the first year, ending August 1873, was 25 per cent., for 1874, 20 per cent., and for 1875 10 per cent. Then came a change. The investing public had forgotten the effect of the Port Canning bubble, and the condition of the jute industry in 1872-73 seeming to offer a better return than coal or tea, both of which had just enjoyed a boom, it was only necessary to issue a prospectus of a jute mill to have all the shares snapped up in the course of an afternoon.

In 1872-73 three new companies were floated locally—the Fort Gloster, Budge Budge and Sibpore, and two Home companies, the Champdany and Samnuggur, all of which commenced operations in 1874. In 1874-5 eight other mills were launched—the Howrah, Oriental (now Union), Asiatic (now Soorah), Clive, Bengal Pressing and Manufacturing Co. (now the Bellaghatta-Barnagore branch mill), Rustonjee (now the Central), Ganges (registered in England), and Hastings, owned by Messrs. Birkmyre Bros., of Greenock fame—in all thirteen new companies, coming on all of a heap and swelling the total looms from 1,250 up to 3,500. This was too much of a strain for the new industry, and for the next ten years all the mills had a severe struggle. The older ones all survived the ordeal, but four of the new concerns—the Oriental, the Asiatic, the Bengal Pressing and Manufacturing Co. and the Rustonjee—became moribund, to appear again later on under new names and management. Fort Gloster also suffered badly.

Between 1875 and 1882 only one new mill was put up. This was Kamarhatty, promoted by Messrs. Jardine, Skinner & Co., which came into being in 1877, as the result of Dr. Barry's visit to Calcutta in 1876, when he transferred the agency of the Gouripore Co. from Messrs. Jardine, Skinner & Co. to his own firm. This mill, together with additions made by some of the other mills, brought the total looms up to 5,150 in 1882. By the end of 1885 the total was further augmented by the Hooghly, Titaghur, Victoria and Kankarnah mills, bringing the number of looms at work up to 6,700. From this period on to 1894 no new mills came into existence except the Calcutta Twist Mill, with 2,480 spindles, since merged into the Wellington branch of the Champdany Co. Between 1896 and 1900 the following new mills were started:—the Gordon Twist Mill with 1,800 spindles (now acquired by Anglo-India), Khardah, Gondolpara (French owned), Alliance, Arathoon, Anglo-India, Standard, National, Delta (which absorbed the Serajgunge), and the Kinnison. A full of four years witnessed large extensions to the existing mills, after which came the following series of new

mills, besides further heavy extensions—Dalhousie, Alexandra, Naihati, Lawrence, Reliance, Belvedere, Auckland, Kelvin and Northbrook.

Progress of the Industry.

THE record of the jute industry may well be said to be one of uninterrupted progress. The following statement shews **quinquennial aver-**

ages from the earliest year for which complete information is available with actuals for 1917-18, 1918-19, 1919-20, 1920-21 and 1921-22, and the figures in brackets represent the variations for each period, taking the average of the quinquennium from 1879-80 to 1883-84 as 100 :—

		Number of mills at work.	Authorised Capital (in lakhs of Rs.)	Number (in thousands) of		
				Persons employed.	Looms.	Spindles.
Average—						
1879-80 to 1883-84	..	21 (100)	270.7 (100)	38.8 (100)	5.5 (100)	88 (100)
1884-85 to 1888-89	..	24 (114)	341.6 (126)	52.7 (136)	7 (127)	138.4 (157)
1889-90 to 1893-94	..	26 (124)	402.6 (149)	64.3 (166)	8.3 (151)	172.6 (196)
1894-95 to 1898-99	..	31 (148)	522.1 (193)	86.7 (223)	11.7 (213)	244.8 (278)
1899-1900 to 1903-04	..	36 (171)	680 (251)	114.2 (294)	16.2 (295)	334.6 (380)
1904-05 to 1908-09	..	46 (219)	960 (355)	165 (425)	24.8 (451)	510.5 (580)
1909-10 to 1913-14	..	60 (286)	1,209 (443)	208.4 (537)	33.5 (609)	691.8 (786)
1914-15 to 1918-19	..	73 (348)	1,403.6 (519)	259.3 (668)	39.7 (722)	821.2 (933)
1917-18	..	76 (362)	1,428.5 (528)	266. (686)	40.6 (738)	834 (948)
1918-19	..	76 (362)	1,477.2 (546)	275.5 (710)	40. (727)	839.9 (954)
1919-20	..	76 (362)	1,563.5 (579)	280.4 (723)	41.0 (745)	856.3 (973)
1920-21	..	77 (367)	1,923.5 (712)	288.4 (758)	41.6 (745)	869.9 (998)
1921-22	..	81 (386)	2,122.4 (784)	288.4 (743)	43.0 (782)	908.3 (1,032)

The production of the mills has increased to a still greater extent. The following figures show the exports of jute manufactures and the declared values for the same periods. The value of jute manufactures exported by sea in 1922-23 was over thirty-two times as great as the average value of the export in the period 1879-80 to 1883-84 :—

			Jute manufactures.		Value in lakhs of Rs.
			Gunny bags in millions of number.	Gunny cloths in millions of yards.	
1879-80 to 1883-84	54.9 (100)	4.4 (100)	124.9 (100)
1884-85 to 1888-89	77 (140)	15.4 (350)	162.9 (130)
1889-90 to 1893-94	111.5 (203)	41 (932)	280.3 (232)
1894-95 to 1898-99	171.2 (312)	182 (4,136)	518 (415)
1899-1900 to 1903-04	206.5 (376)	427.2 (9,709)	826.5 (662)
1904-05 to 1908-09	257.8 (469)	698 (15,864)	1,442.7 (1,154)
1909-10 to 1913-14	339.1 (618)	970 (2,045)	2,024.8 (1,621)
1914-15 to 1918-19	667.6 (1,216)	1,156 (26,273)	4,010.3 (3,218)
1919-20	342.7 (624)	1,275.1 (28,980)	5,001.5 (4,004)
1920-21	533.9 (987)	1,852.7 (33,800)	5,290.4 (4,273)
1921-22	386.7 (715)	1,120.5 (28,000)	2,999.5 (2,410)
1922-23	344.2 (637)	1,254.3 (31,350)	4,040.4 (3,265)

Until the outbreak of war the exports by sea of raw jute were marked by increases from year to year, although the increase was very much less than that in the case of manufactures. During the war years exports declined very considerably. The cessation of the war stimulated the export trade and in 1919-20, the exports showed an increase, as compared with the average of the war quinquennium (1914-15 to 1918-19). In the following two years, the exports recorded a decrease and in 1922-23 they again made a recovery and amounted to 578,000 tons.

Jute, raw, ton.	
Average 1879-80 to 1883-84..	375,000 (100)
" 1884-85 to 1888-89..	445,000 (119)
" 1889-90 to 1893-94..	500,000 (133)
" 1894-95 to 1898-99..	615,000 (164)
" 1899-1900 to 1903-04	635,000 (169)
" 1904-05 to 1908-09..	755,000 (201)
" 1909-10 to 1913-14..	765,000 (204)
" 1914-15 to 1918-19..	464,000 (124)
Year 1919-20	592,000 (158)
" 1920-21	472,000 (129)
" 1921-22	468,000 (125)
" 1922-23	578,000 (154)

The total quantity of jute manufactures exported by sea from Calcutta during the year 1922-23 was 663,000 tons as against 639,000 tons in the preceding year and 603,500 tons in the pre-war year 1913-14. The values of these exports amounted to Rs. 40·28 lakhs, or an increase of Rs. 10·33 lakhs over the preceding year and Rs. 12·68 lakhs over the pre-war year. The shipments of gunny bags were valued at Rs. 15·82 lakhs and of gunny cloth Rs. 24·24 lakhs as against Rs. 13·86 and Rs. 15·92 lakhs respectively in the preceding year and Rs. 12·48 and Rs. 15·58 lakhs in the pre-war year.

The price of raw jute reached a very high point in 1906-07, the rate being Rs. 65 per bale; in 1907-08 it dropped to Rs. 42 per bale, and

the fall was accentuated in 1908-09 and 1909-10, the price having declined to 36·4 and Rs. 31. In 1917-18 it dropped to Rs. 38-8-0 but rose again in 1919-20 up to Rs. 77-8-0. In 1920-21 it dropped to Rs. 65, but rose again to Rs. 66. It again declined to Rs. 66. In 1921-22 the price rose to Rs. 73 at the end of September, but fell back again to Rs. 50 at the end of November and recovered at Rs. 64 at the close of the year.

Price of jute, ordinary, per bale of 400 lbs.

Rs. a. p.	
1879-80 to 1883-84 ..	23 8 0 (100)

The 1923 crop.—The final figures of outturn for the three provinces work out as follows:—

PROVINCE.	BALES.	
	1922.*	1923.
Bengal (including Cooch Behar)	4,798,279	6,204,516
Bihar and Orissa (including Nepal)	421,021	468,781
Assam	266,700	322,500
Total ..	5,486,000	6,995,807

PROVINCE.	AREA IN ACRES.	
	1922.*	1923.
Bengal (including Cooch Behar)	1,550,000	2,014,615
Bihar and Orissa	160,000	183,770
Assam	89,900	114,300
Total ..	1,799,900	2,312,685

* Revised.

The Indian Jute Mills Association now one of the most important, if not the most important, of the bodies affiliated to the Bengal Chamber of Commerce, was started under the following circumstances:—In 1886 the existing mills, finding that, in spite of the constant opening up of new markets, working results were not favourable, came to an agreement, with the late S. E. J. Clarke, Secretary to the Chamber of Commerce, as trustee, to work short time. The only mills which stood out of this arrangement were the Hooghly and Serajgunge. The first agreement, for six months dating from 15th February 1886, was subsequently renewed at intervals without a break for five years up to February 15, 1891. The state of the market at the time of the renewals dictated the extent of the short time, which varied throughout the five years between 4 days a week, 9 days a fortnight and 5 days a week. Besides short time, 10 per cent. of the sacking looms were shut down for a short period in 1890. An important feature of this agreement was a mutual undertaking by the parties not to increase their spinning power during the currency of the agreement, only a few exceptions being made in the case of a few incomplete new mills.

The present officials of the Association are:—**Chairman.**—Mr. G. F. Rose, M.L.C.

Members of Committee.—Mr. C. G. Cooper, M.L.C., Mr. R. B. Laird, Mr. J. W. A. Simpson and Mr. D. J. Leckie.

Working days.—With the introduction of the electric light into the mills in 1896, the working day was increased to 15 hours, Saturdays included, which involved an additional amount of cleaning and repairing work on Sundays. In order to minimise this Sunday work and give them a free Sunday, an agitation was got up in 1897 by the Mill European assistants to have the engines stopped at 2 or 3 p.m. on Saturdays. The local Government took the matter up, but their action went no further than applying moral suasion, backed by a somewhat half-hearted threat. The Mill Association held meetings to consider the question and the members were practically agreed as to the utility of early closing on Saturdays, but, *more suo*, could not trust themselves to carry it out without legislation. Unfortunately the Government of India refused to sanction the passing of a Resolution by the provincial Government under the Factory Act and the matter was dropped. Only a year or two ago the Jute Mills Association in despair brought out an American business expert, Mr. J. H. Parks, to advise them on the possibility of forming a jute trust with a view to exercising some control over the production and price of jute. Mr. Parks came, and wrote a report which the Association promptly pig-on-holed because the slump was over and the demand was so prodigious that there was no need to worry about the price of jute.

An Association, styled the **Calcutta Jute Dealers Association**, has lately been formed in Calcutta to promote and to guard the common interests of its members as dealers in jute for local consumption. The members are balers and brokers of jute for sale to the jute mill in and around Calcutta. The present Committee:—Mr. Geo. Morgan, M.L.A., **Chairman**, Members:—Messrs. D. King, G. C. Moon,

J. Campbell Forrester, M.L.C., J. R. Miller and D. A. Wylie.

Effects of the War.—The official review of the Trade of India in 1916-17 says:—The value of the exports of raw jute increased in 1916-17 by nearly Rs. 65 lakhs to Rs. 1,829 lakhs. The quantity exported, however, was less than in the preceding year. The estimated yield of the crop was 12 per cent. above that of the previous year, viz., 1,490,000 tons or 8,340,000 bales. Owing to the lack of tonnage and other abnormal circumstances brought about by the war, the quantity exported was 10 per cent. below that of the previous year. Of the consumers the United Kingdom and Italy took less, while the United States, France (mainly *via* Dunkirk), Russia (*via* Vladivostok) and Brazil took greater quantities. There were, of course, no exports to enemy countries which took more than 27 per cent. in the five years ending 1913-14, the pre-war year. The increase in the value accompanied by a decrease in the volume of exports was due to the very high range of prices during the months of September, October, November and December. Towards the close of the year under review prices steadily declined, and have since gone still lower.

Jute Manufactures.—The value of the exports now approximates to Rs. 42 crores. In spite of the war with its attendant difficulties of freight and finance, the exports of gunny cloth showed an increase of Rs. 241 lakhs of which Rs. 163 lakhs were due to higher prices and Rs. 78 lakhs to an increase in the volume of exports. There were also an increase of Rs. 118 lakhs in the value of gunny bags exported. The number of bags shipped increased while the weight decreased, and bags for war purposes being lighter than the ordinary bags for transporting grain. Exports to Australia in 1916-17 were a record. The United Kingdom with Australia took more than half of the number of bags exported while the United States took more than half of the quantity of cloth exported.

There were 74 mills at work throughout the year with 41,292 looms and 863,339 spindles. The number of persons employed was 285,881. There were no difficulties as regards the supply of labour.

The number of gunny bags shipped from Calcutta during 1922-23 declined from 386 million bags to 342 million bags, but the value increased from Rs. 13,87 lakhs to Rs. 15,82 lakhs. Shipments of gunny cloth rose from 1,120 million yards to 1,251 million yards, valued at Rs. 15,92 lakhs and Rs. 24,24 lakhs, respectively.

Hemp and Jute Substitutes.

Experiments have been made during the last few years by the Agricultural Department of the Government of India with the **Deccan hemp** plant (*Hibiscus cannabinus*), which yields a fibre very similar to jute. As a result, a new variety of the plant, known as Type 3, has been obtained, which it is now proposed to introduce into several parts of India, and, as a beginning, the variety is to be grown on a number of estates in Bihar. A sample of the fibre prepared from this variety by the usual methods of retting was 10 ft. to 12 ft. long, of an exceptionally light colour, well cleaned, and of good strength

It was valued at £18 per ton with Bimilpatam jute at £12 10s., and Bengal first mark jute at £17 per ton. Decan hemp has been grown fairly extensively in Bombay, the Central Provinces, and Madras, where it is used for ropes and cordage and also for the manufacture of a coarse sackcloth. A valuable feature of the plant is its suitability for cultivation in such parts of India as are not suitable for jute.

Prior to the war, the United Kingdom's requirements of hemp were mainly supplied by the following countries in order of importance:—the Philippine Islands, New Zealand, India, Russia, Italy and Germany. The opinion appears to be held that the effect of the war will be to cause very considerable changes in the character of the fibre market. There will probably be labour difficulties, it is thought, in the prepa-

ration of the hemp crops of Russia and Hungary, and it is not unlikely that the world will look to countries such as India for the supply of fibres which may be used as substitutes for the European varieties of hemp. There can be no doubt that one of the early effects of the war was to firm up hemp prices. As far as Indian hemp is concerned, values were persistently depreciated during the first six months of 1914 owing to large stocks held; but the closure of the Ru-sian hemp market on the outbreak of war resulted in a marked improvement in values, and there was a keen demand and a considerable rise in price. Exports from Calcutta during 1922-23 made a great recovery from the previous year. The quantity advanced by 37 per cent. from 197,112 cwt. to 269,487 cwt., and the value from Rs. 6 93 lakhs to Rs. 36 68 lakhs.

THE WOOL INDUSTRY.

Wool exported from India consists not only of wool grown in India itself, but of imports from foreign sources, these latter coming into India both by land and by sea. Imports by sea come chiefly from Persia, but a certain quantity from Persia also comes by land, while the main imports are from Afghanistan, Central Asia, Tibet and Nepal. Quetta, Shikarpur, Amritsar and Multan are the main collecting centres for wool received by land from Afghanistan and Persia, whence it is almost invariably railed to Karachi for subsequent export overseas.

Imports and Exports.—A considerable amount of wool is imported annually from Tibet and, in normal years, from Afghanistan. In 1913-14 imports of wool manufactures from the British Empire were valued at Rs. 223 lakhs and from foreign countries at Rs. 142 lakhs. In 1919-20 these figures fell to Rs. 138 lakhs and Rs. 22 lakhs. But in 1920-21 imports of woollen manufactures rose to Rs. 553 lakhs.

The export trade in wool showed a marked increase in 1922-23, the shipments amounting to 53 million lbs. valued at Rs. 4.41 lakhs as compared with 32 million lbs. valued at Rs. 2.54 lakhs in the previous year.

Production in India.—The production of wool in India is estimated at 60 million lbs., the estimate being arrived at from the available figures of the number of sheep in the country and their estimated yield per fleece, the average quantity of wool yielded per sheep per annum being taken at only 2 lbs.

All Indian wools are classed in the grade of **carpet wools**, and it is correct to say of perhaps fully half the breeds of sheep found on the plains of India that they yield a kind of hair rather than of wool. They are reared chiefly on account of the mutton, and the fleece has been generally regarded as of subsidiary interest. In many respects, in actual fact, the Indian plains sheep approximate more nearly to the accepted type of the goat rather than of the sheep. Short remarks in his manual on Indian cattle and sheep, particularly with respect to the Madras type, that they "resemble a greyhound with tucked up belly, having some coarseness of form, the feet light, the limbs bony, sides flat and the tail short."

Mill manufacture.—The number of woollen mills at work in British India in 1902 was three, with an authorised capital of Rs. 38,50,000, and employing 23,800 spindles and

624 looms. The number of persons employed in the industry then was 2,559, and the quantity of woollen goods produced 2,118,000 lbs. At the end of 1917 the number of mills had risen to five, with an authorised capital of Rs. 2,56,50,000 employing 39,608 spindles and 1,155 looms. The weight of goods produced then was 9,744,264 lbs. and the number of persons employed 7,824. With regard to Indian States, there was one mill in Mysore in 1903 with a capital of Rs. 6,00,000, employing 1,430 spindles and 45 looms. The quantity of goods produced was 1,136,000 lbs. and the number of persons employed 297. In 1907 there was still only the one mill working in an Indian State—the authorised capital had been increased to Rs. 15,00,000, the quantity of goods produced to 1,721,087 lbs., and the number of persons employed to 563. Three of the mills manufacture all classes of woollen and worsted goods, the remainder manufacturing blankets only. The existence of these mills in India proved of great service to Government in the meeting of war requirements, and they were all employed to their fullest capacity in supplying army demands for greatcoat cloth, serges, puttees, flannels, blankets and hosiery. Their total capacity, however, was not sufficient to meet the full requirements of the army, and consequently their supplies had to be supplemented by large imports from home. The bulk of the wool used by the Indian mills is Indian wool, although it is supplemented to some extent by the importation of merinos and cross-breeds from Australia for the manufacture of the finer classes of goods. Their market for manufactured goods is almost entirely in India itself.

Blanket weaving and carpet manufacture are carried on in various parts of the country, notably in the Punjab and the United Provinces. Woollen pile carpets are made in many of the jails. Amritsar had a considerable trade at one time in weaving shawls from *pashm*, the fine under fleece of the Tibetan goat, but its place has been taken to some degree by the manufacture of shawls from imported worsted yarns, but more generally by the manufacture of carpets of a fine quality which find a ready sale in the world market. This work is done entirely on hand looms and the carpets fetch a high price.

Bibliography.—Notes on wool in India. By A. H. Silver and J. K. Mehta, (Govt. Press, Calcutta : 1919).

Silk.

In the early days of the East India Company the Indian Silk trade prospered greatly, and various sub-tropical races of the Silkworm were introduced. But the trade gradually declined for the following reasons:—

In the seventeenth and eighteenth centuries India's chief competitor in the silk trade was the Levant Company. Successful efforts, however, were made to acclimatise in Europe one or two races of a temperate worm, procured from China and Japan. When sericulture became part of the agriculture of France and Italy, a quality of silk was produced entirely different from that of India and Turkey, and its appearance created a new demand and organized new markets.

All subsequent experience seems to have established the belief that the plains of India, or at all events of Bengal, are never likely to produce silk that could compete with this new industry. On the lower hills of Northern India, on the other hand, a fair amount of success has been attained with this (to India) new worm, as, for example, in Dehra Dun and Kashmir. In Manipur, it would appear probable that *Bombyx mori*, possibly obtained from China, has been reared for centuries. The caprice of fashion has, from time to time, powerfully modified the Indian silk trade. The special properties of the *korah* silk were formerly much appreciated but the demand for them has now declined. This circumstance, together with defective systems of rearing and of hand-reeling and weaving, accounts largely for the present depression in the mulberry silk trade of India.

Mulberry-feeding worms.—Sir George Watt states that in no other country does the necessity exist so pressingly as in India to treat the subject of silk and the silk industries under two sections, viz., Bombycidae, the domesticated or mulberry-feeding silk worms; and Saturniidae, the wild or non-mulberry-feeding worms. In India the mulberry worm (*Bombyx Mori*) has been systematically reared for many centuries, there being six chief forms of it. In the temperate tracts of India various forms of *Morus alba*, (the mulberry of the European silk-producing countries), are grown specially as food for the silkworm. This is the case in many parts of the plains of Northern India, Baluchistan, Afghanistan, Kashmir, and along the Himalaya at altitudes up to 11,000 feet. The other species even more largely grown for the Indian silkworm is *M. Indica* of which there are many distinctive varieties or races. This is the most common mulberry of Bengal and Assam, as also of the Nilgiri hills.

India has three well-known purely indigenous silkworms; the *tasar*, the *muga* and the *eri*. The first is widely distributed on the lower hills, more especially these of the great central tableland, and feeds on several jungle trees. The second is confined to Assam and Eastern Bengal, and feeds on a laurel. The third exists in a state of semi-domestication, being reared on the castor-oil plant. From an art point of view the *muga* silk is the most interesting and attractive, and the cocoon can be reeled readily. The *eri* silk, on the other hand, is so extremely

difficult to reel that it is nearly always carded and spun—an art which was practised in the Khasi Hills of Assam long before it was thought of in Europe.

Experiments and results.—Numerous experiments have been made with a view to improving sericulture in India. French and other experts are agreed that one of the causes of the decline of the silk industry in India has been the prevalence of diseases and parasites among the worms, the most prevalent disease being pebrine. M. Lafont, who has conducted experiments in cross breeding, believes that improvement in the crops will be obtained as soon as the fight against pebrine and other diseases of the worms is taken up vigorously by the producers of seed and the rearers of worms, while improvement in the quality of the cocoons will be obtained by rearing various races, pure and cross bred.

In Kashmir and Mysore satisfactory results have been obtained. In the former State sericulture has been fostered on approved European principles with Italian reeling machinery, seed being imported annually on a large scale. In 1897 in Mysore Mr. Tata, after selecting a plantation and site for rearing houses, sent to Japan for a Superintendent and trained operatives. The Mysore authorities have made a grant of Rs. 9,000 a year to the Tata firm in return for instruction given to the people of Mysore in Japanese methods of growing the mulberry and rearing the insects. The products of the Mysore State are exported to foreign countries from Madras. The work of the Salvation Army is also noteworthy in various parts of India. They have furnished experts, encouraged the planting of mulberry trees, and subsidised several silk schools. The draft prospectus has been issued of a silk farm and institute to be started at Simla under the auspices of the Salvation Army. The Lieutenant-Governor of the Punjab has permitted the school to be called after his name, and the Punjab Government made a grant of Rs. 2,000 towards the expenses. Sir Dorabji Tata has also made a donation of Rs. 1,000. The Bengal Silk Committee under the guidance of some French experts have conducted cross-breeding experiments with a view to establish a multi-voltine hybrid of European quality. There is a Government sericultural farm at Berhampore, where, it is said, a pure white multi-voltine of silk worm is reared. The results of the Bengal Committee's labours may be summed up as follows: the only really effective method of dealing with the problem is to work up gradually to a point at which the whole of the seed cocoon necessary for the province will be supplied to rearers under Government supervision, and to establish gradually a sufficient number of large nurseries throughout the silk districts of the province.

In 1915 there was issued by the Agricultural Research Institute, Pusa, a *Bulletin* (No. 48 of 1915) entitled "First Report on the Experiments carried out at Pusa to improve the Mulberry Silk Industry." In a short Prefatory note Mr. Bainbrigge Fletcher (Imperial Entomo-

logist) explains that the object of the Bulletin is to place on record some of the more important experiments which were commenced at Pusa in the year 1910 and have since been carried on in the endeavour to fix a superior multivoltine race of the Mulberry Silkworm which would not degenerate and which would yield silk better both in quality and outturn than that supplied by the multivoltine races which are reared at present.

Central Nurseries.—The report of the Agricultural Department, Bengal, for the year ending June 30, 1913, gives an account of a scheme which has been devised with the object of reclaiming the silk industry. The aim of the scheme is gradually to establish throughout the silk districts a sufficient number of central nurseries with rearing houses and thus enable the whole of the seed cocoons required in the province to be supplied under Government supervision. It is believed that this is the only really effective method of dealing with the problem. A number of the existing smaller nurseries were closed during 1913 and others are being converted into enlarged and improved central nurseries with rearing houses complete. The ultimate success of the scheme depends largely on the willingness of the rearers to pay an adequate price for pure seed.

A pamphlet was published in 1915, by Mr. M. N. De, Sericultural Assistant at Pusa, which contains practical hints on improved methods which are recommended to be used for reeling mulberry silk in Bengal and other silk producing districts. It has been found that, by the provision of two small pulleys to the ordinary

Bengal type of reeling machine, superior thread can be obtained, the cost of the extra apparatus is merely nominal (five or six annas per machine) whilst the suitability of the machine for cottage workers is maintained. By attention to such simple points as the stifling and storage of cocoons and the temperature and quality of the water used in the reeling pans, great improvements can be effected in most silk centres in Bengal and other districts.

Exports of Silk.—As a result of the war the trade has showed in some degree signs of revival from its decadent condition, both as regards its volume and value. The value of exports during 1915-16 improved by Rs. 12 lakhs to Rs. 27½ lakhs, of which raw silk accounted for Rs. 24 lakhs. In 1916-17 the total exports rose to Rs. 54½ lakhs. In 1922-23 exports of raw silk amounted to Rs. 38 lakhs and of silk manufactures to approximately Rs. 2½ lakhs.

Imperial Silk Specialist.—At the end of 1915 it was decided that the first step to be taken to revive the silk industry should be the employment of a qualified expert who, after a careful study of the conditions not only in India but in other silk-producing countries, will formulate recommendations for the consideration of Government. With the approval of the Secretary of State, Mr. H. Maxwell-Lefroy, formerly Imperial Entomologist and now Professor at the Imperial College of Science and Technology, South Kensington, was appointed to the temporary post of Imperial Silk Specialist.

Indigo.

Indigo dyes are obtained from the *Indigofera*, a genus of Leguminosae which comprises some 300 species, distributed throughout the tropical and warm temperate regions of the globe, India having about 40. Western India may be described as the headquarters of the species, so far as India is concerned, 25 being peculiar to that Presidency. On the eastern side of India, in Bihar, Bengal, Assam and Burma, there is a marked decrease in the number of species but a visible increase in the prevalence of those that are met with.

There is evidence that when Europeans first began to export the dye from India, it was procured from the Western Presidency and shipped from Surat. It was carried by the Portuguese to Lisbon and sold by them to the dyers of Holland, and it was the desire to obtain a more ample supply of dye stuff that led to the formation of the Dutch East India Company and so to the overthrow of the Portuguese supremacy in the East. Opposition to indigo in 17th century Europe was keen owing to its interference with the wood industry, but it was competition to obtain indigo from other sources than India that led to the first decline of the Indian indigo industry.

In the middle of the eighteenth century, when the cultivation of indigo in the West Indies had been given up—partly on account of the high duties imposed upon it and partly because sugar and coffee were found to be more profitable—the industry was revived in India, and, as one of the many surprises of the industry, the province of Bengal was selected for this revival. It had no sooner been organised, however, than troubles next arose in Bengal itself through misunderstandings between the planters, their cultivators and the Government, which may be said to have culminated in Lord Macaulay's famous *Memorandum* of 1837. This led to another migration of the industry from Lower and Eastern Bengal to Tirhut and the United Provinces. Here the troubles of the industry did not end, for the researches of the chemical laboratories of Germany threatened the very existence of any natural vegetable dye. They first killed the madder dye of Europe, then the safflower, the lac and the *ai* dyes of India, and are now advancing rapidly with synthetic indigo, intent on the complete annihilation of the natural dye. Opinions differ on many aspects of the present vicissitude; meantime the exports from India have seriously declined, and salvation admittedly lies in the path of

cheaper production both in cultivation and manufacture. These issues are being vigorously faced and some progress has been accomplished, but the future of the industry can scarcely help being described as of great uncertainty. The issue is not the advantage of new regulations of land tenure, but one exclusively of natural *versus* synthetic indigo. (See Watt's "Commercial Products of India.") In this connection it may be noted that increases in the price of coal in England, due to labour difficulties, have greatly strengthened the position of natural indigo. In February 1915 a conference was held at Delhi when the possibility of assisting the **natural indigo industry** was considered from three points of view—agricultural, research and commercial. The agricultural or botanical side of the question is fully discussed by Mr. and Mrs. Howard Pusa in Bulletins Nos. 51 and 54 of the Agricultural Research Institute. Other aspects of the question were fully examined last year in the Agricultural Journal of India by Mr. W. A. Davis, Indigo Research Chemist to the Government of India. An **Indigo Cess**

Bill was passed in the Imperial Legislative Council in 1918. It provides for a cess on indigo exported from India for the scientific investigation of the methods of cultivation and manufacture of indigo, the proceeds of the cess being received and expended by Government.

Decline of the Industry.—Since synthetic indigo was put upon the market, in 1897, the natural indigo industry of India has declined very rapidly; apart from slight recoveries in 1906-07 and 1911-12, the decline continued without a break until the revival due to the impossibility of obtaining artificial dyes in sufficient quantities during the war.

The total area under indigo in 1922 is estimated at 296,800 acres, which is 7 per cent. below the finally revised area of last year. The total yield of dye is estimated at 54,600 cwt. (81,500 factory maunds *) as against 61,600 cwt. (92,000 factory maunds), the finally revised estimate of last year, or a decrease of 11 per cent. Details for the province are given below :—

Province.	Area (acres).		Yield (cwt.)	
	1922-23.	1921-22.	1922-23.	1921-22.
Madras	119,600	182,600	34,000	42,900
United Provinces	38,400	44,600	4,000	5,000
Bihar and Orissa	35,400	39,900	4,100	5,400
Punjab	55,000	33,000	10,400	6,300
Bengal	7,300	10,600	200	500
Bombay and Sind (including Indian States)	11,100	9,400	1,900	1,500
Total ..	296,800	320,100	54,600	61,600

Exports.—The exports by sea to foreign countries were in each of the last five years (in cwt.) as follows :—

From—	1918-19.	1919-20.	1920-21.	1921-22.	1922-23.
	cwt.	cwt.	cwt.	cwt.	cwt.
Calcutta	15,040	15,739	3,961	6,340	2,180
Madras ports	10,246	12,138	4,871	5,062	1,735
Bombay	4,281	4,179	1,301	837	555
Karachi	140	631	114	123	65
Total ..	32,707	32,387	10,250	12,362	4,535

One factory maund 75 lbs.

The Forests.

Even in the earliest days of the British occupation the destruction of the forests in many parts of India indicated the necessity for a strong forest policy, but whether or not our earlier administrators realized the importance of the forests to the physical and economic welfare of the country, the fact remains that little or nothing was done. The year 1855 marked the commencement of a new era in the history of forestry in India, for it was then that Lord Dalhousie laid down a definite and far-sighted forest policy. Further progress was delayed for a time by the Mutiny, but from 1860 onwards forest organization was rapidly extended to the other provinces. The earlier years of forest administration were beset with difficulties, which is not surprising considering that the Department was charged with the unpopular duty of protecting the heritage of Nature from the capacity of mankind, a duty which naturally roused the antagonism of the agricultural population of India. Exploration, demarcation and settlement, followed by efforts to introduce protection and some form of regular management, were the first duties of the Forest Department. Work on these lines, which is not yet completed in the more backward parts of the country, has been pursued steadily from the commencement, and in consequence large tracts of forest have been saved from ruin and are gradually being brought under efficient management. Whatever may have been the opinions held in some quarters half a century ago as to the need for a policy such as that expressed in Lord Dalhousie's memorable enunciation of 1855, there is no longer any doubt that results have amply justified the steps taken, and that in her forests India now possesses a property of constantly increasing value, the future importance of which it is hardly possible to over-estimate.

Types of Forest.—More than one-fifth of the total area of British India (including the Shan States) is under the control of the Forest Department. These areas are classified as reserved, protected or unclassified State forests. In the reserved forests rights of user in favour of individuals and the public are carefully recorded and limited at settlement while the boundaries are defined and demarcated; in the protected forests the record of rights is not so complete, the accrual of rights after settlement not being prohibited, and the boundaries are not always demarcated; while in the unclassified forests no systematic management is attempted, and as a rule the control amounts to nothing more than the collection of revenue until the areas are taken up for cultivation or are converted into reserved or protected forests. The total forest area of British India (including the Shan States) in 1920-21 was 250,473 square miles, or 23.1 of the total area. This was classed as follows: Reserved 103,491, Protected 7,516, Unclassed State 139,466.

Throughout this vast forest area, scattered over the length and breadth of India from the

Himalayan snows to Cape Comorin and from the arid juniper tracts of Baluchistan to the eastern limits of the Shan States, there is, as may be imagined, an infinite variety in the types of forest vegetation, depending on variations of climate and soil and on other local factors. Broadly speaking, the following main types of forest may be distinguished:—

(1) Arid-country forests, extending over Sind, a considerable portion of Rajputana, part of Baluchistan and the south of the Punjab, in dry tracts where the rainfall is less than 20 inches. The number of species is few, the most important tree being the babul or kikar (*Acacia arabica*), which however in the driest regions exists only by the aid of river inundations.

(2) Deciduous forests, in which most of the trees are leafless for a portion of the year. These forests, which extend over large areas in the sub-Himalayan tract, the Peninsula of India and Burma, are among the most important, comprising as they do the greater part of the teak and sal forests.

(3) Evergreen forests.—These occur in regions of very heavy rainfall, such as the west coast of the Peninsula, the eastern sub-Himalayan tract, and the moister parts of Burma and are characterized by the great variety and luxuriance of their vegetation.

(4) Hill forests.—In these the vegetation varies considerably according to elevation and rainfall. In the Eastern Himalaya, Assam and Burma, the hill forests are characterized by various oaks, magnolias and laurels, while in Assam and Burma the Khasia pine (*Pinus khasya*) grows gregariously at elevations of 3,000 to 7,000 feet. In the North-Western Himalaya the chief timber tree is the deodar (*Cedrus deodara*), which occurs most commonly at elevations of 6,000 to 8,000 feet, and in association with oaks or blue pine (*Pinus excelsa*), towards its upper limit the deodar merges into very large areas of spruce and silver fir, while below it are found extensive forests of the long-needled pine (*Pinus longifolia*) which is tapped for resin.

(5) Littoral forests.—These occur on the sea coast and along tidal creeks. The most characteristic trees belong to the mangrove family (*Rhizophoraceae*). Behind the mangrove belt is an important type of forest occasionally inundated by high tides, in which the most valuable species is the "sundri" (*Heritiera fomes*).

Forest Policy.—The general policy of the Government of India in relation to forests was definitely laid down in 1904 by the classification of the areas under the control of the Department into four broad classes, namely:—

(a) Forests the preservation of which is essential on climatic or physical grounds. These are usually situated in hilly country, where the retention of forest growth is of vital importance on account of its influence on the storage of

the rainfall and on the prevention of erosion and sudden floods.

(b) Forests which afford a supply of valuable timbers for commercial purposes, such, for example, as the teak forests of Burma, the sal forests of Northern, Central, and North-Eastern India, and the deodar and pine forests of the North-Western Himalaya.

(c) Minor forests, containing somewhat inferior kinds of timber, and managed for the production of wood, fodder, grazing and other produce for local consumption; these forests are of great importance in agricultural districts.

(d) Pasture lands.—These are not "forests" in the generally understood sense of the term, but grazing grounds managed by the Forest Department merely as a matter of convenience.

These four classes of forest are not always sharply divided from each other, and one and the same tract may to a certain extent be managed with more than one object.

Administration.—The forest business of the Government of India is carried out in the Department of Revenue and Agriculture. The Inspector-General of Forests is the head of the Forest Department and is the technical adviser to the Government of India in forest matters.

Territorial charges.—The various provinces are divided into one or more Forest Circles; each in charge of a Conservator of Forests; provinces containing three or more circles also have a Chief Conservator who is the head of the Department for his province. Circles are divided into a number of Forest Divisions, in charge of members of the Imperial or Provincial Forest Service; these Divisions in most cases correspond to civil districts. Each Division contains a number of Ranges in charge of junior members of the Provincial Service or of Forest Rangers or Deputy Rangers; heavy Divisions are also sometimes divided into Subdivisions. The Ranges are further subdivided into a number of beats or protective charges held by Forest Guards or in some cases by Foresters.

Non-territorial charges.—Apart from territorial charges there are various important posts of a non-territorial nature connected with Forest Research and Education, the preparation of Forest Working Plans, and other special duties. Among special posts may be mentioned that of Assistant Inspector-General of Forests, who in addition to Secretariat work, helps the Inspector-General of Forests in the scrutiny of working plans referred to in section 6.

The Forest Service.—The Forest Service comprises three branches:—

(1) The Imperial Service with a total personnel of 257 officers, consisting of the Inspector-General of Forests, Chief Conservators, Conservators, Deputy and Assistant Conservators. The Officers of this service are recruited in the United Kingdom, the present system of recruitment being by selection subject to the possession of an honours degree in some branch of Natural Science or an English, Welsh or Irish University, or of the B.Sc. degree in Pure Science of a Scottish University. Pro-

bationers are at present trained at a University possessing a forest school approved by the Secretary of State (Oxford, Cambridge and Edinburgh at present), this training being supplemented by a practical course, partly on the continent of Europe. A Forest Engineering branch has lately been added to the service.

(2) The Provincial Service with a total personnel of 280 officers, consisting of Extra Deputy and Extra Assistant Conservators, Officers for this service are recruited in India and trained at the Forest Research Institute, Dehra Dun, though a certain number of posts in this service are filled by the promotion of specially promising Rangers.

(3) The Subordinate Service, consisting of Forest Rangers (about 840), Deputy Rangers (about 900), Foresters (about 2,000) and Forest Guards (about 11,500). The Rangers are at present trained at three different centres—the Forest College at Dehra Dun (for provinces other than Burma, the Central Provinces and Madras), the Burma Forest School at Pyinmana (for Burma), and the Madras Forest College at Coimbatore (for Madras and the Central Provinces). These three institutions were established in 1878, 1898 and 1912 respectively. A scheme is now under consideration for the further decentralization of the training of Rangers, and it is probable that before long the number of training centres will be increased. The training of subordinates below the rank of Ranger is carried out in various local forest schools and training classes.

Research.—For the first fifty years of the existence of the Forest Department in India no attempt was made to organize the conduct of forest research, and thus to co-ordinate and elaborate the scientific knowledge so necessary for successful economic working. A commencement in organized forest research was at last made in 1906 by the establishment, at the instance of Sir Salthill Barclay-Wilmot, then Inspector-General of Forests, of a Forest Research Institute at Dehra Dun. From that time onwards research work has been prosecuted energetically in spite of deficient accommodation. The Forest Research Institute, which is under the administrative control of the Inspector-General of Forests, is in the charge of a President. There are five main branches of research, namely Sylviculture, Forest Botany, Forest Economic Products, Zoology and Chemistry, each branch being in charge of a research officer. In addition specialists are appointed temporarily when necessary and are attached to the Institute to carry out investigations in subjects of particular economic importance. Thus a cellulose expert has been employed for some time to investigate possible new sources of paper-making materials, of which the forest of India contain abundant supplies, while more recently a tanning expert has been engaged to study the question of tanning materials.

Forest Products.—Forest produce is divided into two main heads:—(1) Major produce, that is timber and firewood, and (2) Minor produce, comprising all other products such as bamboos, leaves, fruits, fibres, grass, gums, resins, barks, animal and mineral products, etc.,

The average annual volume of timber and fuel and the value of minor produce removed from State forests during the year 1921-22, is given in the following statement:—

Forest produce removed from State forests during the year 1921-22.

Agency of exploitation.	MAJOR PRODUCE (VOLUME).		MINOR PRODUCE (VALUE).			
	Timber.	Fuel.	Bamboos.	Grazing and fodder grass.	Other minor produce.	TOTAL.

Forest Industries.—The important role which the forests of a country play in its general commercial welfare and in providing employment for its population is not always fully recognized. Fifteen years ago it was estimated that in Germany work in the forests provided employment for 1,000,000 persons while 3,000,000 persons, earning £30,000,000 a year, were employed in working up the raw material yielded by the forests. If accurate estimates were available for India, they would no doubt show that apart from the jungle population which is directly dependent on the forests and the large numbers of wood-cutters, sawyers, carters, carriers, raftsmen and others working in and near them, employment on an excessive scale is provided to persons engaged in working up the raw products. Among these latter may be mentioned carpenters, wheelwrights, coopers, boat-builders, tanners, rope-makers, lac-manufacturers, basket-makers,

and many other classes of skilled labourers. The Indian census of 1911 gave 1,191,867 people and their dependents so employed in British India, and a further 394,097 in Native States; but these are probably below the actuals, as much forest labour is not whole-time labour, devoting seven or eight months in the year to forest work and the rest to agriculture. With the opening up of the forests, the extension of systematic working, the wider use of known products, and the possible discovery of new products, a steady and extensive development of industries dependent on the forests of India may be confidently anticipated in the future.

Financial Results.—The steady growth of forest revenue, expenditure and surplus during the past 50 years is shown in the following statement, which gives annual averages for quinquennial periods:—

Financial Results of Forest Administration in British India from 1864-65 to 1918-19 (in lakhs of rupees).

Quinquennial period.	Gross revenue (average per annum).	(Expenditure average per annum).	Surplus (average per annum).	Percentage of surplus to gross revenue.
	Lakhs.	Lakhs.	Lakhs.	Lakhs.
1864-65 to 1868-69	27·4	23·8	13·6	36·4
1869-70 to 1873-74	56·3	39·3	17·0	30·2
1874-75 to 1878-79	66·6	45·8	20·8	31·2
1879-80 to 1883-84	88·2	56·1	32·1	36·4
1884-85 to 1888-89	116·7	74·3	42·4	36·2
1889-90 to 1893-94	159·5	86·0	73·5	46·1
1894-95 to 1898-99	177·2	98·0	79·2	44·7
1899-1900 to 1903-04	196·6	112·7	83·9	42·7
1904-05 to 1908-09	257·0	141·0	116·0	45·1
1909-10 to 1913-14	296·0	163·7	132·3	44·7
1914-15 to 1918-19	371·3	211·1	160·2	43·1

The financial year 1921-22 showed a total revenue of Rs. 5,83,16,071, an expenditure of Rs. 4,08,51,878, and a surplus of Rs. 1,74,64,193. The proportion of surplus to gross revenue was about 30.

Prospects.—The past work of the Forest Department has already borne fruit, not only in a steady rise of revenue but also in the improved condition of the forests resulting from careful protection and tending. Much has been done in the way of opening up the forests to regular exploitation; but there is still room for enormous development in this respect, for there are extensive areas of valuable forest as yet almost untouched, and these represent a vast capital locked up and not only lying idle but even deteriorating. Perhaps the two most pressing needs at present are the introduction of improved sylvicultural systems and the extension of roads and other export works to facilitate and cheapen extraction. These two must proceed simultaneously, since they are

inter-dependent, for it is obvious that timber and other produce can be extracted far more economically if it is available in large quantities within a limited radius than if it is scattered in small quantities over large tracts of country; indeed this question must often decide whether extraction is possible or not. Sylviculture teaches us how to effect this concentration and is therefore the bed-rock on which future results, financial and otherwise, must rest; it is of little avail to seek and develop new markets for timbers and other products if these cannot be produced in regular and sufficient quantities and extracted at a reasonable cost.

Bibliography.—Quinquennial Review of Forest Administration in British India for the period 1911-15 to 1918-19. (Simla: Government Press). A large number of bulletins and other publications has been issued by the Forest Research Institute, and of these a list can be obtained from the Superintendent, Government Printing, India, Calcutta.

RUBBER CULTIVATION.

The most important rubber-yielding tree found growing naturally in the Forests of India is *Picus elastica*, a very large tree of the outer Himalayas from Nepal eastwards, in Assam, the Khasia Hills and Upper Burma. It has also been cultivated in Assam in the Charduar plantation in the Tezpur Sub-Division, as also in the Kulsi plantation of the Gauhati Sub-Division in the Kamrup Division. There are also a number of other rubber-yielding trees found in the Indian and Burman forests from which rubber can be collected on terms quoted by Government. Attempts have been made to cultivate Para, Ceara and Castilla in various parts of India and Burma. In India proper the chief attempts were made on the west coast, about 180 acres being planted from 1908 onward at Gersoppa. Similar attempts have been made in Madras: but at present Para rubber is being grown as a commercial product rather in Burma than the rest of India.

The production of rubber in India is confined to Assam, Burma, and the Madras Presidency:—

	Acres.	No. of trees
Assam	4,681	137,430
Madras	12,022	1,636,476
Burma	29,544	4,911,399
Total	46,247	6,685,305

The yield of Assam plantations is relatively small and the number of trees to the acre is much less than in Madras and Burma. The outturn of Madras in 1913 was more than

double that of Burma, where most of the trees being less than six years old are not yet productive. All planting is stump planting about 9 to 12 months old. The trees can be tapped in four years from the date of planting. The average yield in Burma from 4 to 6 years old trees is 1½ to 3 lbs. per tree per year. The capital invested is from £22 to £25 per acre. The average cost of production is about 1s. 6d. to 1s. 10½d. per lb. The Government of India has now decided to collect annual statistics relating to the production of rubber.

There has been a steady development in the exports of rubber from India. There was in 1920-21 a record export of 14 million lbs. of rubber which was 11 per cent. above the previous year's although the demand created by the war had fallen off. This was chiefly due to the increased area tapped, namely, 69,000 acres which was estimated to yield nearly 14 million lbs. In 1921-22 the exports fell to 11 million lbs. the area tapped to 61,000 acres, and the yield to 9 million lbs. In 1922-23 Exports were 12 million lbs. Madras accounted for nearly 56 per cent. and Burma 44 per cent. of the total trade. The total production during the year is reported to be 11,820,286 lbs., as against 9,056,430, lbs. a year ago. There was a general increase in the year 1922-23 especially in Madras, Coorg and Cochin.

Bibliography.—For fuller details see "Dictionary of the Economic Products of India" and the abridged edition of the same published in 1908 under the title "The Commercial products of India" by Sir George Watts; and the "Commercial Guide to the Forest Economic Products of India" by R. S. Pearson, published by the Government Press, Calcutta, 1912.

MATCH FACTORIES.

Imports of matches in 1920-21 fell off from 15 to less than 12½ million gross in quantity and from Rs. 2.05 to Rs. 1.67 lakhs in value. In 1921-22 there was a rise in the value of the imports to Rs. 204 lakhs. This figure fell in 1922-23 to Rs. 1.62 lakhs. In the opinion of the Forest experts at Dehra Dun there is an abundance of raw material in this country for match manufacture.

Indian timbers for matches.—In an article on the Indian match industry which appeared in the *Indian Agriculturist* the woods of the following species are said to be employed in Burma for match splints: *Bombax insignis*, *B. malabaricum* (stimul), *Anthocephalus Cadamba* (kadam), *Sarcoccephalus coriatus*, *Spondias mangifera* (amra), and *Engelhardtia spicata* (palash). These woods are not the best for the purpose, but are those most easily procurable. There are other kinds of white wood, such as poplar, pine, willow, and alder, in abundant quantities, but they are difficult to extract and transport, and are therefore costly.

The attempts to manufacture matches in

India have not hitherto been attended with great success, but recently two well-equipped factories have been started in Burma which give promise of good results. One of these is in Rangoon and is owned by Chinese; the other is at Mandalay, and is under European management. Further investigations are said to be necessary in order to settle the question as to the most suitable woods to employ, and when these have been brought to a satisfactory conclusion it is thought that Burma will be able to produce matches of first-class quality. It may be added that in 1912, the latest year for which complete statistics are available, there were six match factories in India.

The Law in India prohibiting the importation of the old sulphur matches as from July 1st 1913, has not seriously affected the position of the Swedish manufacturers, as they were able to supply another "strike-anywhere" match to take the place of the kind then prohibited, but as the new kind is dearer to manufacture the prices have gone up, and are likely to rise still further.

PAPER MAKING.

There are five large paper mills in the country working on up-to-date Western lines, viz., at Titagarh, Kankinara and Raniganj in Bengal, the Upper India Couper Mills at Lucknow and the Reay Mill at Poona. There are also two smaller mills at Bombay and Surat which make only country paper, and there are one or two other mills which recently were not working. The five large mills have a large Government connection, as the greater part of Government orders for paper is placed in India.

During the past year an interesting experimental paper-making plant has been installed at the Government of India Forest Research Institute at Dehra Dun, Specially designed to incorporate a new system patented by Mr. Raitt, Cellulose Expert to the Government of India, the object of this plant is to test the various paper-making fibres which are available over vast forest and hill areas in India and Burma, and thus encourage the establishment of pulp and paper mills on a commercial scale.

After many delays the Carnatic Paper Mills Company commenced operations at Rajahmundry, on the Godavari river, during the year, and it is estimated that the daily output will be ten tons of pulp and five tons of paper made from bamboos and paddy straw. In Southern India the Sri Minakshi Paper Mills, established many years ago as a small concern in Travancore State, appears to have taken a new lease of life and has ordered a new plant capable of turning out fifteen tons of paper per day, whilst in Assam a new company has been formed and is said to be waiting for the arrival of its plant. At Chittagong a new plant for manufacturing paper pulp from bamboos has commenced operations whilst another company has obtained a comprehensive concession for Bhabbar grass in the Punjab and is erecting a factory near the headworks of the Western Jumna Canal, about 200 miles from Lahore.

The possibility of utilising the dense growths of bamboo in the hinterland of Cuttack has again been under consideration during the year, and the project has been investigated afresh by Mr. Raitt on behalf of the Government of Bihar and Orissa. Mr. Raitt estimates that in this area alone there is sufficient raw material for an output of 10,000 tons of paper pulp per annum.

Raw Materials.—The existence of the local industry depends chiefly on the supply of Sabai grass which on account of unfavourable seasons sometimes yields short crops. It is of great importance, therefore, to look for materials according to a constant outturn, and various reports have been published on the available paper-making materials. Considerable attention has been devoted to **Bamboo**, since 1875 when it was found that this plant—of which there are four chief varieties in India—yielded a fibrous paper stock which made a quality of paper superior to esparto grass and at a considerably less cost. It was at that time estimated that one acre of bamboo would yield 10 tons of dried stems equivalent to 6 tons of merchantable cellulose. In 1905 Mr. R. W. Sindall was invited by Government to visit Burma with a view of enquiring into the possibility of manu-

facturing paper pulp. His report on the subject appeared in March 1906. He made numerous experiments with bamboo and woods of Burma and laid down lines along which further enquiry should be made. Subsequently Mr. W. Raitt, a pulp expert, was engaged at the Forest Research Institute in conducting tests on the treatment of bamboos by the soda and sulphate processes, the treatment of bamboo before boiling, with remarks on the utilisation of nodes and internodes. His results were embodied in the "Report on the investigation of Bamboo or Production of Paper-pulp," published in 1911. Mr. R. S. Pearson of the Forest Service, Dehra Dun, as the outcome of enquiries made throughout India published in 1912 a note on the Utilization of Bamboo for the manufacture of Paper-pulp. The yield per acre from bamboo is larger than that of grasses usually used for paper. The cost of working into pulp has been estimated to yield a product cheaper than imported unbleached spruce sulphite and unbleached sabai grass pulp. In 1915 Mr. Dhruva Sumanas published a pamphlet, *Dendrocalamus Strictus* Bamboo of the Dangs, as the result of investigations carried on in Bansda State.

In a paper read before the Royal Society of Arts in 1921 Mr. Raitt gave an answer to the question: "What India can do to fill the gap in the world's shortage of paper?" He said that he thought it was "a modest estimate to say that from bamboo, taking only that which is available under 'possible' manufacturing conditions, Burma, Bengal and South West India could produce ten million tons of pulp per annum, and Assam from Savannah grasses three million. India could therefore produce pulp for the whole world."

The leading Indian paper grass for the last thirty years has been the bhab, bhabar, or sabai grass of Northern India. It is a perennial grass plentiful in drier tracts from Chota Nagpur and Rajmahal to Nepal and Garhwal. The Calcutta mills draw their supplies from Sahibganj, Chota Nagpur and the Nepal Terai. The quantity annually exported from Sahibganj is between three to four lakhs of maunds. The cutting in these districts is said to commence in October when the plants are six or seven feet high. Sabai grass yields from 30·6 to 45·5 per cent. of bleached cellulose. A report by Mr. R. S. Pearson, Forest Economist, Dehra Dun, on the use of elephant grasses in Assam was issued in 1919. The most important species of grass found in the areas in which investigation has been made are Khagra (*Saccharum spontaneum*) and Batta (*Saccharum narenga*), with patches of Nai (*Phragmites karka*) on the more swampy ground. Hand samples of the above grasses were sent to England to be tested on a laboratory scale, while several tons were sent to an Indian paper mill to be made into paper. The results were satisfactory and proved that a very fair quality of paper can be produced from these grasses at a relatively low price. Small samples of such paper can be obtained by persons interested in these grasses from the Forest Economist, Forest Research Institute, Dehra Dun, who can also supply further details.

(a) Export values.

The feature which stands out most prominently in a survey of the mineral industries of India is the fact that until recent years little has been done to develop those minerals which are essential to modern metallurgical and chemical industries, while most striking progress has been made in opening out deposits from which products are obtained suitable for export, or for consumption in the country by what may conveniently be called direct processes. In this respect India of to-day stands in contrast to the India of a century ago. The European chemist armed with cheap supplies of sulphuric acid and alkali, and aided by low sea freights and increased facilities for internal distribution by the spreading network of railways has been enabled to stamp out, in all but remote localities, the once flourishing native manufactures of alum, the various alkaline compounds, blue vitriol, coppers, copper, lead, steel and iron, and seriously to curtail the export trade in nitre and borax. The reaction against that invasion is of recent date. The high quality of the native-made iron, the early anticipation of the processes now employed in Europe for the manufacture of high-class steels, and the artistic products in copper and brass gave the country a prominent position in the ancient metallurgical world, while as a chief source of nitre India held a position of peculiar political importance until, less than forty years ago, the chemical manufacturer of Europe found among his by-products, cheaper and more effective compounds for the manufacture of explosives.

With the spread of railways, the development of manufactures connected with jute, cotton and paper, and the gradually extended use of electricity the demand for metallurgical and chemical products in India has steadily grown. Before long the stage must be reached at which the variety and quantity of products required, but now imported, will satisfy the conditions necessary for the local production of those which can be economically manufactured only for the supply of groups of industries.

Coal.

Most of the coal raised in India comes from the Bengal and Bihar and Orissa—Gondwans coal-fields. Outside Bengal and Bihar and Orissa the most important mines are those at Singareni in Hyderabad, and in Central Provinces but there are a number of smaller mines which have been worked at one time or another

Provincial production of coal during the years 1921 and 1922.

Central Provinces	712,914	675,916
Punjab	67,242	67,180
Total	18,397,671	18,191,820

There is no doubt that India is not producing sufficient material for her industries owing to a variety of reasons, the principal of which are (1) the reduction of output as a first result of increased wages and (2) shortage of wagons, lack of siding accommodation and general transport difficulties. The first cause will be an extremely difficult one to remedy, as it has been found that increased earnings were not used by the workers to improve their conditions of life but were merely an incentive to increasing idleness. The railway difficulties will probably be removed during the next few years now that the railways are committed to a large capital expenditure programme, much of which will be utilised for the rehabilitation of rolling-stock and the supply of sidings and extra marshalling facilities.

IRON ORE.

Bengal and Bihar and Orissa are the only provinces in India in which iron ore is mined for smelting by European methods. Iron smelting, however, was at one time a widespread industry in India and there is hardly a district away from the great alluvial tracts of the Indus, Ganges and Brahmaputra in which slag heaps are not found. The primitive iron smelter finds no difficulty in obtaining sufficient supplies of ore from deposits that no European ironmaster would regard as worth his serious consideration. Early attempts to introduce European processes for the manufacture of pig-iron and steel were recorded in 1830 in the South Arcot District. Since that date various other attempts have been made but none proved a success before that now in operation near Barakar in Bengal. The site of the **Barakar Iron-Works** was originally chosen on account of the proximity of both coal and ore supplies. The outcrop of iron stone-shales between the coal-bearing Barakar and Raniganj stages stretches east and west from the works, and for many years the clay ironstone nodules obtainable from this formation formed the only supply of ore used in the blast furnaces. Recently magnetite and hematite have been obtained from the Manbhum and Singhbhum districts, and the production from the last named district has largely replaced the supplies of ore hitherto obtained near the iron-works. The Bengal Iron and Steel Company, Limited, have now given up the use of ore obtained from the neighbourhood of Barakar and Raniganj and are now obtaining most of their ores from the Kolhan Estate, Singhbhum. Some years ago the Bengal Iron Steel Co., Ltd., secured two deposits of iron-ore in Saranda (Singhbhum) forming parts of two large hill masses known as Notu Burn and Buda Burn respectively. Recent prospecting in this part of Singhbhum has led to the discovery of numerous additional deposits of iron-ore, the extension of which has been traced into Keonjhar and Bonal States in Orissa, a total distance of some 40 miles in a S. S. W. direction. At Pansira Burn, a portion of Notu Burn, the deposit has been opened up, and now feeds the Barakar ironwork. Pansira Burn rises to over 2,500 feet above sea level, the low ground on the west side being at about 1,100 feet above sea-level. The uppermost 400 to 450 feet of this hill has now been

opened up, and the workings indicate the existence of a deposit about a quarter of a mile long, perhaps 400 feet thick and proved on the dip for about 500 feet. The ore body appears to be interbedded with the Dharwar slates, from which it is separated by banded hematite-jaspers. The ore itself is high-grade micaceous hematite, often lateritised at the outcrop. Cross-cuts into the interior of the deposit show that the hematite becomes very friable not far below the outcrop. In fact the characteristics of this ore, including the surface lateritisation, are almost exactly reproduced in the iron-ore deposits of Goa and Ratnagiri. The **Tata Iron and Steel Company** at Sakchi possesses slightly richer and purer ore-bodies in the Raipur district, supplies of ore are at present drawn from the deposits in Mayurbhanj. The ore-deposits have all been found to take the form of roughly lenticular leads or bodies of hematite, with small proportions of magnetite, in close association with granite on the one hand and granitic rocks on the other. These latter have been noted in the field as charnockites, the term being employed, rather loosely no doubt, but probably in the main correctly, to cover types of pretty widely varying acidity. In still more intimate association with the ores than either of the foregoing were found masses of dense quartz rocks, frequently banded, and banded quartz-iron-ore rocks. These last are of the types so commonly associated with Indian iron-ores, but are here not so prominent as is usually the case.

Output.—There was an increase in the output of iron-ore of about 70 per cent. viz. from 558,005 tons valued at Rs. 11,81,628 (£118,163) to 942,084 tons, valued at Rs. 21,08,329 (£140,555). This increased production was due largely to the increased activity of the Tata Iron and Steel Company, Limited, who blew in their third blast furnace (the Batelle furnace) in August 1919, the full effect of which was not felt until 1921 when the company produced 281,541 tons of pig iron, 125,336 tons of steel including rails, and 3,076 tons of ferro-manganese. The Bengal Iron Company record a slightly smaller output than in the preceding year, viz., 86,445 tons of pig iron and 27,219 tons of cast iron castings, with no production of ferro-manganese.

MANGANESE ORE.

This industry commenced some thirty years ago by quarrying the deposits of the Vizagapatam district, and from an output of 674 tons in 1892, the production rose rapidly to 92,008 tons in 1900 when the richer deposits in the Central Provinces were also attacked, and are now yielding a larger quantity of ore than the Vizagapatam mines. India now alternates with Russia as the first manganese-producing country in the world. The most important deposits occur in the Central Provinces, Madras, Central India, and Mysore—the largest supply coming from the Central Provinces. The uses to which the ore is put are somewhat varied. The peroxide is used by glass manufacturers to destroy the green

colour in glass making, and it is also used in porcelain painting and glazing for the brown colour which it yields. The ore is now used in the manufacture of ferromanganese for use in steel manufacture. Since 1904, when the total output was 150,190 tons, the progress of the industry has been remarkable owing to the high prices prevailing. In 1905 production reached 247,427 tons; the following year it was more than doubled (571,495 tons), and in 1907 the figures again rose to 902,291 tons. In 1909, on account of the fall in prices the output contracted to 642,675 tons, but it almost regained its former position in 1910 when the production rose to 800,907 tons. In 1911 it fell to 670,290 tons. In 1916 the output was

645,204 tons valued f. o. b. at Indian Ports at £1,487,026. The ore raised in the Central Provinces is of a very high grade, ranging from 50 to 54 per cent. of the metal, and in consequence of its high quality is able to pay the heavy tax of freight over 500 miles of railway, besides the shipment charges to Europe and America, for the whole of the ore is exported to be used principally in steel manufacture in the United Kingdom, Germany, and the United States.

Manganese was one of the minerals which were largely affected by the war, the exports being restricted almost entirely to consignments to the United Kingdom, with a comparatively small quantity to the United States; the quantity produced in 1920 amounted to 736,439 tons, as compared with 537,995 tons in the previous year. In 1921 the output was 679,286 tons valued at £1,537,068 f. o. b. at Indian ports.

GOLD.

The greater part of the total output of gold in India is derived from the Kolar gold field in Mysore. During the last decade the production of this mine reached its highest point in 1905 when 610,758 ounces were raised. In 1906 the quantity won was 565,208 ounces and this figure fell to 535,085 ounces in 1907. The figures for the latter years reveal a small improvement. The Nizam's mine at Ilutti in Hyderabad comes next, but at a respectable distance, to the Kolar gold field. This mine was opened in 1903. The only other mines from which gold was raised were those in the Dharwar district of Bombay and the Anantapur district of Madras. The Dharwar mines gave an output of 2,993 ounces in 1911 but work there ceased in 1912. The Anantapur mines gave their first output of gold during the year 1910, the amount being 2,532 ounces, valued at Rs. 1,51,800. Gold mining was carried on in the North Arcot district of Madras from 1893 till 1900, the highest yield (2,854 ounces) being obtained in the year 1898. The Kyaukpazat mine in Upper Burma was worked until 1903, when the pay chute was lost and the mine closed down. In 1902 dredging operations were

started on the Irrawaddy river near Myitkyina, and 216 ounces of gold were obtained in 1904; the amount steadily increased from year to year and reached 8,445 ounces in 1909, but fell in subsequent years until, in 1922, it was no more than 24 oz. The small quantity of gold produced in the Punjab, the Central Provinces, and the United Provinces is obtained by washing. Gold washing is carried on in a great many districts in India, but there is no complete record of the amount obtained in this way. The average earnings of the workers are very small, and the gold thus won is used locally for making jewellery.

The continuous decrease in the output of gold in India from the maximum production of 616,728 ozs. reached in 1915, continued during the year 1921, when the total output of gold was 432,723 ozs., valued at £2,050,576, as compared with an output of 499,068 ozs., valued at £2,733,115 in the previous year. This decrease was due partly to the cessation of operations of the Hatti (Nizam's) Gold Mines, Limited, and to a decrease of some 50,000 ozs. from the gold mines of Kolar.

PETROLEUM.

Petroleum is found in India in two distinct areas—one on the east, which includes Assam, Burma, and the islands off the Arakan coast. This belt extends to the productive oil fields of Sumatra, Java, and Borneo. The other area is on the west, and includes the Punjab and Baluchistan, the same belt of oil-bearing rocks being continued beyond the borders of British India to Persia. Of these two the eastern

area is by far the most important, and the most successful oil fields are found in the Irrawaddy valley. Yennangyaung is the oldest and most developed of these fields. Native wells have been at work here for over 100 years, and in 1886, prior to the annexation of Upper Burma, the output is estimated to have averaged over 2 million gallons a year. Drilling was begun in 1887. The Yennangy field yielded a very

small supply of petroleum before 1891, in which year drilling was started by the Burma Oil Company. Singu now holds the second place among the oil fields of India. Petroleum was struck at the end of 1901, and in 1903, 5 million gallons were obtained. In 1907 and 1908 the production of this field was 43 million gallons, and after a fall to 31½ million gallons in 1910 it rose to 56½ million gallons in 1912. Several of the islands off the Arakan coasts are known to contain oil deposits but their value is uncertain. About 20,000 gallons were obtained from the eastern Barongo Island near Akyab, and about 37,000 gallons from Ramri Island in the Kyaukpyn district during 1911. Oil was struck at Minbu in 1913, the

production for that year being 18,320 gallons which increased to nearly 4 million gallons in 1912. The existence of oil in Assam has been known for many years and an oil spring was struck near Makum in 1867. Nothing more, however, was done until 1883, and from that year up till 1902 progress was slow. Since that year the annual production has been between 2½ and 4 million gallons.

On the west, oil springs have been known for many years to exist in the Rawalpindi and other districts in the Punjab. In Baluchistan geological conditions are adverse, and though some small oil springs have been discovered, attempts to develop them have not hitherto been successful.

Imports of **Kerosine Oil** amounted in 1913-14 to 68,850,000 gallons. This figure fluctuates considerably from year to year, having risen in 1919-20 as high as 94,135,000 gallons, and having fallen in 1920-21 to 57,192,000 gallons.

Amber, Graphite and Mica.—Amber is found in very small quantities in Burma, the output for 1922 being 26 cwt. valued at Rs. 16,840. Graphite is found in small quantities in various places but little progress has been made in mining except in Travancore. The total output in 1921 was 25 tons. India has for many years been the leading producer of mica, turning out more than half of the world's supply. In 1914, owing to the war, the output was only 33,180 cwt. compared with 43,650 cwt. in 1913. Owing to necessary restrictions with regard to the export of mica, the output fell off considerably in the year 1915, but subsequent demand in the United Kingdom for the best grade of ruby mica led to a considerable increase in production during the following years. The declared output of mica in 1921 shows a decrease of nearly 14,000 cwt., over that of the previous year, having dropped from about 76,517 cwt. valued at Rs. 1,06,54,380 in 1920 to 30,944 cwt. valued at Rs. 63,94,113 in 1921.

Tin, Copper, Silver and Lead.—The only persistent attempt to mine tin is in Burma. The output was for some time insignificant but rose in 1913 to 116 tons valued at £46,000

which fell to £38,000 in 1914. In 1922 Burma yielded 217·87 tons. Copper is found in Southern India, in Rajputana, and at various places along the outer Himalayas, but the ore is smelted for the metal alone, no attempt being made to utilize the by-products. After a set-back the industry recovered in 1920 and the output in 1921 was 23,030 tons valued at £32,560. The only **Lead** mine of any importance being worked in the Indian Empire is that of Bawdwin, where a very large body of high-grade lead-zinc-silver ore has now been blocked out. For many years the smelting operations of the Company were directed to recovering lead and silver from the slags left by the old Chinese miners. Those slags, however, are now practically exhausted, and the mine has reached a stage of development at which a steady output of ore is assured. In 1922 the output was 39,214 tons valued at Rs. 1,41,71,392.

Silver is obtained as a by-product in the smelting of the lead-zinc ores of Bawdwin. The total output in 1922 was 4,205,584 oz. valued at Rs. 1,00,39,362.

Zinc.—A monograph on zinc ores issued by the Imperial Institute in 1917 says that during the past fifty years zinc ores have received but little attention in India, and no production was recorded until 1913. In 1914 the production was 8,553 tons, and although the

output fell to 196 tons in 1915, there is a prospect of India becoming an important producer of zinc ore in the future. Important silver-lead-zinc deposits occur at Bawdwin, in Tawngpeng State, one of the Northern Shan States in Upper Burma. The mines are connected with the Mandalay-Lashio Branch of the Burma railways by a narrow-gauge line 51 miles long, the lines meeting at Manhpwe, which is about 544 miles from Rangoon. They were worked for many centuries by the Chinese for silver, and have long been known to contain zinc ore; until recently, however, no serious attempt appears to have been made to market the ore for its zinc values. In 1907 the present undertaking was started by the Burma Mines, Ltd., with the idea of recovering the lead from the old slag heaps left by the Chinese, estimated at 125,000 to 160,000 tons, and later to work the deposit. Smelting operations on these slags were first carried out at Mandalay, but later the works were transferred to Namtu, about 13 miles below the mines on the narrow-gauge railway. The deposits, which comprise an area of about 2,500 acres, have now been taken over by the Burma Corporation, Ltd., and one is being worked.

Gem Stones.—The only precious and semi-precious stones at present mined in India are the diamond, ruby, sapphire, spinel, tourmaline, garnet, rock-crystal, agate, cornelian, jadeite and amber. Amber has already been referred to; of the rest only the ruby, sapphire and jadeite attain any considerable value in production and the export of the latter has declined owing to the disturbances in China, which is the chief purchaser of Burmese jadeite. The output of diamonds is comparatively unimportant. The output of the ruby mines in 1922 was 231,160 carats valued at Rs. 7,27,312. In 1922 an exceptionally valuable ruby of nearly 23 carats was found which is of such rare size and quality that it is anticipated it will fetch several thousand pounds sterling.

Wolfram.—Owing to the continued depression in the wolfram market, Tungsten ore is now nowhere extracted except in the Tavoy District, where it occurs chiefly as a constituent of mixed concentrates. The total for that district, includes 312 tons of mixed tin and wolfram ore and shows for 1922 an increase of about 45 tons over the output in 1921. This increase is ascribed to the fact that a scheme was in force in the district throughout the year, whereby the Local Government suspended the levy of dead rent and royalty and guaranteed bank advances to mine-owners in respect of mixed tin and wolfram concentrates.

Radio-active Minerals.—The General Report of the Director of the Geological Survey of India for 1913 includes a brief report by R. C. Burton on an occurrence of pitchblende at mica mines near Singar, Gaya district, Bengal. The pitchblende occurs as rounded nodules in a pegmatite that is intrusive in mica schists. Other minerals occurring in the pegmatite are mica, tripelite, ilmenite, tourmaline, and uranium ochre; whitish columbite, zircon, and torbernite have also been recorded. Of these minerals tripelite is stated to be the commonest.

The importance of the find of uranium oxide impregnating the tripelite led to the discovery of weathered pitchblende, and as the pits were deepened the weathering became less and less until pure pitchblende was obtained. In the six months from July 1913 to February 1914, eight hundredweight of pitchblende was obtained from Abrakhi Hill together with six tons of uranium earth debris, five to six hundred tons of tripelite and two tons of tantalite. These ores were raised under a prospecting license in respect of Abrakhi Hill alone and in March 1914, a mining lease for thirty years was obtained in respect of sixty square miles of the Singar estate. The first intention was to work only the five square miles round Abrakhi and a syndicate was formed for this purpose, which on the outbreak of war, was refused a Trading License on account of the German element in it.

Labour in Mines.

The question of the labour supply presents difficulties which are not encountered in countries where mining is a special calling. The majority of the persons working at the Indian coal mines are agriculturists, and the supply of labour, as experience has recently shown, depends to a material extent on the condition of the agricultural industry. "The major portion of those employed," says a report by the Department of Statistics, "are the aboriginal Dravidians from the mountainous country of Chota Nagpur and the Central Provinces, but a large number of other castes is also employed, particularly in the outlying fields. The majority of the workmen follow the vocation of agriculture as well as mining and return to their homes during the period of sowing and reaping, the result being that at such times the output of many of the mines is greatly restricted. At the Makum collieries of the Assam Railway and Trading Company, where the labour question continues to be a very difficult one, nearly a third of the total labour force are Mekanis, Chinese, and Nepalese. The Chinese have, however, proved unsatisfactory, and it is unlikely that they will in future be recruited." With the increase in the depth of working the need for a skilled mining class will become accentuated, and if the price of coal remains at a sufficiently high level, further development in the introduction of coal-cutting plants may take place. During the period of high prices some nine years ago cutting plants were introduced in order to augment the output. These worked successfully, but the cost proved to be high and as labour conditions improved the machines were discarded.

Inspection of Mines.

During the year 1922 the daily average number of persons working in and about the mines regulated by the Indian Mines Act was 228,511, as compared with 249,663 in the previous year. This is a decrease of 21,152 persons or 8.47 per cent. Of these persons 137,017 worked underground and 91,494 on the surface.

142,103 were adult males, 78,806 were adult females and 7,602 were children under 12 years of age.

Accidents.—During the year 1922, at mines regulated by the Indian Mines Act, 1901, there were 205 fatal accidents, being a decrease of 27 on the number which occurred in 1921, and a decrease of 4 on the average number in the preceding five years.

These accidents involved the loss of 243 lives or 50 less than in 1921. Of these persons 218

were males and 25 females. In three separate accidents the number of lives lost was 13, 8 and 4 respectively. In four cases three lives, and in seven cases 2 lives were lost. There were in addition 292 serious accidents involving injuries to 300 persons. The subsequent remarks under this heading refer only to fatal accidents.

The causes of these accidents have been classified as follows:—

Cause.	Number of accidents.	Percentage of total number of accidents.
Misadventure	120	58·54
Fault of deceased	61	29·76
Fault of fellow-workmen	9	4·39
Fault of subordinate officials	7	3·41
Fault of management	6	2·93
Faulty material	2	0·97
Total ..	205	100·00

There was an improvement in respect of accidents from falls of roof and sides. There were 109 such accidents, as compared with 136 in 1921. Many of them were due to persons working in prohibited places, and frequently the victims had deliberately broken down or passed through a fence. The exercise of more vigilance by the supervising staff would have prevented many of these accidents. In some cases the supervising staff was insufficient in number. Twenty-one fatal accidents causing the loss of twenty-six lives occurred in quarries and surface cuttings.

There were more accidents in shafts. The number was 26, as compared with 17, in the previous year. Two of these accidents were due to overwinding and one involved the loss of eight lives. Another accident was due to the fall of a guide rope which was being fitted in a shaft and in this accident three persons were killed.

Accidents on haulage roads were fewer. There were 20 such accidents, as compared with 30 in 1921.

There were five fatal explosions of firedamp causing twenty-one deaths. One of these occurred in a thin seam in a long-wall face and caused the death of thirteen persons. Another, which occurred in narrow gallery workings, caused the death of four persons.

The number of accidents from explosives decreased from 14 in the previous year to 9 in 1922. Nine lives were lost. Most of these accidents were due to carelessness in the handling and use of gunpowder.

There were three accidents caused by electricity.

The Indian Electricity Rules which include a comprehensive code of rules regulating the use of electricity in mines were brought into operation on 31st July 1922. The Electric Inspector of Mines, after a close inspection of most of the electric plant in the provinces

of Bengal and Bihar and Orissa, reported that many of the installations were on modern lines and required little or no alteration to bring them into compliance with the rules. In some of the older installations considerable improvements have been effected, mine owners generally being ready to comply with the new requirements.

The death rate per thousand persons employed above and below ground was 1·06 while that of the preceding five years was 1·08. At coal mines only these figures were 1·13 and 1·18 and at mines other than coal 0·77 and 0·76. At all mines in the United Kingdom during the ten years ending with and including 1920 the average death-rate per thousand persons employed underground was 1·36 as compared with 1·46 for all Indian mines.

The death-rate per million tons raised at coal mines was 11·50 while that of the preceding five years was 11·12. At coal mines in the United Kingdom, during the ten years ending with and including 1919 the death-rate per million tons raised was 5·13.

Deaths occurring in each class of mines were as follows: 209 in coal mines, 7 in salt mines, 2 in wolfram mines, 3 in mica mines, 5 in tin mines, 8 in silver-lead mines, 5 in manganese mines, 1 in a gold mine and 3 in an iron mine.

Twenty-one persons lost their lives by explosions of gas, 57 by falls of roof, 65 by falls of side, 35 in shafts, 9 by explosives, 20 by haulage, 11 by other accidents underground, and 25 on the surface.

Monographs on Mineral Resources published by the Imperial Institute.

CHEMICAL SERVICES COMMITTEE.

The Chemical Services Committee, which was appointed by the Government of India in October 1919, under the Presidentship of Professor J. B. Thorpe, issued its report and made its recommendations in 1920.

The terms of reference to the Committee were:—

(1) To consider whether an All-India Chemical Service is the best and most suitable method of overcoming the difficulties and deficiencies pointed out by the Indian Industrial Commission. (2) In the event of the Committee approving the principle of an All-India Service, to devise terms of recruitment, employment and organisation; to indicate the extent to which chemists already in Government employ should be included in that service; and to suggest what should be the relations of the proposed organisation with the public and with Departments of the Government of India and of Local Governments. (3) In particular to frame proposals for the location, scope and organisation of institutions for chemical research.

The following is a summary of the chief recommendations:—

(1) That a chemical service should be constituted.

(2) That the service should be called the Indian Chemical Service.

(3) That the service should be controlled by a Director-General.

(4) That a Central Imperial Chemical Research Institute should be erected at Dehra Dun under the Director-General of the Chemical Services as Director, assisted by a number of Deputy Directors.

(5) That each Deputy Director should be in charge of a separate Department and that, in the first instance, there should be four Departments, (a) Inorganic and Physical Chemistry, (b) Organic Chemistry, (c) Metallurgical Chemistry, (d) Analytical Chemistry.

(6) That a Provincial Research Institute under the control of the Local Government should be erected in each Province near the chief seats of industry in that Province, and that each Provincial Research Institute should be under a Director of Research.

(7) That the functions of the Central Imperial Institute should be as follows:—

To create new industries and to carry out the development of new processes up to the "semi-large" scale, or further if necessary: to investigate those problems of a fundamental character, arising from the work of the Provincial Institutes, which have been transferred to the Central Institute by the Local Director of Research in consultation with the Director General. Such problems will be those which have no apparent immediate practical importance, but which in the opinion of the Director-General and the Director of Research are likely to lead to discovery of fundamental industrial importance affecting the industries of the country generally assist in the co-ordination of the work in progress in the Provinces, both by means of personal discussion between the officers of the Central

and Provincial Institutes during the course of the tours made by the Director-General and the Deputy Directors, and by means of periodical conferences of Provincial and Imperial officers to carry out such analytical work as may be required and to correlate the methods of analysis in general use throughout the country; to maintain a Bureau of Information and Record Office; and to issue such publications as are considered necessary.

(8) That the functions of the Provincial Research Institutes should be as follows:—

To maintain close touch with the works chemists and with the works generally and to work out any problems which may be submitted to them; to develop and place on an industrial scale new industries which have been previously worked out on the laboratory and "semi-large" scale by the Central Imperial Institute; to carry out such other work as may be necessary to establish and foster new industries peculiar to the Province; to carry out such analytical work of a chemical character as may be required in the Province, and to erect and control substations in such parts of the Province as the development of industry may require.

(9) That, under 8 above, arrangements should be made by which a firm supplying a problem should have the use of the solution for an agreed period of time prior to its publication.

(10) That members of the service should be lent to private firms as occasion demanded and should during the period of their service be paid an agreed sum by the firms.

(11) That the Research Institutes should not undertake manufacture in competition with private enterprise, but that chemical industries developed in accordance with 8 above should be handed over to private firms as soon as practicable.

(12) That whenever necessary experts, should be employed to establish chemical industries based on known processes.

(13) That the work of the Central Imperial Institute should be controlled by a Board of which the Director-General will be Chairman and which will comprise the Deputy Directors and such other persons as the Government of India may determine.

(14) That the Central Imperial Institute should have no administrative control over the Provincial Research Institute, but that no appointment as Director of Research should be made without consulting the Director-General.

(15) That the Director-General and Deputy Directors should visit Provincial Research Institutes periodically and co-ordinate the work done in each.

(16) That chemists employed at Provincial Research Institutes should be appointed in the first instance by the Local Government in consultation with the Director of Research and the Director-General.

(17) That chemists so appointed should be members of the Chemical Service and should be seconded for service under the Provincial Governments and be paid by them.

(18) That agricultural chemists should not at present be included in the service.

(19) That a Ministry of Science should be created as soon as practicable.

(20) That the Deputy Director in charge of Analytical Chemistry should co-ordinate the methods of analysis in use throughout India and should act in an advisory capacity to the various Provincial Government Analysts who should be attached to each Provincial Research Institute.

(21) That Provincial Government Analysts should be under the control of the Directors of Research and should take over the chemical work now carried out by the Chemical Examiner and the Government Test House.

(22) That the question of the connection of the Indian Institute of Science, Bangalore, with

the Chemical Service should await proposals from the Council of the Institute.

(23) That a Bureau of Information and Record Office, a Library, and a Museum should be attached to the Central Imperial Institute and to each Provincial Research Institute.

(24) That a **Chemical Survey of India** should be carried out at the earliest possible moment.

(25) That the Government of India should give maintenance and equipment grants to students to enable them to undergo the training in chemical research required for recruitment.

(26) That liberal grants, free from the customary accounts, restrictions, should be given for the initiation of the scheme and for the development of industries through the medium of chemical research.

Action on this report has been suspended.

CREMATION.

Cremation as a means of disposing of the dead is commonly adopted throughout India by the Hindus, but has been little adopted among the Europeans in India. A crematorium was started some years ago in Calcutta close to the Lower Circular Road Cemetery, at a cost of Rs. 40,000. But the return for this expenditure is disappointing. Only five or six cremations take place in Calcutta each year, in spite of the fact that the fee for cremation has been fixed by the Cremation Society of Bengal at the very low figure of Rs. 30,

subject to reductions in the case of poor families. The reason for this is thought to be that, when possible, Europeans go home to die, and the Native Christians and Eurasians are very largely Roman Catholics among whom a prejudice exists against this form of the disposal of the dead. In Bombay arrangements have recently been made for a small area in the Sewri Cemetery to be walled in, and for cremations to be carried on within it in the primitive style of the country, but in such a way as to preserve the ashes.

The Opium Trade.

Two descriptions of opium must be distinguished. *Bengal* opium which is manufactured from poppy grown in the United Provinces; and *Malwa* opium which is almost entirely produced in certain Native States in Central India and Rajputana.

Bengal Opium.—Cultivation of poppy is only permitted under license. The cultivator to whom advances are made by Government free of interest is required to sell the whole of his production to the Opium Factory at Ghazipur at a rate fixed by Government, now Rs. 7/8 per seer of 70° consistency. The area licensed for cultivation has in recent years been much reduced as a consequence of the agreement between the Government of India and the Chinese Government, and is now restricted to the United Provinces. The following are the figures of the area under cultivation and of production in 1917-18: Bighas cultivated, 331,216; Gross produce in Maunds, 32,321; number of chests manufactured, 25,146. At the Factory two classes of opium are manufactured:

(1) "Provision" opium intended for export to foreign countries. This opium is made up in balls or cakes, each weighing 3½ lbs., 70 cakes weighing 140½ lbs. being packed in a chest.

(2) "Excise" opium intended for consumption in British India. This is made up in cubic packets, each weighing one seer, 60 packets being packed in one chest. It is of higher consistency than "provision" opium.

"Provision" opium is sold by public auction in Calcutta, the quantity to be sold being fixed by Government. This quantity has been reduced in recent years in accordance with the agreement with China, the figures being 15,440 chests in 1911 and 6,700 chests in 1912. Exports to China have been stopped altogether since 1913.

Malwa Opium.—The poppy from which Malwa opium is manufactured is grown chiefly in the Native States of Indore, Gwalior, Bhopal, Jaora, Dhar, Rutlam, Mewar and Kotah. The British Government has no concern with the cultivation of the poppy, or the manufacture of the opium; but it used to regulate, before exports to China were stopped, the import of Malwa opium into, and the transport through, its territories. As the chief market for Malwa opium was China, and as the States in which the drug is produced had no access to the sea, except through British territory, the British Government were able to impose a duty on the importation of the drug on its way to Bombay for exportation by sea.

No statistics of cultivation or production are available. The poppy is sown in November, the plants flower in February, and by the end of March the whole of the opium has been collected by the cultivators who sell the raw opium to the village bankers. It is then bought up by the large dealers who make it up into balls of about twelve ounces and store it until it is ready for export, usually in September or October. The opium is of 90° to 95° consistency and is packed in half chests: con-

siderable dryage took place in the case of new opium while transported to Bombay.

Sales of Malwa opium for export to China have ceased since January 1913 and the trade has become extinct since 17th December of that year when the last shipment was made. Practically the whole of the Malwa opium exported from Bombay went to China. There is no market for it in the Straits Settlements. A few chests annually are shipped to Zanzibar.

Revenue.—The revenue derived by the Government of India from opium in recent years is as follows:—

	£
1915-16	1,913,514
1916-17	3,160,005
1917-18	3,078,903
1918-19	3,229,000
1919-20	2,088,000
	Rs.
1920-21	3,72,85,000
1921-22	3,03,24,000
1922-23	3,98,68,000
1923-24 (Budget estimate) ..	3,93,12,000

Agreement with China.—The fluctuations in the revenue derived from opium are directly attributable to the trade conditions arising out of the limitation of opium exports. In 1907 being satisfied of the genuineness of the efforts of the Chinese Government to suppress the habit of consuming opium in China, the Government of India agreed to co-operate by gradually restricting the amount of opium exported from India to China. In 1908 an arrangement was concluded by which the total quantity of opium exported from India was to be reduced annually by 5,100 chests from an assumed standard of 67,000 chests. Under a further agreement, signed in May 1911, the cessation of the trade was to be accelerated on evidence being shown of the suppression of the native production of opium in China, and in accordance with this agreement a further limitation was placed on exports to Chinese ports. The reduction of exports led to an increase in the price of the drug in China and a corresponding rise in the price obtained in India at the auction sales. For some considerable time, however, in 1912 the trade in China was paralysed by the imposition by Provincial Governors in defiance of instructions from the Central Government of restrictions on the importation and sale of Indian opium. Stocks accumulated rapidly at Shanghai and Hongkong and the position in December 1912 had become so acute that a strong and influential demand was made on the Government of India to relieve the situation by the suspension of sales. Sales were accordingly postponed both of Bengal and Malwa opium and in order to afford the Malwa trade the most complete relief, the Government of India undertook to purchase for its own use 11,253 chests of Malwa opium which remained to be exported in 1913. The present position is that the export trade to China has ceased since 1913.

GLASS AND GLASSWARE.

The total value of the glass and glassware imported into India in 1922-23 amounted to Rs. 260 lakhs compared with Rs. 222 lakhs in the previous year. The imports of glassware in India are showing an upward tendency, they being in 1913-14 over Rs. 190 lakhs in value, i.e., over the quinquennial average of Rs. 161 lakhs. Austria Hungary and Germany before the outbreak of the war exported bangles, beads, bottles, funnels, chimneys and globes, etc., to the value of Rs. 116 lakhs in 1913-14. The value of average imports from the enemy countries during the five pre-war years was Rs. 93 lakhs or about 57% of the trade. With their disappearance from the Indian market, imports from Japan increased to 71% from 8%, the pre-war average. United Kingdom increased her shipments of sheet and plate glass, which before 1914 came largely from Belgium. Japan, however, could not meet the Indian demand, and hence renewed and pioneer efforts were made in India to satisfy the needs of the Indian consumer. After the war imports from what was the Dual Monarchy quickly revived.

Manufacture of Glass in India.—Glass was manufactured in India in centuries before Christ and Pliny makes mention of "Indian Glass" as being of superior quality. As a result of recent archaeological explorations, a number of small crude glass vessels have been discovered indicative of the very primitive stage of the industry. But no further traces of ancient Indian Glass Industry as such survive; yet, it is certain that by the sixteenth century it was an established industry producing mainly bangles and small bottles. The quality of the material was inferior and the articles turned out were rough. Beyond this stage, the industry had not progressed until the nineties of the last century. Manufacture of glass in India on modern European lines dates from the nineties of the last century, when some pioneer efforts were made in this line. Since then a number of concerns have been started, a number of them have failed, while some are still clinging to life owing to war conditions. They mainly devote themselves to the manufacture of bangles and lampware side by side with bottle-making on a small scale. This, therefore, is the criterion which determines the two well-defined classes of the industry in its present stage. (i) Indigenous Cottage Industry and (ii) the modern Factory Industry.

(i) The Indigenous Cottage Industry which is represented in all parts of the country, but has its chief centres in Firozabad District of U. P., and Belgauim District, in the South, is mainly concerned with the manufacture of cheap bangles made from "glass cakes or blocks" made in larger factories. The industry is at present in a flourishing state and supplies nearly one-third of the Indian demand for bangles. The quality has been improved by the discovery of new glazing processes and for the present

the turnover in this line has gone up to 20 lakhs of rupees a year. But these bangles have now to face a very hard competition from Japan whose "silky" bangles are ousting the old type Indian ones.

(ii) The modern Factory type of organization of this industry is just in its infancy at present. The existing factories either stop at producing glass cakes for bangle as in Firozabad or simple kind of lampwares and bottles. With the existing state of knowledge and machinery in India they can neither produce sheet and plate glass, nor do they pretend to manufacture laboratory or table glass. Artistic glassware is out of the question and the private capitalists who have to run their concerns mostly with commercial ends do not think it worth their while to spend money and labour on it. War caused a great decrease in volume—though not so much in value which was much increased—of the imports of the lampware, etc., and in order to meet the Indian demand for them, new factories were started and old revived, which produced only cheap and simple kind of lampware and bottles on small scale. The total production of these Indian Glass Works has not been exactly estimated, but it is generally supposed that they were able to meet in these war years nearly half the Indian demand for this kind of glassware. There are at present 14 factories engaged in the production of lampware, of which two or three only produce bottles and carboys also. The chief centres for the former kind are Bombay, Jubbulpore, Allahabad, and Bijhol and Ambala; while bottles are only manufactured at Naini and Lahore, and recently at Calcutta.

During the latter years of the war period, a number of Glass Works were opened in the Bombay Presidency and adjoining districts, local manufacture having been stimulated by the cessation of imports of German, Austrian and Belgian glass.

Causes of failure.—Records of the earlier ventures have shown that the failures in some cases were due in part at least to preventable causes, prominent among which were (1) Lack of enlightened management. (2) Lack of proper commercial basis, as in some cases the proprietors had a number of other more larger concerns to look to. (3) Bad selection of site. An ideal site for a Glass Factory would be determined by the (a) nearness of quartz and fire-clay, (b) nearness of fuel, and (c) by the nearness of market. At least two must be present. In some concerns, two were absent. (4) Specialisation was lacking, some factories in their initial stages trying to manufacture three or four different kinds of glassware simultaneously like lampware, bottles, and bangles, etc. (5) Paucity of sufficient fluid capital for initial expenses for machinery or other improvements or even in some cases for running the concern in the beginning.

But beyond these there are certain real and special causes that contributed to the failure of

some of these and hinder the progress of the rest. Chief among them are (1) The Industry is in its infant stage and hence such failures are but incidental. (2) No expert guidance in this line, there is a lack of men and good literature. (3) Paucity of skilled labour of higher type. The present Indian workmen in this line and blowers are few in number and illiterate. They, therefore, master the situation and are unamenable to management. (4) Heavy cost of good fuel, the works usually being situated where good sand and quartz can be obtained, and consequently, in most cases, at a great distance from the coal-fields. (5) To a certain extent, competition from Japan and other European countries.

Alkali used is almost entirely of English manufacture being Carbonate of Soda 98-99% in a powdered form. This Alkali has almost completely taken place of the various Alkaline Earths formerly employed by the Glass Bangle manufactures as the latter cannot be used in the manufacture of glass which is to compete

with the imported article. These points must be carefully noted for future guidance.

The Industry developed considerably under war conditions; but in peace times, in this transition stage, immediate efforts must be made in the direction of what the Indian Industrial Commission say in their Report (Appendix E), viz.: "The Glass Industry, even in its simplest form is highly technical and can be efficiently carried on only by scientifically trained managers and expert workmen. The present stage has been reached by importing men, only partially equipped with the necessary qualifications, from Europe and Japan, and by sending Indian students abroad to pick up what knowledge they can. The glass industry is a closed trade and its secrets are carefully guarded, so that the latter method has not proved conspicuously successful."

WILD BIRDS' PLUMAGE.

The Bill for prohibiting the importation into England of wild birds' plumage, which was introduced into Parliament in 1913, was the occasion of a fierce controversy on the nature of the plumage traffic. Organised opposition to the Bill, although successful in preventing it from becoming law, failed to convince the public that the plumage trade was not one of great cruelty. The controversy continued with unabated vigour until May 1921, when an agreement was arrived at between the two parties. The most important clause in the agreement stipulates that within four months of the Bill becoming law an Advisory Committee shall be appointed by the Board of Trade. This Committee will consist of an independent chairman, two expert ornithologists, three representatives of the feather trade, and four other independent members. The function of this Committee will be to advise the Board of Trade as to additions to and removals from the existing schedule (ostrich and eider duck) of birds whose plumage may be imported. The passing of the Plumage Bill will thus place England abreast of the United States and of her own daughter Dominions in the suppression of a barbarous industry, as all legitimate methods of breeding birds for their plumage will be safeguarded as definite exceptions under the Plumage Bill.

Plumage birds.—The birds most killed on account of their plumage in India are paddy birds, egrets, kingfishers, bustards, junglefowl, pheasants, parquets, peafowl, hoopoes and rollers. Egrets and rollers (popularly known as Blue Jays) are perhaps the birds which have been most extensively killed in the past, and of these, egrets have attracted the greatest attention. There are three species met with in India: the Large, Smaller and Little Egrets. All three are pure white lim birds which develop during the breeding season a dorsal train of feathers, which elongates and becomes "decomposed" as it is expressed, that is to say, the barbs are separate and distinct from each other,

thus forming the ornamental plume or aigrette for which these birds are much sought after and ruthlessly destroyed. Thirty years ago the exports were valued at over six lakhs in one year, but since 1895 the export trade has steadily diminished. But, though legitimate exports have been stopped, the trade is so lucrative as to lead to many attempts at smuggling. Within a recent period of 12 months the Bombay Preventive Department, for example, seized egret plumes worth Rs. 2,19,047 in India and £44,000 in London. The rupee value represents the sum which the exporters paid to those who took the feathers from the birds, so the loss to the trade was considerable. In addition, penalties varying from Rs. 5,000 to Rs. 10,000 each and amounting altogether to Rs. 59,175 were inflicted on the ten merchants concerned in attempting to export the feathers. A case was reported from Rangoon in 1916 of a man being found in possession of 22 lbs. of egret feathers valued at Rs. 66,000. Although frequently denied, there seems very little reason to doubt, that within the last decade egrets have been successfully bred in captivity by the fisherfolk in the province of Sind. But whether such birds can be bred without cruelty, and if so whether the export of their plumage could be legalised without encouraging barbaries in other areas of the peninsula, is a question which can only be decided as a result of a searching and exhaustive inquiry.

Legislation.—Indian legislation on the subject will be studied with interest by those who have followed the course of legislation on this subject in other countries. Until 1887 no legislation was considered necessary in India. An Act of that year enabled local governments and municipal and cantonment authorities to make rules prohibiting under penalties the sale or possession of wild birds recently killed or taken during their breeding seasons, and the importation into any municipal or cantonment area of the plumage of any wild birds during

those seasons; and local governments were empowered to apply these provisions to animals other than birds.

Afterwards, in 1902, action was taken under the Sea Customs Act to prohibit the exportation of the skins and feathers of birds, except feathers of ostriches and skins and feathers exported *bona fide* as specimens illustrative of natural history. Act VIII of 1912 goes much further than the previous law. It schedules a list of wild birds and animals to which the Act is to apply in the first instance, enables local governments to extend this list, empowers local governments to establish "close times," presumably during the breeding seasons, in the whole of their territories or in specified areas, for wild birds and animals to which the Act applies, and imposes penalties for the capture, sale, and purchase of birds and animals in contravention

of the "close time" regulations, and for the sale, purchase and possession of plumage taken from birds during the close time. There is power to grant exemptions in the interests of scientific research, and there are savings for the capture or killing by any person of a wild animal in defence of himself or of any other person, and for the capture or killing of any wild bird or animal in *bona fide* defence of property.

One defect in the law may be noticed. When an exporter is discovered, the Customs Department can on a magistrate's warrant have his house searched and seize the feathers found there to produce as evidence that he is engaged in the trade. But they have to return the feathers and can only take possession of them if they are discovered presently in course of export.

BREWERIES.

Statistics compiled from official returns show that there were, in 1912, 22 breweries in British India, of which one did not work during the year. Fifteen of these are private property and seven are owned by six joint-stock companies with a nominal capital of Rs. 26,71,000, of which Rs. 22,26,260 was paid up at the end of 1912-13. Eight of the breweries are located at stations in the Himalayas from Murree to Darjeeling. The largest brewery is the one at Murree, the Bangalore, Solon, Rawalpindi, Kasauli, Poona, and Mandalay breweries standing next in the order shown. In the previous year production was 3,651,000 gallons. This figure rose in 1918 to 8,214,000 gallons, but sank after the war, being in 1920 only

3,536,000 gallons.

A substantial quantity of beer produced locally is consumed by the British troops in India. In 1907 the Army Commissariat purchased some 38 per cent. of the total production and the average purchases in the five years 1903-1907 amounted to 2,633,616 gallons yearly. From the 1st January, 1908, the contracts with Indian breweries for the supply of malt liquor to British troops have been discontinued, each British regiment being left free to make its own arrangements to obtain the necessary supply; as a result, the figures of Army consumption are no longer readily available.

GRAIN ELEVATORS.

The question of adopting elevators for the handling of Indian grain has engaged attention for some time and has assumed increased importance in the light of the railway congestion experienced in recent years and more particularly in the grain season. In the last three years great strides have been made by other countries in the adoption or perfecting of the elevator system, and a large mass of contemporary data on the subject has been brought together by the Commercial Intelligence Department. Since the subject is one that cannot receive adequate consideration in India till the facts are before the public, these have been embodied in a pamphlet entitled *Indian Wheat and Grain Elevators*, by the late Mr. F. Noel-Paton, Director General of Commercial Intelligence to the Government of India. The work gives full particulars regarding India's production of wheat, and shows that less than one-eighth of the crop is exported. It describes the conditions under which the grain is held and the risks that it runs. It is pointed

out that the cultivator has no adequate means of preserving his wheat and that he is constrained to sell at harvest time: also that the prices then obtained by him are considerably lower than those usually current in later months. The constant nature of the European demand is explained and an attempt is made to gauge the probability that the enormously increased quantities of wheat to be expected when new irrigation tracts come into bearing would be accepted by Europe at one time and at a good price, or could be economically transported under a system in which a few months of congestion alternated with a longer period of stagnation. Figures are given which suggest that in practice the effect of equipping railways to do this is to intensify the evil and so to engage in a vicious circle. The author explains the structural nature of elevators and their functions as constituted in other countries. Particulars are given as to the laws that govern their operations in such countries

TRADE MARKS.

The **Indian Merchandise Marks Act** (IV of 1889) was passed in 1889, but its operation in the earlier years was restricted, especially in Calcutta, in consequence of the lack of adequate Customs machinery for the examination of goods. In 1894, with the introduction of the present tariff, the Customs staff was strengthened for the examination of goods for assessment to duty, and this increase enabled examination to be made at the same time for the purposes of the Merchandise Marks Act. The Act was intended originally to prevent the fraudulent sale of goods bearing false trade marks or false trade descriptions (as of origin, quality, weight, or quantity). While the Act was before the Legislature a provision was added to require that piece-goods should be stamped with their length in yards. In this respect these goods are an exception, for the Act does not require that other descriptions of goods should be stamped or marked, though it requires that when goods are marked the marks must be a correct description. The number of deten-

tions under the Act during the twenty years ending 1912-13 has been :—

Average of the five years ending		1897-98	1,386
" " " " "	"	1902-03	1,411
" " " " "	"	1907-08	1,198
" " " " "	"	1912-13	1,960

Detention is "but" rarely followed by confiscation, and there have been only 109 such cases during the stated twenty years. Usually, detained goods are released with a fine, and this procedure was followed in 19,282 cases out of the 29,774 detentions ordered in the same period. In 10,364 cases the detained goods were released without the infliction of a fine. In this period of twenty years 42 per cent. of the detentions were on account of the application of false trade marks or false trade descriptions. In 36 per cent. of the cases detention was ordered because the country of origin was either not stated or was falsely stated, and in 21 per cent. because the provisions of the Act for the stamping of piece-goods had been infringed.

HIDES, SKINS AND LEATHER.

India's local manufactures of skins and leather have steadily increased in recent years. Previous to the outbreak of war, the trade in raw hides in this country was good; there was a large demand for hides, and prices ruled high. While in the continental markets stocks were high owing to overtrading in the previous year, the United States had a shortage which was estimated at approximately two million pieces. On the declaration of war, the trade which had up till then been brisk was seriously dislocated. Exports to enemy countries, especially to the great emporium of Indian hides, Hamburg, were stopped, and exporters had to find new markets for the raw material. The raw hide business of India, it is well known, has hitherto been largely, if not quite entirely, in the hands of German firms or firms of German origin. Germany has had the largest share of India's raw hides. In the four months before the outbreak of war she took 39 per cent. of the total exports. In 1912-13 she took 32 per cent. and in 1913-14, 35 per cent. Raw hides were exported to Trieste in considerable quantities whence they were taken to Germany or Austria. In the four months before the outbreak of war 15 per cent. of India's exports passed through Trieste; in 1913-14 the percentage was 21.

Exports.—The exports in raw hides and skins in 1922-23 amounted to 45,700 tons valued at Rs. 571 lakhs as compared with 48,500 tons and Rs. 598 lakhs in the previous year. In raw hides Germany maintained the lead as before though the quantity shipped to that country decreased.

Conditions of the Trade.—The trade in hides and skins and the craft in leather manufacture are in the hands either of Mahomedans or of low caste Hindus and

are on that account participated in by a comparatively small community. The traffic is subject to considerable fluctuations concomitant with the vicissitudes of the seasons. In famine years for instance the exports of untanned hides rise to an abnormal figure. The traffic is also peculiarly affected by the difficulty of obtaining capital and by the religious objection which assigns it to a position of degradation and neglect: it has thus become a monopoly within a restricted community and suffers from the loss of competition and popular interest and favour.

No large industry has changed more rapidly and completely than that of leather. By the **chrome process**, for example, superior leather may be produced from the strongest buffalo hides in seven days, from cowhide in twenty-four hours, and from sheep and goat skins in six to eight hours; and these operations formerly took thirty days or as much as eighteen months. Of these changes the native tanners of India were slow to take advantage, but in spite of general backwardness the leather produced by some of the tanneries, especially those under European management, is in certain respects equal to the best imported articles. But since the outbreak of war progress has been more rapid and considerable quantities of special forms of chrome leather, for which Indian hides are particularly suitable, have found a ready market in London.

Promoting the industry.—The report of the Industrial Commission pointed out that the principal difficulty at present in the hides and leather industry was the lack of organisation and expert skill. Government action to foster the industry was first taken in September 1919, when a Bill was introduced in the Imperial Legislative Council further to amend the Indian

Tariff Act, 1894. The effect of this Bill was officially described as follows: "It is to impose an export duty of 15 per cent. on hides and skins with a rebate of 10 per cent. on hides and skins exported to other parts of the Empire, and there tanned. Its object is to ensure that our hides and skins shall be converted into fully tanned leather or articles of leather so far as possible in India and falling thus in other parts of the Empire, instead of being exported in a raw state for manufacture in foreign countries." Sir George Barnes who was in charge of the Bill and described the tanning industry as one of the most promising Indian industries explained that "the present position is that we have in India at the present time some hundreds of tanneries for the tanning of hides, a large number of which have come into existence in order to satisfy military requirements during the war. We have in fact the foundations of a flourishing tanning industry, but there is reason to fear that it may tend to dwindle and disappear with the diminution of military requirements, if some other support is not given. We want to keep this industry alive, and we believe that in this case protection in the shape of a 15 per cent. export duty is justifiable and ought to be effective. It is clearly just also that the same measure of protection should be extended

to the tanners of skins whose business, as I have already stated, was injured by the necessities of the war. Though Indian tanneries have enormously increased in number during the past three years, they can only deal with a comparatively small proportion of the raw hides and skins which India produces, and it is to the advantage of India and the security of the Empire generally that this large surplus should, so far as possible, be tanned within the Empire, and with this end in view the Bill proposes a 10 per cent. rebate in respect of hides and skins exported to any place within the Empire. I should add that it is proposed to limit by notification the benefit of this rebate to hides and skins actually tanned within the Empire; and Indian hides and skins re-exported from an Empire port for the purpose of being tanned abroad will not be entitled to any rebate."

Indigenous methods.—India possesses a large selection of excellent tanning materials, such as *Acacia* pods and bark, Indian sumach, the Tanner's cassia, Mangroves, and Myrabolans. By these and such like materials and by various methods and contrivances, hides and skins are extensively cured and tanned and the leather worked up in response to an immense, though purely local, demand.

INVENTIONS AND DESIGNS.

A handbook to the **Patent Office** in India, which is published by the Government Press, Calcutta, gives the various Acts, rules, and instructions bearing on the subject together with hints for the preparation of specifications and drawings, hints for searchers and other valuable information that has not hitherto been readily accessible to the general public in so convenient a form. In the preface Mr H. G. Graves, Controller of Patents and Designs, explains the scope of the Patent laws in India and indicates wherein they differ from English law and procedure.

The foundation of patent legislation throughout the world lies in the English "Statute of Monopolies" which was enacted in 1623, the 21st year of King James the First. In part this Act has been repealed, but the extant portion of the more important section 6 is as follows:—"Provided also that any declaration before mentioned shall not extend to any letters patent and grants of privilege for the term of fourteen years or under, hereafter to be made of the sole working or making of any manner of new manufactures within this realm to the true and first inventor and inventors of such manufactures, which others at the time of making of such letters patent and grants shall not use, so as also they be not contrary to the law nor mischievous to the State by raising prices of commodities at home, or hurt of trade, or generally inconvenient; the said fourteen years to be accomplished from the date of the first letters patent or grants of such privilege hereafter to be made, but that the same shall be of such force as they should be if this Act had never been made, and of none other."

The existing Indian patent law is contained in the Indian Patents and Designs Act, 1911, supplemented by the Indian Patents and Designs (Temporary Rules) Act, 1915, and

by the Rules made under those Acts. The Patent Office does not deal with trade marks or with copyright generally in books, pictures, music and other matters which fall under the Indian Copyright Act III of 1914. There is, in fact, no provision of law in British India for the registration of Trade Marks which are protected under the Merchandise Marks Act (IV of 1889) which forms Chapter XVII of the Indian Penal Code.

On the whole, Indian law and procedure closely follow that in the United Kingdom for the protection of inventions and the registration of designs, as they always have done in matters of major interest. One main difference exists, however, as owing to the absence of provision of law for the **registration of trade marks**, India cannot become a party to the International Convention under which certain rights of priority are obtainable in other countries.

The first Indian Act for granting exclusive privileges to inventors was passed in 1856, after an agitation that had been carried on fitfully for some twenty years. Difficulties arising from an uncertainty as to the effect of the Royal Prerogative prevented earlier action, and, owing to some informalities the Act itself was repealed in the following year. In 1859 it was re-enacted with modifications, and in 1872 the Patterns and Designs Protection Act was passed. The protection of Inventions Act of 1883, dealing with exhibitions, followed, and then the Inventions and Designs Act of 1888. All these are now replaced by the present Act of 1911.

The existing Acts extend to the whole of British India, including British Baluchistan and the Santhal Parganas. This of course includes Burma, but it does not embrace the Native States. Of the latter three, viz., (1) Hyderabad (Deccan), (2) Mysore, (3) Gwalior have ordinances of their own, for which particulars must

be obtained from the Government of the States in question as they are not administered by the Indian Patent Office in Calcutta. The object of the Act of 1911 was to provide a simpler, more direct, and more effective procedure in regard both to the grant of patent rights and to their subsequent existence and operation. The changes made in the law need not here be referred to in detail. They gave further protection both to the inventor, by providing that his application should be kept secret until acceptance, and to the public, by increasing the facilities for opposition at an effective period. At the same time a Controller of Patents and Designs was established, with power to dispose of many matters previously referred to the Governor-General in Council, and provision was made for the grant of a sealed "patent" instead of for the mere recognition of an "exclusive privilege." The provisions of the Act follow with the necessary modifications those of the British Inventions and Designs Act of 1907.

OILS AND OIL CAKES.

The production of oil-seeds—rape, mustard, linseed, sesamum, and ground-nut—was estimated in 1920-21 at 2,762,000 tons of which 4,80,000 tons, or 18 per cent. were exported. Exports in 1922-23 amounted to 1,177,000 tons valued at Rs. 27.35 lakhs, showing an increase of 60 per cent. in quantity and 57 per cent. in value compared with the previous year.

A pamphlet on the subject recently published by the Commercial Intelligence Department points out that it is both economically and industrially unsound for India to export her oil seeds instead of manufacturing the oils and oil cakes in India. It allows other countries to reap the manufacturers' profits and at the same time deprives Indian agriculture of the great potential wealth, as cattle-food and manure, contained in the oil cakes. An immense quantity of oil is, as a matter of fact, already manufactured in this country by more or less crude processes. Village oil mills worked by bullocks and presses worked by hand exist in all parts of the country and supply most of the local demand for oil. There has also been a great increase in recent years in the number of oil mills worked by steam or other mechanical power. These crush all the commoner oil seeds and development has been especially marked in the case of mustard oil, castor oil and ground-nut oil. In spite of all this there has been a perceptible diminution in the export of oil from India, particularly of cocoanut oil and linseed oil, and an increase in the export of oil seeds, which is particularly marked in the case of copra and groundnuts. The situation created by the War has naturally led to too much discussion of the possibility of developing on a large scale the existing oil-milling industry in India.

There are three difficulties with which any proposal to develop in India an oil-milling

industry on a great scale is faced. In the first place, there exist high protective tariffs in European countries which encourage the export from India of the raw material rather than the manufactured product. Secondly, there is a better market for the oil cake in Europe than in India and the freight on oil seeds is less than the freight on cake. Thirdly, it is much easier and less expensive to transport oil seeds by sea than it is to transport oil. While this has been the position in the European markets, Indian made oils, other than cocoanut oil, have made enough headway in Eastern markets to suggest the possibility of a development of those markets.

The problem of finding a market for oil cakes is equally important. The value of oil cakes is much better appreciated in Europe than in India. The Indian cultivator is prejudiced against the use of machine-made cake as a cattle food or as manure because he considers that it contains less oil and therefore less nourishment than the village-made cake. He is therefore unwilling to buy it except at a reduced price. His prejudices on this point have no justification in fact since experts are agreed that mill cake is a better food for cattle than village-made cake. Even when the mill cake contains less oil than the village cake, there is still more oil in the cake than cattle can digest. The excess of oil in the village cake, where it exists, is a drawback and not an advantage to the use of the cake as food. A considerable amount of demonstration work has been done by the Agricultural Departments of Government in order to remove the cultivator's prejudices and there is said now to be an increasing demand for most classes of mill cake.

Life Insurance.

There are no publications from which a complete statistical survey of the various branches of insurance work in India can be obtained, but the official "Report on the working of Life Assurance Companies doing business in British India," published by the Government of India, (ninth issue, 1921-22), gives much information in regard to the 75 Life Assurance Companies subject to the provisions of the Indian Life Assurance Companies Act, 1912.

The oldest of the Indian Companies were established in Madras about 90 years ago: Bombay has none older than the Bombay Mutual, the Oriental and the Bombay Widows' Pension Fund which were established about 40 years ago. Life Assurance seems not to have been started in Bengal until much later, and it was not until 1906 that many Companies were established either in that Presidency or elsewhere in India. The year 1919 was marked by the formation of several new companies, more particularly in Bombay.

In his introductory note to the official publication already mentioned, Mr. H. G. W. Meikle, Actuary to the Government of India, dealing with the year 1921-22, says:—

The summaries of the Indian companies show that the life assurance funds now amount to 84 crores and the total income exceeds 2 crores. The sum assured paid in claims by death or maturity exceeds 93 lakhs. The net interest income is nearly 49 lakhs, and exceeds the total expenses of management, including commission, by only 6 lakhs. The outstanding feature of these tables is the large amount of depreciation of assets which the Indian Life Assurance Companies have had to meet; the total exceeds 2 crores, a sum which is equal to the interest income during the past five years. Dividends to shareholders paid out of the life assurance funds amount to 1 per cent. of the sums paid as claims to policy-holders. Before the Life Act came into force almost all of the proprietary Indian companies used to pay dividends to their shareholders, irrespective of whether or not their life assurance funds permitted of such dividends being declared. Now no dividend is paid by any company out of its life funds except out of profits ascertained by an actuarial valuation of its assets and liabilities.

The average amount of sum assured under the policies now being issued by Indian companies is larger than in previous years and now exceeds Rs. 1,900. The average sum assured under policies issued in India by the British companies is more than twice as large. Under most of the policies issued by Indian companies the premiums are payable by monthly instalments, while with the policies of the other companies a much larger number of the premiums are renewable yearly and half-yearly than monthly. Although these factors are partly responsible for the Indian companies having the higher expense ratios, it is unfortunately the case that some of the Indian companies conduct their business on very extravagant lines.

The total assets of the Indian companies is nearly 10 crores. They consist of Indian Government securities to the extent of 80 per cent.

of their total holdings in stock exchange investments.

The total amount of the paid up capital of the Indian companies exceeds 51 lakhs.

The new sums assured under ordinary life assurance policies issued by Indian companies during the year under review was nearly 5½ crores. There has been a steady increase each year since 1916 when the amount was only 1½ crores. Endowment Assurance policies, under which the sum is payable at some stipulated age or at previous death, constitute 83 per cent. of the total business.

The average rate of annual premium payable under the policies issued by Indian companies is nearly 5·4 per cent. of the sum assured. The corresponding rate deduced from the returns to the British Board of Trade is lower, the difference being partly due to the fact that endowment assurances constitute a larger proportion of the policies issued by Indian than by British companies.

Rates of Premium and Surrender value.

—If it becomes necessary for any company to adopt a higher rate of interest for the purpose of the valuation, it is quite likely that the reserve values of many policies will be found to be less than the guaranteed surrender values. In such circumstances the rates of surrender values hitherto guaranteed will be unsuitable for new policies as well as a source of weakness under the existing ones. There is yet another consideration which must now also influence the grant of correct surrender values. The expense ratio shows signs of advancement on account of the general rise in rents, printing, stationery, etc., as well as the advance in salaries consequent on the general rise in prices. The rate at which surrender values are now allowed ought, therefore, to be largely reduced. At the same time it will probably be found that the rates of premium should be revised so as to give effect to the increased cost of procurement and management of business as well as to the higher rate of interest now obtainable. The higher interest would bring about a reduction in the rates of premium unless this benefit be counterbalanced by the increased loading now found to be necessary to meet expenditure. There are many other factors which must be taken into account in fixing on suitable surrender values and in the calculation of premium rates. The questions should not be decided without sound actuarial advice.

Rates of Mortality in India.—Actuaries in this country are frequently asked for a table which will show the expectation of life in India. Sometimes this is asked for without any information being given as to the use to which the table is desired to be put. The rates might, for instance, be those applicable to selected Indian male lives assured, to the wives and daughters of Europeans in Government service, to the wild Hazaras from across the frontier or to the widows of P. & O. sailors. In every civilised country there are many different standard tables of mortality. The rates vary not only with occupation, sex, etc., and are different for annuitants and lives assured, but vary with almost each different class of policy under which

The report by the Actuary to the Government of India for 1922-23 has not been received up to the time of going to press in March, 1924.

the lives are insured. In India the problem is further complicated owing to her heterogeneous population which differ from one another in their traditional occupation, mode of living, social and religious customs, etc., in a more marked manner than in any European country. It is thus not possible to get tables of mortality which can rightly be claimed as applicable to each and all of the almost innumerable different classes of lives in this country, but it will probably be of help in this direction if the main characteristics of some of the more recent important mortality investigations which have come to notice relating to lives of residents in India be contrasted with well-known British standard mortality tables. For instance, it has been found that for members of the Indian Civil Service the expectation of life at ages over 30 is equal to that shown in the OM table for lives between 2 and 3 years younger. In the first few years of service in India the death rate in the I. C. S. is much heavier than the rate experienced after the first period of furlough and almost as heavy as for other members of the service 20 years older. For British officers in the Indian Army the death rate during the greater portion of service was, before the war, much heavier than the OM table. After retirement it was less than the rate in that table for lives of the same age, being about equal to the rate for those 2 years younger. The wives and daughters of members of these two services experience a lighter mortality than the select rates in the British Offices table for female annuitants. In the uncovenanted services of Government the rate of mortality applicable to members is approximately equal to those for lives 4 years older in the HM table. For wives and daughters of those in the uncovenanted services the expectation of life is about equal to the ultimate rate for lives 2 years older in the British Offices table for female annuitants.

It is impossible to differentiate correctly between the rates applicable to each of the many different races in India, but it has been found that the expectation of life of Mahomedan lives assured is less than that of Hindus, which again is less than that of Parsees. The rates of mortality and expectation of life deduced from the Indian census are not claimed to be more than an approximate indication of the actual rates prevailing. This unsatisfactory state of affairs must continue so long as the data relating to births and deaths, as well as to the ages at the date of the census remain as defective as has hitherto been the case.

Actuarial Valuations.—Of the 51 existing Indian companies 39 have submitted the results of actuarial valuation of their assets and liabilities. The majority have undergone valuation more than once, and altogether 72 valuation reports have been submitted by the companies now existing. In the case of 24 companies the result of the latest valuations disclosed a surplus. In 8 of the remaining 15 companies the deficit was covered by the paid up capital, thus proving solvency but precluding the payment of either bonus or dividend. In the remaining 7 cases it became necessary either to call up more capital or alter the policy contracts. Thus only 12 companies out of a total of 51 have not undergone any actuarial valuation. Four of these transact business which is not readily susceptible of actuarial valuation and the remaining 8 are

newly started companies which have not yet reached the stage of having a valuation.

Mutual Companies.—With one exception, all the Indian companies shown as established within the last 20 years are proprietary companies with a share capital; but of the older companies, the great majority are mutual companies. These mutual companies generally have very small funds and it is found that payment of the full deposit prescribed in section 4 of the Life Act sometimes presses unduly on their resources, and as payment of the full deposit also interferes with the formation of new mutual companies, Government will be prepared to consider any application from an Indian mutual company for permission to pay a smaller deposit. One or two of the existing Life Offices are called "Mutual" companies even although they have share capital; such nomenclature should be avoided in the case of companies established hereafter, as there is generally a recognised technical meaning attached to the use of the word "Mutual" in connection with life assurance, in consequence of which its use by a company having a share capital is likely to be misleading.

Since the passing of the Life Act twenty-four Indian life assurance companies have gone into liquidation.

Provident Insurance Societies.—Although several of the Indian Life Assurance companies formerly in existence may deservedly have had very undesirable reputations, it must be remembered that a great deal of discredit has been brought on the better class of such companies owing to the existence of a large number of Provident Societies. The essential difference between a Life Assurance Company and a Provident Insurance Society is that the company is subject to the Life Act and not to the Provident Insurance Societies Act if, under insurances payable at the death or survivorship of any one life, it undertakes either to pay sums which in the aggregate exceed Rs. 500 or to receive premiums which in the aggregate exceed Rs. 25 in any one year where the period for which the premiums are payable is unlimited, or Rs. 250 altogether where such period is limited. If, as may happen in the case of a dividing society, the sum assured payable at death is not fixed but may in certain contingencies exceed Rs. 500, the society is subject to the Life Act. The fact of either the sum assured or the premiums exceeding those limits under any other form of insurance than life assurance does not make the society subject to the Life Act.

Sixteen years ago there were about 1,200 societies in existence in India of the Provident Insurance Society type. Now 29 only remain, 5 of which are proprietary and the rest mutual. Ten of these societies do ordinary life assurance business, one is a widows' fund and another transacts sickness insurance business. These 12 societies could with advantage undergo actuarial valuation. The remaining 17 societies either work on the dividing plan without any minimum guarantee, or on the death call system, and are consequently not susceptible of actuarial valuation. Eight of the Provident Insurance Societies transact other classes of business, mostly marriage insurance, in addition to life business.

Business other than Life Assurance.—The following is a list of Indian companies which transact other classes of insurance business in addition to life insurance :—

NAME OF COMPANY.	CLASS OF BUSINESS OTHER THAN LIFE ASSURANCE.
All India United	Fire and Marine.
New India	Fire, Marine, and Accident.
Himalaya	Fire, Marine, Motor Car, etc.
Bharat	Fidelity Guarantee.
Empire	
National	
National Indian	
Rechabites	Sickness.
Sind Hindu Provident	Marriage.
Christian Mutual	Capital Redemption.
Bengal Insurance and Real Property	Bond Investment.

Indian Life Assurance Companies.—The following list shows the Indian companies in existence in the several provinces of India arranged according to the year when they were founded:—

The names of Mutual Companies have been printed in Capitals.

Year when established.	Madras Presidency.	Bombay Presidency.	Bengal Presidency	Punjab.	United Provinces, Assam, Ajmer-Merwara, Central Provinces and Bangalore.
1829 ..	MADRAS EQUITABLE
1833 ..	MADRAS WIDOWS.
1847	CHRISTIAN MUTUAL.
1849 ..	TINNEVELLY.
1871	BOMBAY MUTUAL.
1874	Oriental.
1876	BOMBAY WIDOWS.
1884 ..	INDIAN CHRISTIAN.
1885	GOAN MUTUAL.
1888 ..	MANGALORE R.C.	B. B. AND C. I. ZORON.
1889	BOMBAY ZORON
1891	GUJARAT ZOROASTRIAN.	HINDU MUTUAL.
1892	Indian Life
1893	PUNJAB MUTUAL.	RECHABITES (U. P.)
1894	SIND HINDU

Year when established	Madras Presidency.	Bombay Presidency.	Bengal Presidency.	Punjab.	United Provinces, Assam, Ajmer-Merwara and Central Provinces and Bangalore.
1896	Empire of India	Bharat
1901	SIMLA MUTUAL.
1906	United India	All India United ..	National Indian; National.	Co-operative.
1907	Hindusthan Co-operative.
1908	Bombay Life ..	India Equitable ..	Hindusthan Death Benefit	General (Ajmer).
1910	Bengal Mercantile	ALL INDIA & BURMA (Bangalore).
1911	Asian Commercial	Arjya (Assam).
1912	Unique
1913	Industrial and Prudential; Western India; East and West.	Light of Asia; Provincial.
1914	British India.
1916	Zenith
1918	India Allied (U.P.)
1919	New India New Era.	Himalaya
1920	Bengal Insurance and Real Property.
1921	Indian-Lion	Nagpore Pioneer (C. P.).

Postal Insurance Fund.—This Fund was instituted by the Government of India for the benefit of the postal employees in 1883 but gradually admission to this Fund has been thrown open to almost all classes of Government servants who are employed on civil duties. On the 31st March 1921 there were 33,258 policies in force assuring a total sum of Rs. 5,16,86,399 including bonus additions. The life assurance fund on that date amounted to Rs. 1,69,19,788. The last actuarial valuation disclosed a surplus which permitted a bonus being paid by way of addition to the sum assured at the rate of 1½ per cent. under whole life policies and 1 per cent. under endowment assurance for each year's premium paid in the valuation period. The limit of assurance permissible under the rules of the fund, which was previously Rs. 4,000, has now been raised to Rs. 10,000.

British, Colonial and Foreign Companies—There are at present 21 British, Colonial and Foreign Life Offices which have a place of business in India. Of these, 17 are constituted in Britain, 2 in Canada, 1 in Australia, 1 in the Straits Settlements, 2 in Shanghai and 1 in the United States of America. Nearly all are partially exempt from the operation of the Indian Life Assurance Companies Act of 1912

on the ground that, when it came into force, they were carrying on business in the United Kingdom in conformity with the provisions of the British Assurance Companies Act of 1909. The principal effects of the exemptions allowed to these British, Colonial and Foreign companies are that they are freed from the necessity either of making a deposit with the Controller of Currency or of making separate statements respecting their Indian business. Those granted exemptions are allowed to submit their accounts in the form prescribed by the British Assurance Companies Act of 1909. The Indian Life Act has to a great extent been enacted on the lines of the British Act. All of these 21 companies grant annuities and in addition carry on the other classes of business shown in the following statement. This statement also indicates the proportion of each company's business which is transacted in the United Kingdom. Unfortunately no similar information can be given regarding their Indian business as none of the companies, except the Great Eastern, the China and the Shanghai, are required to give any particulars of this nature. These three companies transact about ten per cent. of their business in India.

The broad characteristics of the trade of India are familiar to readers of the Indian Year Book. India is chiefly an agricultural country, for 72 per cent. of its people are directly dependent upon agriculture for their means of livelihood. Consequently, the prosperity of the land is largely determined by the character of the south-west monsoon rains. An area which every year grows larger is protected by irrigation and the extension of these works, together with the increased resisting power of the people and the growth of the manufacturing industry, is expected to make the population immune to the shock of such famines as those of 1896-97, 1899-1900 and 1918-19. But many of the irrigation works, such as tanks and wells, depend on the rains for their replenishment. Consequently, the rains mainly determine the export trade and the consequent purchasing power of the people. Another feature that arises from these conditions is that the imports are chiefly manufactured goods and the exports produce.

The main conclusions to be drawn from the trade statistics of the last official year are indicated in the annual Review of the Trade of India by Mr. C. G. Freke, Director-General of Commercial Intelligence, from which the following details are mainly drawn.

Indian trade in 1922-23 had many of the characteristics of the previous year, but the general position at the end of the year was distinctly healthier than at its beginning. The period of readjustment after the postwar boom began about the beginning of 1921, when the period of liquidation set in. And the worst of this liquidation was borne by 1921-22. During 1922-23 stagnation was the key note of the import trade, but on the export side conditions in India favoured a strong revival to which, however, her overseas customers were only in a position to provide a moderate response. The rains were ample and well distributed and good harvests were reaped in practically all parts of the country. As a result of two good years the exportable surpluses of grains and seeds were considerable and prices of the staple food-grains fell appreciably. The unsold stocks of imported goods carried over from the previous year were gradually cleared and the general increase in purchasing power was evidenced by the large importations of gold and silver which were a normal feature of Indian trade before the war but have been absent during the two previous years. It was pointed out, however, in last year's review that the prospects of real improvement in Indian trade are bound up with the improvement of purchasing power in Europe—in 1913-14 fifty eight per cent. of her exports went to European countries. During the year 1922 there were distinct signs of improvement. Most European countries showed notable improvement in practically all branches of indus-

trial and commercial activity and there were by December 1922 signs of steady improvement visible nearly everywhere. In the first quarter of 1923, the occupation of the Ruhr introduced a factor of uncertainty and difficulty, which, although it gave a temporary stimulus to international trade in certain commodities, particularly coal and iron and steel, very soon led to marked stagnation and arrested the general improvement in trade which had been noticeable up till then. This change was felt in India in the increased prices of certain imports, particularly iron and steel and dyes, and in the slackening of the demand for certain of her exports, particularly hides. India's three best individual customers are the United Kingdom, Japan, and the United States of America and consequently from an exchange point of view, she is particularly interested in the movements of the levels of wholesale prices in those countries. Those levels remained remarkably constant in both the United Kingdom and India, and in Japan also the level was well maintained except for a fall in the period November to January. The level in the United States rose from 11.7 (Bradstreet's index number) in April 1922 to 13.9 in March 1923, practically the whole of the rise taking place after the end of August, i.e., after the considerable increases in import duties, enacted under the Fordney Tariff, were brought into effect. Apart from the variations in Continental exchanges, the sterling exchange rate was comparatively steady. After rising slowly from 1s. 3½d. in April to 1s. 4½d. in December, it spurred to 1s. 5½d. in January but this rise was short-lived and it fell as rapidly again to the neighbourhood of 1s. 4½d., where it remained until the close of the year. The economic state of some of the principle European countries became steadily worse and this was naturally reflected in the foreign exchanges. The German mark reached unprecedentedly low levels and has since almost passed out of commerce. The Austrian rate rose to over 400,000 by August but was thereafter steady. The currencies of Greece, Turkey, Poland, Roumania and Portugal also depreciated considerably but that of Czecho Slovakia made a good recovery.

The decrease in the recorded values of imports was primarily due to lower prices, while the improvement in the value of exports was a genuine increase, as the general level of export prices was fairly steady. The following figures have been compiled to show the values of imports and exports, of merchandise only, on the basis of declared values in 1913-14. These statistics are necessarily approximate, but they are sufficiently accurate to afford a reliable measure of the course of trade, and they illustrate the extent to which Indian trade is returning to pre-war dimensions, more on the export side than on the import side. It has also to be borne in mind that in 1913-14 trade was distinctly better than the pre-war normal.

IMPORTS.

Imports of Merchandise.

Cotton Manufactures.—During 1921-22 the combination of excessive stocks on hand and the reduced purchasing power of consumers rendered importations small. Most of the old stocks were cleared and the improvement in purchasing power combined with the collapse of the movement against the use of imported goods led to a marked increase in importations. Future prospects did not become sufficiently clear to lead wholesale distributors to place large orders and the high price of the raw material lessened the expansion which might otherwise have been anticipated from the improvement of purchasing power due to good harvests—the average price of Midding American in Liverpool was 12½ pence in 1922 as compared with 10 pence in 1921. Trade throughout the year was fitful and uncertain but there were clear signs of its reaching a steady basis of normal trading.

The total imports of cotton manufactures increased in value to Rs. 70 crores in 1922-23 as compared with Rs. 57 crores in 1921-22 and Rs. 66 crores in 1913-14. These values represent respectively 30, 21, and 36 per cent. of India's total imports during each of the years specified. The increase in the imports of cotton twist and yarn was maintained and the quantity rose from 57 to 59 million lbs, but the value fell by Rs. 2,25 lakhs to Rs. 9,26 lakhs on account of lower prices. The increase in quantity was only 4 per cent. over 1921-22, while the decrease in value was 20 per cent. The average value per lb. decreased from Rs. 2-0-3 in 1921-22 to Rs. 1-9-0 in 1922-23. There was a noticeable increase in the imports of counts Nos. 1 to 20, which nearly doubled from 7 million lbs. in 1921-22 to 13 million lbs. in 1922-23, of which 12 million lbs. were received from Japan as against 5 million lbs. in the preceding year. The imports of counts 31 and over decreased from 36 to 33 million lbs., of which the United Kingdom supplied 21 millions and Japan 10 millions as against 27 and 7 millions respectively in 1921-22. The United Kingdom maintained her position in the higher counts but Japan practically dominated the market in the lower counts, in which she is a strong competitor with Indian mill-made yarns. Of the total imports, 52 per cent. came from the United Kingdom and 45 per cent. from Japan. The corresponding percentages were for 1921-22, 70 and 26, for 1920-21, 49 and 43 and for 1913-14, 86 and 2. The sum total of imports and production was 765 million lbs. as against 751 million lbs. in 1921-22 and 727 million lbs. in 1913-14. The total quantity of cotton piece-goods imported increased by 500 million yards or 46 per cent. to 1,060 million yards, the largest increase being in grey goods. Grey goods increased by nearly 300 million yards or 46 per cent., while white and coloured varieties each showed an increase of about 100 million yards or 31 and 76 per cent. respectively. In spite of these improvements the quantities still fell short of the pre-war level by 39,49, and 71 per cent. respectively.

Sugar.—Sugar ranked third in India's import trade in 1921-22. It fell back to fourth place in 1922-23 with a total value of Rs. 15½ crores, the first three being cotton manufactures (Rs. 70 crores), machinery and mill work (Rs. 24 crores) and iron and steel (Rs. 18 crores). The excessive stocks at the end of 1921-22 together with heavy

losses by merchants in that year as a result of the continuous fall in prices of Java sugar depressed the trade. The total quantity of imported sugar, refined and unrefined, decreased by 38 per cent. to 442,400 tons. Over 84 per cent. of the imports came from Java and 7 per cent. from Mauritius. Imports from Java (including imports from the Straits Settlements which are forwarding agents for Java sugar) fell to 373,700 tons from 628,400 tons in 1921-22. In 1922 Java exported 1,379,420 tons of sugar, of which British India and the Straits took about 28 per cent. Bengal took 151,600 tons or 41 per cent. of the Java imports, Bombay 104,500 tons or 28 per cent., Karachi 86,200 tons or 23 per cent., Burma 22,700 tons or 6 per cent. and Madras 8,700 tons or 2 per cent. The most marked decrease in the import of Java sugar was in Bengal which took less than half the quantity imported in 1921-22, while Bombay increased her takings. The imports of Mauritius sugar decreased from 61,600 tons in 1921-22 to 31,400 tons, of which 72 per cent. was taken by Bombay and 27 per cent. by Bengal. Mauritius sugar, being sugar manufactured within the British Empire, pays a lower rate of duty on entry into the United Kingdom than outside sugar and hence the tendency in future will be for this sugar to be attracted more and more to the United Kingdom. The principal sources of India's foreign sugar supplies are shown in the following table:—

Higher prices ruling in the preceding years gave an impetus to the sugar industry of India. The area under cultivation increased from 2,395,000 acres in 1921-22 to 2,721,000 acres in 1922-23 and the production of sugar from 2,599,000 tons to 2,969,000 tons. In some districts, notably in North Bihar, several centrals have been established for the manufacture of sugar direct from cane and for refining raw sugar, and Indian farmers in the white sugar tract have realised that it is more to their advantage to sell their canes to these centrals for ready money than to crush them themselves. In view of the reduced imports of foreign sugar it is of interest to note that in 1922-23 the net production of gur in India was 342,800 tons greater than in 1921-22. Exports of Indian sugar fell from 6,200 tons in 1921-22 valued at Rs. 25 lakhs to 3,500 tons, valued at Rs. 10½ lakhs, and of this quantity 2,479 tons, valued at nearly Rs. 6 lakhs consisted of molasses.

Metals and Manufactures thereof.—The total value in 1922-23 amounted to Rs. 25 crores. Iron and steel represented Rs. 18 crores of this total and occupied the third place in order of importance among imports, ousting sugar which occupied that place in the preceding year. If there were included under the heading of metals and manufactures also machinery and mill-work (Rs. 23½ crores), railway plant and rolling stock (Rs. 11 crores), cutlery, hardware and instruments (excluding electrical instruments) (Rs. 6½ crores) and vehicles other than carriages and carts (Rs. 3 crores), the total value would reach Rs. 69 crores and so would be short of the value of textiles by Rs. 7 crores only.

Iron and Steel.—The imports of manufactured iron and steel (excluding pig and old iron) increased from 580,000 tons in 1921-22

Quinquennial averages of Sea-borne Trade of India (Private and Government.)

Note.—Imports and Exports include both private and Government transaction.

to 732,000 tons in 1922-23, the highest figure recorded since 1913-14, but lower prices accounted for a drop of Rs. 2.56 lakhs in value to Rs. 18.23 lakhs as compared with the preceding year. The chief increases were in sheets and plates, nails, rivets and washers, bolts and nuts, hoops and strips, steel bars and channel, wire other than fencing wire, wire nails and wire rope, all of which increased both in quantity and to a lesser proportion in value. Iron bars and channels, beams, pillars and girders, cast pipes and fittings, and steel angles and springs showed increases in quantity but decreases in value. The only important items in which decreases were noticeable were wrought tubes, pipes and fittings and cast steel which decreased respectively by 10,000 tons and 300 tons in quantity and by Rs. 1.56 lakhs and Rs. 3 lakhs in value. The increase under steel bars was chiefly contributed by Belgium and Germany which quoted lower prices than the United Kingdom. There were larger arrivals of galvanised sheets and plates from the United Kingdom and the United States of America. The United Kingdom, Norway and Sweden mostly contributed to an increase under nails, rivets and washers. Cast pipes and fittings were received mostly from the United Kingdom. There were larger supplies of tubes, pipes and fittings wrought from the United Kingdom and Germany, with lower prices, while the United States of America lost ground in this line. Wire nails were chiefly supplied by Germany, Belgium and the United States of America, while wire rope was obtained mostly from the United Kingdom.

Machinery and Millwork.—As in the previous year the head "Machinery and millwork" ranked next in importance to that of cotton manufactures in India's import trade during 1922-23. The total value of the imports of machinery of all kinds including belting for machinery decreased to Rs. 24 crores from Rs. 35 crores in 1921-22, a decrease largely due to lower manufacturing costs. Almost all descriptions showed a decrease in value with the exception of cotton textile machinery and sewing and knitting machines. The heaviest decreases were shown by jute mill machinery (—Rs. 2.53 lakhs or 59 per cent.) and boilers (—Rs. 1.31 lakhs or 51 per cent.). The value of cotton machinery imported increased from Rs. 7.64 lakhs to Rs. 8.49 lakhs due to a large increase in cotton spinning machinery, from Rs. 4.58 lakhs to Rs. 6.52 lakhs. Cotton weaving, bleaching and other sorts of cotton machinery, however, decreased by Rs. 1.09 lakhs to Rs. 1.97 lakhs. Jute machinery decreased by 59 per cent. in value to Rs. 1.79 lakhs, and total textile machinery fell from Rs. 12.82 to Rs. 10.68 lakhs, of which the United Kingdom supplied 98 per cent.

Railway Plant and Rolling Stock.—Railway expenditure in India was greatly restricted during the war and confined only to works that were absolutely necessary. The value of the imports of railway plant and rolling stock, on private and Government accounts combined, averaged Rs. 4.73 lakhs during the war quinquennium (1914-15 to 1918-19) as compared with the pre-war average of Rs. 8.91 lakhs. After the termination of the war the value of railway plant and rolling stock imported both on private and Government account steadily

increased from Rs. 9.05 lakhs in 1919-20 to Rs. 16.60 lakhs in 1920-21 and to Rs. 21.86 lakhs in the following year. In 1922-23 the value of total imports fell, partly owing to marked price-reductions, and amounted to Rs. 13.76 lakhs, of which Rs. 2.70 lakhs were on Government account as compared with Rs. 2.95 lakhs in 1921-22.

The imports from the United Kingdom and the United States of America during the last four years were in the following proportions:—

	1919-20.	1920-21.	1921-22.	1922-23.
United Kingdom.	69	96	97	94
United States of America.	30	1	1	1

Motor Vehicles.—The year 1922-23 opened with considerable stocks of motor cars on hand, but there are indications that the bulk of these had been absorbed by the end of the year. Importations rose from 2,895 in 1921-22 to 4,323 in 1922-23, an increase of 50 per cent. The increase of the import duty from 20 to 30 per cent. in March 1922 was speedily neutralised by price-reductions and prices were on the downward trend throughout 1922-23. The value of the imports decreased by 20 per cent. to Rs. 1.38 lakhs as the result of large importations of the cheaper American and Canadian cars. Of the total imports 1,846 cars came from Canada, 1,386 from the United States, 449 from the United Kingdom, 131 from Italy, 119 from Belgium, 61 from France, and 55 from Germany.

In connection with the dominance of American and Canadian cars in the Indian market, it is worthy of note that of the total number of cars registered in the world, approximately 14½ million at the beginning of 1923, it is estimated that 88 per cent. consist of cars registered in the United States and Canada, and the production of motor vehicles in the United States during 1922 was 2,400,000. This very large home demand gives North American manufacturers a distinct advantage in this market over their European competitors. Travelling conditions in the United States are also more closely similar to long distance touring and estate work in India than is the travelling on good roads for which European cars are mostly designed. The price-factor is, however, the chief consideration and it is their big advantage in this respect that enables American and Canadian cars to dominate the Indian market.

Hardware.—This omnibus head includes a number of items, such as enamelled ironware, implements and tools (other than machine tools) buckets of tinned or galvanised iron, metal and glass lamps, safes, stoves, builders' hardware, domestic hardware, etc. The total value of the imports showed a small decrease from Rs. 5.92 lakhs in 1921-22 to Rs. 5.15 lakhs in 1922-23. The noticeable feature of the trade was a large increase at the expense of British and American products, in the imports from Germany which were valued at Rs. 1.12½ lakhs or 22 per cent. of the total, as compared with Rs. 61 lakhs or 10 per cent. in 1921-22 and Rs. 29 lakhs or 3 per cent. in 1920-21.

EXPORTS.

Mineral Oils.—The year 1922 was not so favourable for the oil industry as its immediate predecessors. Prices fell considerably owing to production having outstripped consumption. There was an increased output of crude oil in the United States of America and Mexico in the earlier months of the year, but in the closing months Mexican output fell off considerably which tended to firm up prices in other producing countries. The smaller Mexican output was, however, more than counterbalanced by the increase in other directions. So that the world output was not much affected. Fifty million gallons of kerosene (bulk oil 45,670,000 and case oil 4,642,000) were imported in 1922-23 as compared with 46½ million gallons (bulk 41½ millions and case 5 millions) in 1921-22. The quantity, however, was 16½ million gallons less than the average annual imports during the five pre-war years ending 1913-14. The average declared value per gallon fell from 11 annas 11 pices to 10 annas 9 pices and imports showed a decrease in value from Rs. 3,46 lakhs in 1921-22 to Rs. 3,38 lakhs in 1922-23. Thirty-nine million gallons or 78 per cent. came from the United States as compared with 40 million gallons or 86 per cent. in 1921-22. Some 200,000 8 million gallons or 15 per cent., and 2 million gallons of Persian kerosene oil were imported from Egypt. Coastwise imports from Burma to India proper amounted to 119 million gallons as compared with 116 million gallons in 1921-22, 100 million gallons in 1920-21, and a pre-war average of 93 million gallons. There was again an increase in the imports of fuel oils from 58 to 62½ million gallons, due to the increased demand for liquid fuel by railways, ships and industrial concerns. Persia supplied 51 million gallons or 81 per cent. of the total imports.

Exports of Merchandise.

Cotton.—The American crop was estimated at 12,202 thousand bales (400 lbs.) as compared with 9,942 thousand bales in 1921 and 16,800 thousand bales in 1920, and the Egyptian crop at 1,213 thousand bales as compared with 817 thousand bales in 1921 and 1,491 thousand bales in 1920. The Indian crop also increased, by 16 per cent., from 4,485 thousand bales (400 lbs.) in 1921-22 to 5,181 thousand bales in 1922-23. The production in 1920-21 was 3,600 thousand bales.

Exports from India increased to 3,362 thousand bales as compared with 2,959 thousand bales in 1921-22, 2,074 thousand bales in 1920-21, and a pre-war average of 2,407 thousand bales. Japan took 1,821 thousand bales or 48 per cent. of the total quantity exported as compared with 1,760 thousand bales or 59 per cent. in 1921-22 and a pre-war average of 1,012 thousand bales, which amounted to nearly two-thirds of her total importation of cotton. Although Japan has been steadily increasing her consumption of cotton during recent years she has been making great efforts to increase production both in Japan and in Korea and her importations of American cotton are much greater than formerly. This latter increase is due to finer spinning as is shown by her returns of counts spun. The reduction of about 20 per cent. in spindleage resulting from the disaster in the autumn of 1923 may temporarily reduce her cotton con-

sumption, but that will be quite temporary and it may well be much less than was at first anticipated, as most of her spinning mills were not working full-time and those which remain effective can absorb a fair quantity of the anticipated decrease merely by an extension of working hours. It is anticipated that a certain number of the mills destroyed may be re-established in the neighbourhood of Shanghai in order to benefit by the Chinese tariff. So that the future may show a still larger increase in Chinese cotton imports accompanied possibly by a decrease, or at any rate a cessation of the increases noticed in recent years, of cotton imports into Japan.

Cotton Piece-goods.—There was a slight decrease in production of 6 million yards as compared with 1921-22, but an increase of 9 per cent. over 1920-21. The decline which was observed under coloured goods during 1921-22 was more than made up in 1922-23; dhutis and shirtings and longcloth under grey and bleached piece-goods, which showed great increases in 1921-22, experienced slight declines in the year under review. Exports of grey and bleached goods increased by 7 million yards to 32·2 million yards, while coloured goods fell by 11 million yards to 124·8 million yards. Exports of total piece-goods to Turkey, Mesopotamia, and Persia decreased to 61 million yards from 66 million yards and those to Singapore, Colombo and Aden were 45 million yards as compared with 47 million yards. Exports to East African ports increased to 25 million yards, from 22 million yards. Bombay, as usual, had the bulk of the trade with 77 per cent. of the total quantity exported, while Madras had 22 per cent.

The value of goods woven in Indian mills during the year, as far as reported, was Rs. 584 crores against Rs. 60½ crores in 1921-22, while the value of cotton goods imported was Rs. 61 crores as compared with Rs. 45½ crores in the previous year. It should be noted that there is no record of piece-goods manufactured on hand looms.

Jute and Jute Manufactures.—The figures of 1922-23 showed a marked improvement upon those of 1921-22. The total weight of raw and manufactured jute shipped in 1922-23 increased by 13 per cent. from 1,108 to 1,250 thousand tons, but, owing to improved prices, the value of these exports increased by 43 per cent. from Rs. 44 to Rs. 63 crores. The following figures show the exports of raw and manufactured jute separately in 1913-14, 1921-22 and 1922-23:—

	1913-14.	1921-22.	1922-23
Jute (in thousand tons)	768	468	578
Bags (in millions) .	369	387	344
Cloth (in million yards)	1,061	1,121	1,254

Foodgrains and Flour.—The exports of grain, pulse and flour during 1922-23 amounted to 2,598,200 tons, valued at Rs. 42·48 lakhs, showing an increase of 57 per cent. in quantity

Foreign Sea-borne Trade of British India.

and 42 per cent. in value over 1921-22, due to the removal of the embargo on the export of rice. The important crops are rice and wheat, 92 per cent. of the total quantity of foodgrains and flour exported consisting of rice (2,125,300 tons), wheat (220,200 tons), and wheat flour (50,100 tons).

Oilseeds.—The fourth place among exports is taken by oilseeds, the first three being cotton and jute, raw and manufactured, and foodgrains. Indian supplies were, generally speaking, plentiful as the result of good rains, and, although the industrial activities of Europe have by no means completely recovered from the war and post-war paralysis, the total off-take of Indian oilseeds improved considerably.

The total exports amounted to 1,177,000 tons, valued at Rs. 27.35 lakhs, showing an increase of 60 per cent. in quantity and 57 per cent. in value, as compared with 1921-22. The bulk of the oilseed crops are harvested towards the end of one financial year and are marketed in the following year. In 1920-21 Indian oilseeds fared badly in foreign markets, and in 1921-22, there was no marked recovery, except in groundnuts. In 1922-23, all the principal descriptions of seeds were exported in larger quantities.

Direction of Trade.

India's exports normally exceed her imports in the case of all the countries with which she deals in large quantities, excepting the United Kingdom where the reverse has always been the case.

The percentage share of the United Kingdom under imports rose from 58.6 per cent. in 1921-22 to 60.2 per cent. in 1922-23 and in exports from 20.1 to 22.4 per cent. as compared with her pre-war shares of 64.1 and 23.4 per cent. respectively. The share of His Majesty's Dominions and other British Possessions in imports dropped from 10 to 7 per cent, due mainly to the cessation of the large wheat imports from Australia and decreased imports of Mauritius sugar, Natal coal, and Kenya cotton. The share in export also fell from 21 to over 18 per cent. The whole British Empire had 52 per cent. of the total trade (67.2 per cent. of the imports and 40.7 per cent. of the exports) as against 54 per cent. (imports 66.6 per cent. and exports 41 per cent.) in 1921-22. The share of the United States in the import trade, although still considerably greater than her pre-war share, has shown a steady decline since the close of the war, and it dropped from 8.1 per cent. in 1921-22 to 5.7 per cent. in 1922-23, but her share in the export trade, which had also been on the downward grade, improved from 10 per cent. in 1921-22 to 11.1 per cent. in 1922-23. Japan made a slight recovery in imports from 5.1 per cent to 6.2 per cent, but her share in the export trade dropped from 15.7 per cent. to 13 per cent.

Germany's share in imports improved from 2.7 per cent. in 1921-22 to 5.1 per cent. and in exports from 6.7 per cent. to 7.2 per cent., the pre-war shares being 6.9 and 10.6 per cent. respectively. The Belgian share of imports (2.7 per cent.) exceeded her share (2.1 per cent.) in 1921-22, owing mainly to larger importations of iron and steel, and her share in exports also increased to 3.6 per cent. from 3.3 per cent. in 1921-22. Smaller imports of sugar from Java and Mauritius accounted for a considerable decrease in their shares in the import trade; and with the practical stoppage of wheat imports from Australia, her share in the total trade (imports and exports) decreased and stood almost at the pre-war level.

Turning now to the exports the share of the United Kingdom under tea (87 per cent.), although slightly less than in the preceding year, was distinctly higher than the pre-war share (72 per cent.) due partly to the fact that Russia is still out of the market and partly to increased consumption. The share of the Persian Gulf littoral showed an improvement, while Australia is on the downward grade owing to the competition of Java tea. Under raw jute, the share of Germany fell from 30 per cent. in 1921-22 to 25 per cent. in 1922-23 and of France from 12 to 10 per cent., while that of the United Kingdom and the United States rose, respectively, from 20 and 13 per cent. to 26 and 15 per cent. in 1922-23. Apart from the increase in the share of the United States from 40 per cent. in 1921-22 to 46 per cent. in 1922-23 and the decrease in the share of Japan from 43 to 1 per cent., no other changes under the head of jute manufactures are striking. Under raw cotton the share of Japan fell from 60 per cent. in 1921-22 to 49 per cent. in 1922-23, while China's share (15 per cent.) remained almost at the level of the preceding year—her share in the pre-war year was, however, less than 2 per cent. The shares of Germany and Italy, although less than their pre-war shares, and of the United Kingdom increased as compared with 1921-22. Of oilseeds the United Kingdom, Germany, the Netherlands and Italy took greater shares of the considerably increased total export, while the shares of Belgium and France decreased. Under foodgrains the shares of the principal importing countries showed decreases with the exception of the United Kingdom, whose share was 12 per cent. in 1922-23 as compared with 10 per cent. in 1921-22 and 27 per cent. in 1913-14. In hides and skins, the United States lost her ground considerably, and both Great Britain and to a less extent Germany made progress at her expense. The share of the United Kingdom rose from 33 to 42 per cent. as compared with 26 per cent. before the war and that of the United States, which rose from 24 per cent. in 1913-14 to 34 per cent. in 1921-22, fell to 26 per cent. in 1922-23.

The following table shows the imports from and exports to European and other foreign countries :—

3. Imports, Exports and Balance of Trade of India (Private Merchandise only.)

INDIAN FISCAL COMMISSION.

The Government of India in October, 1921, appointed a Commission of officials and non-officials with the following terms of reference :—
 " To examine with reference to all the interests concerned the tariff policy of the Government of India, including the question of the desirability of adopting the principle of Imperial preference, and to make recommendations."

The report of the Commission was issued in 1922. The main report was signed by all the members of the Commission, namely, Sir Ibrahim Rahimtoola (President), Mr. T. V. Seshagiri Ayyar, Mr. G. D. Birla, Mr. J. C. Coyajee, Mr. M. B. Dadabhoi, Mr. Jamnadas Dwarkadas, Mr. E. Holberton, Mr. R. A. Mant, Mr. Narottam Morarjee, Mr. C. W. Rhodes and Sir Montagu Webb, but Sir Ibrahim Rahimtoola, Mr. T. V. Seshagiri Ayyar, Mr. G. D. Birla, Mr. Jamnadas Dwarkadas and Narottam Morarjee appended a minute of dissent.

The recommendations of the Commission as a whole may be summarised in the following paragraphs :

Preliminary Conclusions.—1. (a) That the Government of India adopt a policy of Protection to be applied with discrimination along the lines indicated in this Report. (b) That discrimination be exercised in the selection of industries for protection, and in the degree of protection afforded, so as to make the inevitable burden on the community as light as is consistent with the due development of industries. (c) That the Tariff Board in dealing with claims for protection satisfy itself (i) that the industry possesses natural advantages; (ii) that without the help of protection it is not likely to develop at all or not so rapidly as is desirable; and (iii) that it will eventually be able to face world competition without protection. (d) That raw materials and machinery be ordinarily admitted free of duty, and that semi-manufactured goods used in Indian Industries be taxed as lightly as possible. (e) That Industries essential for purposes of National Defence, and for the development of which conditions in India are not unfavourable, be adequately protected if necessary. (f) That no export duties be ordinarily imposed except for purely revenue purposes and then only at very low rates; but that when it is considered necessary to restrict the export of food grains, the restriction be effected by temporary export duties and not by prohibition.

2. That a permanent Tariff Board be created whose duties will be *inter alia* to investigate the claims of particular industries to protection, to watch the operation of the Tariff and generally to advise Government and the Legislature in carrying out the policy indicated above.

3. (a) That no general system of Imperial Preference be introduced; but (b) that the question of adopting a policy of preferential duties on a limited number of commodities be referred to the Indian Legislature after preliminary examination of the several cases by the Tariff Board. (c) That, if the above policy be adopted, its application be governed by the following principles: (i) That no preference be granted on any article without the approval of the Legislature. (ii) That no preference given in

any way diminish the protection required by Indian Industries. (iii) That preference do not involve on balance any appreciable economic loss to India. (d) That any preferences which it may be found possible to give to the United Kingdom be granted as a free gift. (e) That in the case of other parts of the Empire preference be granted only by agreements mutually advantageous.

4. That the existing Cotton Excise Duty in view of its past history and associations be unreservedly condemned, and that Government and the Legislature start again with a "clean slate" regulating their excise policy solely in the interests of India.

Subsidiary Recommendations.—5. That the proviso to Section 20 of the Sea Customs Act be repealed and that Customs Duty be ordinarily levied on goods belonging to Government.

6. That difficulties in the shape of shipping rebates or unfair advantages like dumping, depreciated exchanges, bounty-fed imports from abroad, be investigated and where possible removed.

7. That industrial development be promoted by giving a more industrial bias to primary education and providing opportunities for training apprentices, and organisations for increasing the mobility of labour.

8. That no obstacles be raised to the free inflow of foreign capital, but that Government monopolies or concessions be granted only to companies incorporated and registered in India with rupee capital, such companies to have a reasonable proportion of Indian Directors and to afford facilities for training Indian apprentices.

9. That the Tariff be not ordinarily employed for retaliation or as a means of aggression.

10. That the Tariff be elaborated with a view to remove ambiguities and that the system of specific duties and tariff valuations be cautiously extended.

Dissent.—The writers of the Minute of Dissent set out the reasons which induced them to do so in the following words :

- (a) The main recommendation has been hedged in by conditions and provisos which are calculated to impair its utility.
- (b) In places, the language employed is half-hearted and apologetic.
- (c) We are unable to agree with the views of our colleagues on Excise, Foreign Capital, Imperial Preference and the constitution of the Tariff Board.

2. Our first objection is to the statement in the Report that "we recommend a policy of protection to be applied with discrimination along the lines of the Report." To formulate a policy in these words is open to objection because (i) In the first place, it mixes up policy with procedure. (ii) In the second place, by emphasising the method of carrying out the policy, the vital issue of the problem is obscured. (iii) In the third place, it ignores the fact that

every country applies Protection with discrimination suited to its own conditions. (iv) Fourthly in our opinion the outlook of our colleagues is different from ours. We do not therefore feel justified in subscribing to the view that Protection should be applied with discrimination "along the lines of the Report."

In our opinion, there should be an unqualified pronouncement that the fiscal policy best suited for India is Protection.

Tariff Board Appointed.—In July 1923 the Government of India announced the appointment of a Tariff Board for a period not exceeding one year in the first instance to carry out the investigations resulting from the acceptance of their resolution and to make recommendations thereon.

The Board was constituted as follows:—President.—Mr. G. Rainy, C.S.I., C.I.E., I.C.S. Members.—The Hon. Mr. V. G. Kale, Professor of Economics, Ferguson College, Poona, and Mr. P. P. Ginwala, M.L.A., Bar-

at-Law, Rai Bahadur S. N. Banerji, Assistant Secretary, Commerce Department.

The Government of India will select the industries to be taken up for investigation and determine the order of the inquiry, and it will be the duty of the Tariff Board after such examination, as it thinks necessary to make recommendations regarding the protection (if any) to be extended to those industries and the nature and extent of the protection.

As recommended by the Fiscal Commission in paragraph 107 of its report the Board examined first the question of extending protection to the manufacture of steel in India. In considering this question the Board was directed to take into account the effect of any recommendations it may make on industries dependent on the use of steel, and in particular it will consider how its recommendations will affect the industries referred to in paragraph 9 of the report of the Railway Industries Committee and whether those industries should be accorded protection.

THE SUGAR

The Report of the Indian Sugar Committee appointed by the Government of India in October 1919 to investigate the possibility of organizing and developing the sugar industry in India was published in August, 1921. The Report of this Committee was fully summarised in *The Indian Year Book* for 1922, pages 281 *et seq.*, to which reference should be made.

In the introductory chapter to the Report, the considerations which led to the appointment of the Committee are emphasized. These were the very low production of sugar to the acre in India as compared with the other great cane growing countries of the world and the dependence of the country on foreign supplies to supplement its own output. It is pointed out that the average production of sugar to the acre in India, is only 1·07 tons against 1·96 tons in Cuba, 4·12 tons in Java and 4·61 tons in Hawaii. The comparison is even less favourable to India, if it is remembered that 99 per cent. of the sugar produced in India is in the form of "gur" which is in reality a sweetmeat and yields not more than 50 per cent. of refined sugar, whilst the cane sugar from other countries yields on the average 90 per cent. the residue in each case consisting of molasses and waste. In actual sugar, therefore, India's production per acre is less than one-third that of Cuba, one-sixth that of Java and one-seventh that of Hawaii. In spite of its 22 million acres under sugar, seven times the acreage of Java, the imports of sugar during the four pre-war years, averaged 724,000 tons, valued at Rs. 12·71 crores and during the four war years 532,000 tons, valued at Rs. 13·43 crores. The bulk of this came from Java.

A Sugar Board.—The Committee held that the organization of the sugar industry on the Java model adapted to suit the needs of India is essential to progress. Such an organization must be largely official at the outset but the object should be to hand it over almost entirely to non-official control at as early a stage as possible. It should take the form of an Indian Sugar Board with five official and six non-official members. In the first instance, all the members would have to be nominated by Government but the first duty of the Board should be

COMMITTEE.

to evolve a scheme to secure representative appointments. Simultaneously with the establishment of the Board should be that of an Imperial Research Institute with three divisions, agricultural, chemical and engineering, which should control the work on the research stations proposed for the provinces as well as that on the cane-breeding station at Coimbatore, the excellent work in progress at which should be continued on its present lines except that the attempt to evolve improved varieties of cane for Upper India which will withstand the indifferent usage of the ordinary canegrower should be abandoned as impracticable. The functions of the Sugar Board would be to control the policy of the Research Institute and the administration of its funds, to advise Government on all matters affecting the sugar industry and to supervise the issue and receipt of returns by the Research Institute. The cost of the Board would be negligible as membership would be honorary. As regards that of the Institute, the sugar industry should be expected to contribute and the first representative Board should evolve a practical scheme of contribution. It is held that the peculiar conditions of India especially the importance of the gur industry preclude the complete elimination of Government interest in the Institute and that, therefore, even when the industry is in a position to take over the main control, its funds should be provided by a voluntary levy on factories supplemented by a Government subsidy to ensure consideration of the interests of the small grower. The work of the Board and the Institute must be supplemented by the establishment of a Sugar School forming an integral part of the Institute and providing the specialised technical training in field and factory which will qualify men to enter the sugar industry as competent workers. The Sugar School should eventually be affiliated to a University and should then confer a B. Sc. degree on successful students. A site in the Basti or Kheri district of the United Provinces is suggested as suitable for the location of the Research Institute and the headquarters of the Sugar Board. No announcement of action on the Report of the Commission has yet been made.

ABSORPTION OF GOLD (both coin and bullion) IN INDIA.

Note.—The quinquennial average figures are inserted only for comparative purposes. The progressive total of additions to stock (item 9) and net progressive absorption (item 10) are calculated on the annual figures and are not based on these averages. Item 9 is the sum of the yearly figures in item 5 and item 10 the sum of the yearly figures in item 8.

(a) Excludes gold imported and exported on behalf of the Bank of England.

(b) Figures are for calendar year ending 31st December.

DEPARTMENT OF COMMERCIAL INTELLIGENCE.

The Department of Statistics was reabsorbed into the Department of Commercial Intelligence with effect from the 1st December 1922. The joint department has its office at No. 1, Council House Street, Calcutta, the headquarters of the Director-General. It embraces two distinct classes of work: (a) the collection and dissemination of information connected with overseas trade which may be of use to Indian firms, and (b) the compilation and publication of All-India statistics. The latter are published in a series of volumes of which the most important are the sea-borne Trade Accounts, monthly and annual, Statistical Abstract, Agricultural Statistics (in two volumes), and the Review of Trade. The department also publishes a weekly journal—"The Indian Trade Journal"—the principal features of which are (a) information as to tariff changes in foreign countries which affect Indian interests, (b) notices of tenders called for by Government departments and public bodies, (c) crop reports and forecasts, (d) Government orders, communications and other notifications affecting trade, (e) analysis of Indian trade statistics, (f) market reports, prices and trade movements of the staple exports and imports, (g) trade enquiries for securing trade introductions, (h) summaries of the leading features of consular and other trade reports, and (i) abstracts of the proceedings of the various Chambers of Commerce in India.

The Department also administers the COMMERCIAL LIBRARY AND READING ROOM located at No. 1, Council House Street, Calcutta. This was at first a small departmental library used for the purpose of answering enquiries, but in 1919 the Government of India agreed to the formation of a combined technological library of reference in Calcutta in place of the separate libraries attached to the Departments of Commercial Intelligence, Statistics, and Patents and Designs, and the resultant Commercial Library and Reading Room was placed under the administrative control of the Director-General. It has now been expanded into a first-class technical library containing over 9,000 volumes as well as Indian and foreign statistical publications, and 200 technical and commercial journals and market reports. Ordinarily books are consulted in the Library, but they are also available on loan upon deposit of value.

The Department works in close co-operation with Directors of Industries and other Government Departments in India, with the Indian Trade Commissioner in London, with His Majesty's Trade Commissioners in India and the Dominions, and with Consular Officers in various parts of the world. And the yearly increase in its correspondence shows that it is steadily being used more and more both by firms in India and by overseas firms interested in Indian exports.

INDIAN COTTON DUTIES ACT.

The origin of this fiscal measure dates back to 1894 when the embarrassment caused to the finances of India by the fall in exchange drove the Government of India to the necessity of adopting measures to increase their sources of revenue. Among these measures was the re-imposition of the Customs Tariff which had been in force prior to 1882 subject, however, to this difference that cotton yarns and fabrics, which had formerly been subjected to an import duty, were in 1894, excluded from the list of dutiable articles. This partial re-imposition of import duties had been recommended by the Herschell Commission which, in reporting in 1893 on the currency question, had favoured this method of adding to the revenue as being the least likely to excite opposition. In point of fact, however, this recommendation which was carried into effect in the Indian Tariff Act of March 1894 gave rise to very marked opposition. In support of their policy the Government appealed to the Resolutions passed in 1877 and reaffirmed in

1879 by the House of Commons, the first of which had condemned the levy of import duties on cotton fabrics imported into India as "being contrary to sound commercial policy," while the latter called upon the Government of India to effect "the complete abolition of these duties as being unjust alike to the Indian consumer and to the English producer." It was, however, an open secret that the decision to exclude from the list of dutiable articles cotton yarns and fabrics was not the decision of the Government of India but that of the Secretary of State. It was pertinently pointed out that the volume of trade in cotton goods and yarns then represented nearly one-half of the total imports from abroad, and that the exemption of these important commodities when practically every single other commodity was being subjected to an import duty could not be justified on its merits as a sound fiscal measure, much less when it was an admitted fact that the Budget would still show a deficit.

Excise Duties Imposed.—The opposition to this measure, though it failed to secure its rejection in the Legislative Council, was strong enough to induce the Secretary of State to reconsider the matter. Yielding to the united representations of the Government of India and of Indian public opinion, His Majesty's Government eventually agreed to the re-imposition of import duties on cotton yarns and fabrics provided that it could be shown that such a measure was necessitated by the position of Indian finances, and that it was combined with an Excise duty which would deprive the import tax of any protective character. Accordingly in December 1894, consequent on the further deterioration in the financial position, two bills were introduced in the Legislative Council. The first of these subjected cotton yarns and fabrics to the general import duty of 5 per cent. *ad valorem*. The second imposed an Excise duty on all cotton yarns of 20's and above produced by Mills in British India. In introducing this latter Bill the then Finance Minister, Sir James Westland, was careful to explain that the policy underlying its provisions had been imposed on the Government of India by the Secretary of State in pursuance of the Resolution of the House of Commons quoted above. The provisions of this particular Bill are of little interest. From the first it was recognised that they were unpractical, Lancashire and Indian spinners disagreed as to the point at which the line should be drawn exempting Indian yarns from the Excise Duty. Practical difficulties were pointed out by Indian spinners as to the impossibility of spinning precisely to a particular count. From the Lancashire point of view it was contended that the Bill offered facilities for evasion while it was admitted that under the system adopted in the Bill, the taxation of Indian and Lancashire products was not being carried out on a similar basis.

Act of 1896.—The Act was in fact doomed to be short-lived, and in December 1895 the Government of India were compelled to reconsider the whole position and to introduce an entirely new measure which became law in January 1896 as the Indian Cotton Duties Act II of 1896. This measure proceeded from two conclusions, namely, that no attempt should be made to obtain any duty from yarns whether imported or locally manufactured, and that an equal rate of duty should be applied to all woven goods whether imported or of Indian origin. With the object of conciliating the opposition, the rate of duty was fixed at 3½ per cent. as opposed to the general rate of Customs duty of 5 per cent. The main provisions of the Act provided that the assessment for the purposes of collecting the Excise duty should be based on returns submitted by the mill-owners and that provision should be made for a rebate in the case of woven goods exported out of India. No control beyond a requirement that statistical returns should be furnished was attempted in respect of spinning mills. On the other hand certain concessions in the matter of import duty on Mill stores were made by executive order so as to place Indian Mills on a footing more or less equal to their Lancashire competitors.

Criticisms of the Measure.—It is not possible within the limits of the present article to do more than summarise the criticisms with

which this measure was received in India. Much of the opposition was based on grounds of a transient character; as for instance that the Indian industry was then in a state of continued depression and that it had been hard hit, particularly in respect of its export trade, by the currency legislation, and by the uncertainty as to the fiscal policy of Government. In some quarters objection was offered to the exemption of yarn, which it was alleged, would place the Indian hand weaving industry at an advantage with the Indian power weaving industry. But the hostility to this measure, as also to the earlier measures already described, clearly proceeded from the feeling that the policy of the Government of India and of the Secretary of State had been dictated by Lancashire, and that the action of Lancashire was due not so much to the fact that there was any real competition between Indian and Manchester goods, but to a desire to handicap the Indian industry whose progress was already causing uneasiness to Lancashire interests. It was argued that the imports from Lancashire were practically all of the higher counts, which, for climatic and other reasons, Indian mills could not produce; that in any case the advantage to the Indian millowner of the import duty was inconsiderable and was counterbalanced by certain drawbacks, arising from the inferiority of Indian labour, which could not be overcome; and that this advantage, such as it was, could scarcely be said to have a protective character, in view of the higher cost of initial equipment in the case of an Indian mill which has to import its machinery, and of working expenses consequent on the scarcity of skilled labour and on the necessity of importing stores required in the production of cloth. Finally, from the standpoint of the consumer, very severe criticism was directed against the reduction, in favour of imported cotton goods, of the general rate of duty from 5 per cent. to 3½ per cent. on the ground that the effect of the legislation would relieve the richer classes who were consumers of the finer Manchester fabrics and impose new taxation on the poorer classes whose requirements were met by the Indian mills.

New Factors in the Situation.—Since the passing of this measure into law the policy of the Government of India in this respect has frequently been the subject of attack in the press and in the Legislative Councils while it has also formed the subject of continued representations by the industrial interests affected and political organizations. In more recent years the agitation in favour of the abolition of the Excise duties has been revived by the growth in England of a strong body of public opinion in opposition to the policy of Free Trade. Advantage has been taken of this new phase in English economic thought to press on behalf of India the acceptance of a policy of Protection and the removal of the Excise duties is now claimed by the opponents of this measure as a necessary corollary of the application to the British Empire of the principles associated with the name of Mr. Chamberlain. A new factor in the situation which has strengthened the position of those who are in opposition to the Excise duties is to be found in the severe competition which Indian mills have to face in China as well as in India from

the Japanese industry. The Japanese market was lost to India in the early years of this century. More recently, however, Japan has entered as a competitor with India into the China market, while within the last few years it has pushed its advantage as against the Indian millowner in the Indian market itself. On two occasions within the last ten years the question of Excise duties has come prominently to the front as a result of debates in the Viceroy's Council. The official attitude is firmly based on the position that the Excise duties stand and fall with the import duties. Against such an attitude all arguments based either on the advantages of a Protectionist as opposed to a Free Trade policy or on the handicap to which the present system exposes the Indian millowner can, of course, make no head way. The Government of India are confronted with a heavy recurring loss in their revenues as a result of the abolition of the opium traffic.

Policy of 1917.—The policy of Government towards the Cotton Duties underwent a further development in 1917. In the budget of that year provision was made for interest and sinking fund charges on £ 100 millions, the contribution of India towards the cost of the war. This demanded in addition to the natural increase in the revenues fresh taxation to the extent of £ 3 millions per annum. Amongst the expedients adopted to produce this revenue was the raising of the Import duty on cotton goods from 3½ per cent. to 7½ per cent. which is the general tariff rate. At the same time the cotton excise duty was fixed to remain at the previous figure of 3½ per cent. thus giving the indigenous industry a slight protection to the extent of

4 per cent. The question of the abolition of the Excise entirely had to be dismissed from consideration in view of the demands upon the exchequer, as it was estimated to produce in 1917-18 £ 320,000. By means of the increase in the tariff on Cotton Duties the Finance Member estimated to produce an additional £ 1 million per annum. The proposal was received with immense satisfaction in India as a step towards the righting of what is almost everywhere regarded as a reverse economic wrong. It aroused very vehement protests in Lancashire where the cotton industry organised its political vote and brought great pressure to bear upon the Secretary of State to withdraw the measure. Mr. Austen Chamberlain, the then Secretary of State for India, stood firm and with the Government at his back refused to budge an inch from the position which he had taken up in supporting the Government of India in this matter. There were anxious moments in the House of Commons when the Labour Party joining with the Irish Nationalists and the Lancashire vote mobilised its forces against the Government especially as the attitude of Mr. Asquith and his following was obscure. In the end Mr. Asquith gave his support to the Government policy on the understanding that this, in common with all other fiscal issues, would be reconsidered at the end of the war. With this support, the Bill was carried through the House of Commons by a large majority. The policy laid down in 1917 has been maintained. The Excise Duty remains stationary at 3½ per cent. for purely revenue purposes. The imports of piecegoods have been subjected to the same tariff as other imports in all variations of the Customs duties. (See Customs Tariff).

THE INDIAN COTTON COMMITTEE.

A resolution issued by the Government of India in September 1917 announced the appointment of a Committee to examine the possibilities of increasing the cultivation of long-stapled cotton in India, of improving existing methods of ginning and marketing cotton, of preventing adulteration, damping and mixing, of improving the accuracy of the cotton forecasts and, generally, of making the statistical information published by Government of greater utility to the cotton trade. The Committee were also directed to submit recommendations in regard to the staff required and the organization necessary for the development of the cultivation of long-stapled cotton in tracts which they considered suitable for that purpose.

The Committee consisted of the following:—
Mr. J. MacKenna, C.I.E., I.C.S., Agricultural Adviser to the Government of India, President.
Mr. N. N. Wadia, C.I.E., Ex-Chairman, Bombay Mill Owners Association, Mr. F. Hodgkinson, Member of the Council of the British Cotton Growing Association, Mr. H. F. Ashton, Executive Engineer, Punjab, Mr. G. S. Henderson, Imperial Agriculturist, and Mr. W. Roberts, Principal, Lyallpur Agricultural College, Members. Mr. F. Noyce, I.C.S., Secretary.

A full summary of the **Report** of the Committee, appeared on page 291-294 of the Indian Year Book, 1922. The Committee in their report conclude that, so far as separate figures are available, of the 4,728,000 bales of cotton produced by India in a normal season, 728,000 fall within the Lancashire definition of long staple cotton and an additional 478,000 bales within the Bombay definition.

They emphasize that, of the methods by which an improvement in the quality and an increase in the output of Indian cotton can be secured, botanical work is the most important. The Report points out that the output of cleaned cotton to the acre in India is only 85 pounds, whereas in the United States it is 200 pounds, and that improvements in agricultural practice should very considerably reduce this difference. The Committee recommend considerable expansion of the Agricultural Department in order to extend its work for cotton.

The possibilities of the extension of the cultivation of long staple cotton under irrigation in the cotton growing Provinces of North India—the Punjab, the North-West Frontier Province, the United Provinces and Sind—are examined in great detail in the Report.

One of the main problems dealt with by the Committee is that of securing to the cultivation an adequate price for the pure or superior varieties of cotton grown as the outcome of the recommendations in the first part. With this object, they make comprehensive recommendations. They also make important recommendations in regard to the improvement of cotton forecasts. The Committee suggest not only the better organization of the Agricultural Department but also of the Cotton Trade by the establishment of a Central Cotton Trade Association in Bombay, to be known as the East India Cotton Association which, as far as the control of the cotton trade is concerned, would take the place of the seven distinct bodies representing different branches of the trade which were in existence at the time the Report was written. Finally, the Committee make provision for much closer connexion between the Agricultural Department and the Cotton Trade, by the institution of a Central Cotton Committee to which all connected with cotton, whether agriculturally or commercially, could able to turn to for advice or assistance. They recommended that the Committee should consist of about 20 members including the following nine official members: the Agricultural Adviser to the Government of India, who would be President, six agricultural experts working on cotton from the six great cotton growing Provinces, the Director-General of Commercial Intelligence, and the Director of Statistics. The remaining members, with the exception of a representative of the Co-operative Department, who might be either an official or a non-official, should they said represent Chambers of Commerce and similar bodies and would also include a representative of Lancashire. The functions of the Committee would be almost entirely advisory but its advice would carry very great weight.

The proposal to reorganise the Bombay Cotton Trade in one efficient organisation, to be called the East India Cotton Association, at first failed

through the jealousy of the small speculative element, resentful of any form of control, but was eventually brought into being, with the assent of all parties, in 1922.

The first meeting of the Central Committee recommended in the Report was held in July 1921, when it assembled in Bombay, and it has since accomplished much constructive work. It has advised the Government of India regarding the preparation of legislation for the restriction of cotton transport, the regulation of gins and presses and the compulsory rendering of cotton statistics. Legislation in regard to the first was introduced in the Central Legislature in September, 1922, and referred to a Joint Select Committee of both its Houses. The Committee has placed itself in touch with such organisations as the Empire Cotton Growing Corporation and the Cotton Industry Research Association and has made arrangements for a study of changes in export demand, and for a study of Indian mill consumption in detail. Several provinces have now taken tentative action in regard to the 1917 Committee's recommendations that concern them.

The Committee is specially devoting its attention to tests of new cottons for the Agricultural Department, research work in relation to the measurable characters of cotton and their spinning value and a study of the intrinsic spinning value of Indian cottons. As regards the first and last it has urged the need for the establishment of a technological research establishment in Bombay. As regards the second it has made special representation to the Government of India.

Provision for technological research and for the other activities recommended by the Committee will require money and to raise this the Committee has recommended the levy of a cess of four annas a bale on the commercial cotton crop (excluding domestic consumption) which is estimated to produce Rs. 8 lakhs a year.

ADULTERATION OF PRODUCE.

In August 1917 the Department of Commerce and Industry, Government of India, issued a long memorandum to Chambers of Commerce in India on the subject of the adulteration of Indian produce. This memorandum said:—Cotton is still watered; jute is still watered; groundnuts, hides, indigo, oils are freely adulterated; this at least is common knowledge. It is unnecessary to dilate on the loss to Indian trade which this practice of adulteration must involve, but it appears to the Government of India to be specially important at the present time to endeavour to focus attention on the matter. It seems reasonable to suppose that the present war will be followed by a period of keen competition among industrial nations for materials of all descriptions and for products which India should be in a specially favourable position to supply. But it cannot be expected

that India will be able to capture and retain the extended markets which should fall to her share, if steps are not taken to effect a radical improvement in the reputation which, the Government of India fear, some of her products have only too justly merited.

Attitude of Government.—After reviewing the facts concerning the adulteration of wheat, cotton, jute, leather, hemp, and bees' wax the memorandum continued:—it will be seen from the preceding sketch of previous discussions on this subject that the Government of India have been consistently opposed to any attempt to meet the evil by legislative measures. They have held the view that any such measures would be extremely difficult to carry into effect, would seriously hamper trade, and would probably, in any case, prove ineffectual as a practical remedy

They have maintained the opinion that the proper agency for dealing with these abuses is the trade itself, and that no intervention on the part of Government is desirable. To these views they are still inclined to adhere. At the same time, they would welcome any suggestions on the subject, and would be glad to co-operate, if further discussion should show that any action on their part is at once feasible and desirable. It seems to them, however, more probable that the situation could be most satisfactorily dealt with without any intervention on the part of Government. If the leading exporting firms of any particular commodity in India would arrange with their leading buyers that the latter should insist on freedom from adulteration, an improvement could probably be more readily effected by this means than by any action on the part of Government. This would seem to be the most fruitful line of attack, but it has also been suggested that Chambers of Commerce in India might organise some system of certifying to the purity of products before export. This suggestion seems worthy of consideration.

Adulteration of Ghee.—In the autumn of 1917, considerable feeling was evoked in Calcutta by the practice of adulterating ghee. For instance, a panchayat of Marwaris excommunicated five ghee dealers, in one case two partners were excommunicated for one year and ordered to pay Rs. 1,00,000 towards the purchasing of grazing ground for cattle. In another case a father and son were fined Rs. 25,000 and in other cases the fines ranged from Rs. 500 to Rs. 1,000. Feeling waxed so strong that a deputation asked the Governor to move the Government of India to pass an ordinance, pending legislation, penalising both the adulteration of ghee and the selling or stocking of adulterated ghee. Shortly afterwards an Emergency Bill was introduced, by Sir

S. P. Sinha, in the Bengal Legislative Council to amend the Calcutta Municipal Act, with special reference to ghee adulteration. Sir Satyendra, in introducing the Bill, said that the existing law had failed to check the practice of adulterating ghee and selling adulterated ghee in Calcutta. In view of the evils resulting from widespread adulteration it was considered necessary that more stringent measures should be taken to provide for the purity of the article and to penalise the manufacture, storage, and sale of ghee that was adulterated. In this Bill a definition for adulteration had been introduced by which ghee must not consist of any article which was not extracted from milk. The penalty imposed under the Bill for offences ranged from a fine of Rs. 200 to Rs. 1,000. The Bill was taken up for consideration after suspending the rules of business and passed.

Burma Ghee Adulteration Act.—In Burma a similar Bill was passed in October, 1917, when the mover of the Bill explained that all that the Bill proposed was to ensure that a purchaser who desires to obtain ghee should be entitled to receive an article which was derived exclusively from milk. If purchaser desired a cheaper substitute, the Bill did not prevent him from obtaining it. It did, however, prevent him from receiving such substitute under the impression he was purchasing ghee. It was not anticipated that the Bill would effect any dislocation of any established trade. It would be necessary for manufacturers and dealers of mixtures which had hitherto been sold under the name of ghee to arrange to sell such mixture under distinctive names in order that the customer might be fully aware he was not purchasing ghee. If such names were speedily adopted, the evils resulting from the sale of these mixtures as ghee would be prevented without any loss or dislocation of industry.

Tea.

Tea cultivation in India is chiefly in Assam, Bengal and Southern India, the cultivation elsewhere being comparatively unimportant. The total production of tea in India was estimated at 311 million lbs. in 1922, as compared with 274 million lbs. in 1921 and 345 million lbs. in 1920. Assam contributed 64 per cent. or nearly two-thirds of the total, Northern India (excluding Assam) 24 per cent. and Southern India nearly 12 per cent. The statement below shows the development of the industry during the past 17 years :—

	1905	1915	1920	1921	1922
ACREAGE.	Acres	Acres	Acres	Acres	Acres
Assam	339,200	382,800	420,200	417,200	412,500
Rest of Northern India ..	153,500	181,300	193,800	200,600	203,300
Southern India	33,800	68,000	88,400	91,200	91,900
Burma	1,500	2,800	1,700
Total ..	528,000	634,900	704,100	709,000	707,700
PRODUCTION	lbs. (1,000)	lbs. (1,000)	lbs. (1,000)	lbs. (1,000)	lbs. (1,000)
Assam	151,905	245,752	234,314	181,503	198,925
Rest of Northern India ..	57,478	94,695	75,237	61,362	75,120
Southern India	11,910	31,610	35,655	31,399	36,547
Burma	107	146	134
Total ..	221,400	372,203	345,340	274,264	310,598

Exports during the same years were as follows :—

Exports of tea by sea to foreign countries.

	1905-06	1915-16	1920-21	1921-22	1922-23
	lbs. (1,000)	lbs. (1,000)	lbs. (1,000)	lbs. (1,000)	lbs. (1,000)
From Northern India ..	199,768	301,429	251,508	284,378	253,990
From Southern India ..	14,399	37,035	34,238	29,493	34,296
From Burma	57	6	6	7	10
Total ..	214,224	338,470	285,752	313,878	288,296

The total exports during 1922-23 were valued at Rs. 22.04 lakhs, as compared with 314 million lbs., valued at Rs. 18.22 lakhs, in the previous year. The quantity exported to the United Kingdom decreased by 8 per cent. from 269 to 248 million lbs., but the value of the exports increased by 19 per cent. from Rs. 16.12 to Rs. 19.14 lakhs. The consumption in the United Kingdom expanded less rapidly than in 1921, but the smaller amount imported together with larger re-exports effected a substantial reduction in the

heavy stocks. Direct shipments to Canada and the United States were smaller than in the preceding year, but larger than in 1920-21. Australia considerably reduced her demands from 7½ to nearly 4 million lbs., due mainly to the competition of tea from Java. The exports to Ceylon also decreased from 4 to 2½ million lbs. On the other hand, Mesopotamia and Persia increased their purchases. Bengal supplied 88 per cent. of the exports and Madras nearly 11 per cent.

EXPORTS AND PRICES.

The following table shows the quantity of Tea exported by sea and by land to Foreign Countries from India, Ceylon, and China in the years 1896-97 to 1922-23 with variations in index numbers, taking the figure of 1896-97 as 100†:—

	—	India.	Ceylon.*		CHINA.†		Java.
			lbs.	lbs.	Black and green.	Brick, table and dust.	
					lbs.	lbs.	lbs.
1897-98	..	152,344,905 [101]	114,460,318 [104]	137,097,600 [85]	75,751,867 [98]
1898-19	..	158,539,488 [105]	122,395,518 [111]	147,967,200 [91]	68,017,067 [87]
1899-1900	..	177,163,999 [118]	129,661,908 [111]	153,669,067 [95]	71,205,067 [91]
1900-01	..	192,300,658 [128]	149,264,603 [136]	144,270,333 [90]	52,190,667 [66]
1901-02	..	182,504,356 [121]	144,275,608 [131]	119,390,000 [74]	42,740,533 [54]
1902-03	..	183,710,931 [122]	150,829,707 [137]	128,226,333 [79]	78,512,400 [100]
1903-04	..	209,552,150 [139]	149,227,236 [135]	140,007,867 [88]	83,813,600 [107]
1904-05	..	214,300,325 [142]	157,920,333 [143]	132,366,933 [83]	61,493,733 [78]

The following table shows the quantity of tea, green and black, produced, exported available for consumption in India during the years 1918-19 to 1922-23 (the figures in the last column being calculated after adding stocks left from previous year and deducting those left at end of year) :—

	Production.	Net exports.	Available balance
	lbs.	lbs.	lbs.
1918-19	380,458,975	312,012,408	50,446,567
1919-20	377,055,639	370,372,501	29,897,138
1920-21	345,339,576	276,510,111	43,958,465
1921-22	274,263,771	304,829,523	30,568,748
1922-23	310,660,513	281,473,825	28,390,183

Note.—The stocks at the end of 1918-19 were abnormally high owing to lack of freight.

Quantity of Indian Tea exported by sea* (distinguished according to countries of final destination) and by land, in the years 1918-19 to 1922-23.

* Including shipments from the State of Travancore.

(d) Tea consigned from British India to Ceylon is almost entirely transhipped at Colombo to other countries and does not, therefore, appear in the Ceylon Customs Returns as imports into Ceylon.

† Includes Mesopotamia.

Coffee.

The history of the introduction of coffee into India is very obscure. Most writers agree that it was brought to Mysore some two centuries ago by a Mahomedan pilgrim named Baba Budan, who, on his return from Mecca, brought seven seeds with him. This tradition is so universally believed in by the inhabitants of the greater part of South India, that there seems every chance of its being founded on fact. About the beginning of the 19th century there is no doubt coffee had found its way to India, and in 1823 a charter was granted to Fort Gloster, near Calcutta, authorising it to become a cotton mill, a coffee plantation and a rum distillery. Some of the coffee trees planted in fulfilment of that charter are supposed to be still alive, and about the same time coffee was successfully grown in the Botanic Gardens, Calcutta; but the industry of coffee planting nowhere found an abiding place on the plains of India but migrated to the hills of South India, in Mysore more especially, and thus into the very region where tradition affirms it had been introduced two centuries previously.

The first systematic plantation was apparently Mr. Cannon's near Chikmagalur. This was established in 1830. It is supposed, however, that Major Bevan may have actually grown coffee on the Wynad at a slightly earlier date and that Mr. Cockburn's Shevaroy plantation bears the same date as Mr. Cannon's. In 1840 Mr. Glasson formed a plantation at Manantoddy, and in 1846 plantations were organised on the Nilgiri hills.

The Position of the Industry.—The number of reporting plantations in the year 1922-23 was 2,998, covering an area of 227,676 acres, as against 2,964 with an area of 216,746 acres reported a year ago. New land planted with coffee in these plantations during the year amounted to 7,224 acres, while the area of old cultivation abandoned was 2,842 acres. This represents a net increase of 4,382 acres over the total area (127,272 acres) under coffee for 1921-22. The total reported area under cultivation in the year 1922-23 was, therefore, 131,655 acres, or an increase of 8 per cent. over that of the preceding year. Of this total area, Mysore accounted for 52 per cent., Coorg 24 per cent., Madras 22 per cent., and Cochin and Travancore together 2 per cent.

The total reported production of cured coffee during the year was 25,467,687 lbs., as compared with 20,586,644 lbs. (revised) in the preceding year—the yield per acre of plucked area being 296 lbs. (202 lbs.) in Madras, 251 lbs. (182 lbs.) in Coorg, 177 lbs. (179 lbs.) in Mysore, 149 lbs. (49 lbs.) in Travancore and 126 lbs. (128 lbs.) in Cochin.

It is reported that in some of the coffee-growing districts coffee is giving way to tea, or where the altitude is not prohibitive, to rubber. The advent of large supplies of cheap

Brazilian coffees in the markets of Europe has, by bringing down prices, no doubt injured the coffee industry of India very seriously.

Exports of Coffee.

The principal customers of Indian coffee are France and the United Kingdom; they reduced their requirements by 20,200 cwts. and 28,200 cwts., and took 60,700 cwts. and 57,000 cwts., respectively, in 1922-23. With the exception of Asiatic Turkey (including Mesopotamia) which took 3,000 cwts. more than in the preceding year, the exports to other principal importing countries decreased. In the six months, April to September, 1923, the exports increased to 122,500 cwts., as compared with 77,000 cwts. in the corresponding period of the previous year. All the principal importing countries took larger quantities, the most noticeable increase being in France, the United Kingdom, Arabia, and the Bahrain Islands.

Labour.—The daily average number of persons employed in the plantations during 1921-22 was returned at 69,191, of whom 42,036 were permanently employed (namely, garden labour 26,209 and outside labour 15,827) and 27,155 temporarily employed (outside labour), as compared with 74,945 persons (32,598 garden and 17,736 outside labour permanently employed and 24,611 temporary outside labour) in 1920-21.

The Public Trustee.

The Public Trustee of England is a Government Official created by Statute (Public Trustee Act, 1906), whereby the State acts as an executor or as a trustee under Wills, and as a trustee under Settlements, whether these instruments are new or old, and in other offices of an analogous character.

The office has been a great success; in the seven years that it has been open the value of the trusts in course of administration have amounted, in round figures, to £50,000,000, while the estimated value of Wills lodged in the Department which have yet to mature is put at some £59,000,000, showing a total value of business of all kinds negotiated at £110,000,000.

Fees chargeable.—The office is now entirely self-supporting and is no charge upon the tax-payer. A provision of the Statute declares that the Office is to make no profit but to charge only such fees as may provide the working expenses and constitute a reserve fund against the liabilities assumed by the State for breach of trust. In accordance with this mutual principle the fees have already been reduced from their original scale, and the cash surplus of fees over expenses, regarded as the nucleus of a reserve fund for all contingencies, is now £14,585.

The main fees are of two kinds—a fee on capital and a fee on income. The fees on capital are taken in two instalments—an instalment of half taken at the beginning, and another instalment of half taken at the end of a trust—each instalment being calculated at the following rates:—

On the first £1,000, fifteen shillings per cent.

On the excess of £1,000 to £20,000, five shillings per cent.

On the excess of £20,000 to £50,000, two shillings and six pence per cent.

On the excess of £50,000, one shilling and three pence per cent. The **Fee on income** is one per cent. if, as is usual, the income be paid direct from its source to the person entitled, on any income in excess of £2,000 a year the fee is only $\frac{1}{2}$ per cent. Where the income is paid through the Department then the fee is two per cent. up to £500 a year, and one per cent. on any excess of £500 a year, and $\frac{1}{2}$ per cent. on income in excess of £2,000 a year. The fee on investment is $\frac{1}{2}$ per cent.; the Public Trustee, out of this fee paying the brokerage. There is power to vary these fees to meet the peculiar circumstances of special cases; but owing to the low range of the fees, and their mutual character the power of reduction is but seldom exercised, except perhaps in the case of large trusts.

The Department has been organised upon lines followed by commercial organisations. Forms are avoided wherever possible, the methods of the Office prescribing prompt attention to all matters within the day,

The particulars of any trust in which it is desired that the Public Trustee should act may be brought to his notice by letter or by personal interview, and upon his assent being obtained, his appointment should be effected in the ordinary way as in the case of private trustees. In the case of a Will about to be made, his appointment can be secured by the simple provision "I appoint the Public Trustee of England as the executor and trustee of this my Will."

One of the forms of trusteeship which would appeal to English people residing in India is a scheme known as a "**Declaration of Trust**." An official pamphlet explains that the Public Trustee's services have been requested by people who, either because of professional or business pre-occupation, or from want of experience in dealing with money matters, or from the disadvantages which might attach to Governmental, professional or business disabilities abroad, are not well placed to select and supervise their investments. It would appear that the services of the Department in this matter were first requisitioned by officers taking up appointments in India; and, following out their request for individual assistance, this scheme of trust came to be devised, and has been found to commend itself to the circumstances of a very large circle of persons similarly disadvantaged. A Declaration of Trust is an **inexpensive form of trusteeship** by virtue of which the owner practically retains full control over his capital. The property is made over to the Public Trustee either in the form of money to be invested or specific securities transferred into his name; and thereupon the Public Trustee executes a short "declaration" setting out that he holds the money invested or the securities in trust for the transferor. The result of this is that income, as it accrues, is paid to the owner or to any beneficiary as he may direct. A wide field of investment is permissible, as the trust provides that the funds may be invested as the owner may from time to time direct. As the pamphlet sets out interest at the rate of at least 4 per cent. is to be looked for under the scheme from investments of a non-speculative character. It should be understood that this form of trusteeship is not analogous to a bank deposit, where the return of the capital at par, given the solvency of the bank, is expected. Investments are selected with the greatest care in consultation with the owner, but it must be understood that the Public Trustee does not accept responsibility for any fluctuation of any of the investments chosen. The fees payable for this scheme of trusteeship, so far as the capital fees are concerned, are half those payable in the case of an ordinary settlement. The other fees are the same as the ordinary fees.

The appointment of the Public Trustee secures certain definite advantages inasmuch as he is by Act of Parliament a Corporation Sole; and thus it is said the Public Trustee never dies, so that the expense of appointment of other Trustees is permanently avoided. His

integrity is guaranteed by the State, while the measure of his success would indicate that he is necessarily experienced and skilled in his duties.

Close personal attention is given by the Public Trustee and his senior officers to the details of every trust; and as regards the work of investment, a large organisation has been set up to give the best consideration not only to the selection of investments but to the duty of keeping them under frequent observation.

An Advisory Committee of men of recognised authority has, in the past year, been appointed by the Lord Chancellor to assist the Public Trustee by a quarterly review of the investments made. In the last Annual Report the Public Trustee speaks of having secured a return of £3-19-4 per cent. upon his trustee investments and a return of £4-10-1 per cent. upon his non-trustee investments.

The success of the Department would seem to show that there is a widespread public need in England for such an Office, and the energy and efficiency with which the Department has been constituted and conducted has been a great factor in commending it to the public. The State Guarantee is also doubtless a factor of great importance. A statutory rule pro-

vides that strict secrecy shall be observed in respect of all trusts administered in the Department.

The administration is subject to an audit by the Controller and Auditor-General (the Government Auditor), while the internal organisation has been built up upon the principle of a check and counter-check upon the administration.

An important section of the Statute gives the Public Trustee power to direct an audit and investigation of the condition and accounts of any trust.

Officials in India will doubtless tend to make an increasing use of the Department. As a Government Office, its stability will commend itself to them as a medium to safeguard their interests under Wills or Settlements which can be entirely relied upon, and free from the risks and expense attendant upon any other forms of trusteeship.

Further information upon details and copies of the official pamphlet, reports and rules, etc., can be obtained of the official agents to the Department, viz.:—Messrs. King, Hamilton & Co., Calcutta and in Bombay, Messrs. King, King & Co., whose head office is Messrs. Henry S. King & Co., 65, Cornhill, London, E. C.

THE ADMINISTRATOR-GENERAL.

In India the functions of a Public Trustee are divided in each Province between two officials, the Administrator-General and the Official Trustee.

The office of **Administrator-General** was first constituted by Indian Act VII of 1849. There were several later enactments on the subject, all of which have ceased to be in force. The present law is to be found in Indian Act III of 1913, which contains the following provisions:—There are three Administrators-General in each of the Presidencies of Bengal, Madras, and Bombay. Their combined jurisdiction covers the whole of British India. The Administrator-General is entitled to letters of administration, when granted by a High Court, unless they are granted to the next of kin. In the other Courts he is entitled to letters in preference to a creditor, a legatee other than a universal legatee, or a friend of the deceased.

If any person who is not an Indian Christian, a Hindu, Mohammedan, Persian, Buddhist dies leaving within any Presidency assets exceeding the value of Rs. 1,000 and if no person to whom any Court would have jurisdiction to commit administration of such assets has, within one month from his death, applied in such Presidency for probate or letters of administration, the Administrator-General is required to apply for letters of administration. In case of apprehended danger of misappropriation, deterioration, or waste of assets left by the deceased in the towns of Calcutta, Madras, and Bombay, the High Courts may direct the Administrator-General to apply for letters of administration. He can also be required to collect and hold assets until a right of succession or administration is determined. Probate and letters of administration granted to an Administrator-

General have effect throughout the Presidency but the High Court can direct that they have effect throughout one or more of the other Presidencies. A private executor or administrator may with the assent of the Administrator-General transfer the assets of the estate to the Administrator-General. There are provisions in the Act with regard to the revocation of grants and the distribution of assets. When the assets do not exceed Rs. 1,000 in value, the Administrator-General may, when no probate or letters of administration have been granted, give a certificate to a person, claiming otherwise than as a creditor to be interested in such assets, entitling him to receive the assets. There is also power in certain events to give such certificate to a creditor. There is a further power to send the residue of the assets to the country of domicile of the deceased. The Government of India is required by the Act to make good all sums for which the Administrator-General would be personally liable if he had been a private administrator, except where the Administrator-General and his officers have in no way contributed to the liability.

Fees both on capital and on income are payable out of the estates taken charge of by the Administrator-General. The fees on capital vary from 3 per cent. on the gross value in the case of small estates to 2 per cent. in the case of large estates. The fees on income vary in the case of moveable property from 2 per cent. to 3 per cent., and in the case of immovable property from 3 per cent. to 5 per cent. When the Court has directed the Administrator-General to collect and hold the assets a fee of 1 per cent. on the value of the assets taken possession of, collected, realised, or sold is payable. A small fee is also payable in cases where the

Administrator-General grants a certificate; the Administrator has power to reduce the fees to one-half.

Official Trustee.—The office of Official Trustee dates from the year 1843. By Indian Act XVII of that year the Supreme Court had power to appoint the Registrar or other officer of the Court to be a trustee, where there was no trustee willing to act. Act XVII of 1843 was repealed by Act XVII of 1864, which was in its turn repealed by Act II of 1913, which contains the present law on the subject. There are three Official Trustees. The Official Trustee of Bengal has powers in the greater part of India. The powers of the Official Trustee of Bombay extend to the Bombay Presidency and the Province of British Baluchistan; those of the Official Trustee of Madras extend to the Madras Presidency and the Province of Coorg. The Government can appoint Deputy Official Trustees.

An Official Trustee can (a) act as an ordinary trustee, (b) be appointed trustee by a Court of competent jurisdiction. He has, except as otherwise provided the same powers, duties,

and liabilities as ordinary trustees. He may decline any trust. He may not accept any trust under any composition or scheme of arrangement for the benefit of creditors, nor of any estate known or believed by him to be insolvent. He cannot accept a trust for a religious purpose, or for the management or carrying on of any business. He cannot administer the estate of a deceased person unless he be sole executor and sole trustee under the will. He cannot be appointed trustee along with any other person. With his consent he may be appointed trustee in the instrument making the trust, and he may accept a trust contained in a will. When property is subject to a trust, and there is no trustee within the jurisdiction willing or capable to act, the High Court may appoint the Official Trustee as trustee. He may also be appointed a trustee by the surviving or continuing trustees of a trust, and all persons beneficially interested therein.

As in the case of an Administrator-General, the Government of India is responsible for the acts or defaults of an Official Trustee. Fees are payable at rates fixed by the Government.

Freemasonry in India.

In 1728 a dispensation was granted by the Grand Lodge of England to Geo. Pomfrett, Esq., authorizing him to "open a new Lodge in Bengal." Of this personage nothing further is known but under Capt. Farwinter, who in the following year succeeded him as Provincial Grand Master of India, Lodge was established in 1730, which in the Engraved Lists is distinguished by the arms of the East India Company, and is described as "No. 72 at Bengal in the East Indies." The next Provincial Grand Masters were James Dawson and Zech. Gee, who held office in 1740; after whom came the Hon. Roger Drake, appointed 10th April 1755. The last named was Governor of Calcutta at the time of the attack made on the settlement by Surajah Dowlah in 1756. Drake missed the horrors of the Black Hole by escaping and was accused of deserting his post, but, though present at the retaking of Calcutta by Admiral Watson and Clive, it is improbable that he resumed the duties of his masonic office after the calamity that befell the settlement.

The minutes of the Grand Lodge inform us that William Mackett, Provincial Grand Master of Calcutta, was present at the meeting of that body, November 17th, 1760, and we learn on the same authority that at the request of the "Lodges in the East Indies" Mr. Cullin Smith was appointed P. G. M. in 1762. At this period it was the custom in Bengal "to elect the Provincial Grand Master annually by the majority of the votes of the members present, from amongst those who passed through the different offices of the (Prov.) Grand Lodge and who had served as Dep. Prov. Grand Master." This annual election as soon as notified to the Grand Lodge of England was confirmed by the Grand Master without its being thought an infringement of his prerogative. In accordance with this practice, Samuel Middleton was elected (P. G. M. circa) in 1767; but in passing it may be briefly observed that a few years previously a kind of roving commission was granted by Earl Ferrars in 1762-64 to John Bluvitt, Commander of the "Admiral Watson," Indiaman "for East India where no other Provincial Lodge is to be found." Middleton's election was confirmed October 31st, 1768, and, as the dispensation forwarded by the Grand Secretary was looked upon as abrogating the practice of annual elections, he accordingly held the office of D. G. M. Unfortunately the records of the P. G. L. date back only to 1774, and thus much valuable information is lost to us. This Grand Lodge continued working until 1792 when it ceased to meet. It seems that the officers were selected from only two Lodges much to the dissatisfaction of the other Lodges, and resulted in most of the dissatisfied bodies seceding and attaching themselves to the Athol of Ancient Grand Lodge. In 1813 at the Union both the Ancients and Moderns in Calcutta combined and gave their allegiance to the **United Grand Lodge of England** and have since been working peaceably under the Provincial Grand Lodge of Bengal which was revived in that year and in 1840 created a District Grand Lodge.

Madras.—The earliest Lodge in Southern India (No. 222) was established in Madras in 1752. Three others were also established about 1760.

In the same year Capt. Edmund Pascal was appointed P. G. M. for Madras and its Dependencies and in the following year another Lodge was established at Fort St. George. In 1768 the Athol (or Ancients) invaded this District and in 1782 established a Provincial Grand Lodge and both these Provincial Grand Bodies continued working peaceably side by side until the union. Indeed, though not generally known, these two Grand Bodies made an attempt at coalition long before any such movement was made by their parent bodies, the Grand Lodge of England, and the Ancient Grand Lodge, and Malden in his History of Freemasonry in Madras states that in a great measure they succeeded. At the Union in 1813 all the bodies in Madras gave their allegiance to the United Grand Lodge. One event worthy of note was the initiation in 1776 at Trichinopoly of the eldest son of the Nawab of Arcot, Undat-ul-Amari, who in his reply to the congratulations of the Grand Lodge of England stated "he considered the title of English Mason as one of the most honourable that he possessed." This document is now stored in the archives of the United Grand Lodge.

Bombay.—Two Lodges were established in this Presidency during the 17th century, Nos. 234 at Bombay in 1758 and 569 in Surat in 1798, both of which were carried on the lists until the union when they disappeared. A Provincial Grand Master, James Todd, was appointed but there is no record that he exercised his functions and his name drops out of the Freemasons' Calendar in 1799. In 1801 an Athol Warrant was granted (No. 322) to the 78th foot which was engaged in the Maratha War under Sir Arthur Wellesley. In 1818 Lord Moria was asked to constitute a Lodge to be known by the name of St. Andrew by eight Masons residing there and also to grant a dispensation for holding a Provincial Grand Lodge for the purpose of making the Hon. Mountstuart a Mason, he having expressed a wish to that effect. The Petitioners further requested "that his name might be inserted in the body of the warrant, authorising them to instal him after being duly passed and raised a Deputy Grand Master of the Decan. Of the reply to this application no copy has been preserved. Lodge Benevolence was established in Bombay in 1822.

In 1823 a Military Lodge "Orion-in-the-West" was formed in the Bombay Artillery and installed at Poona as No. 15 of the Coast of Coromandel. It seems from Lane's records that in 1830 it was discovered that this Lodge was not on the records of the United Grand Lodge of England. A Warrant was subsequently issued bearing date 19th July 1833. According to the early proceedings of this Lodge, members were examined in the Third Degree and passed to the chair in the Fourth Degree for which a fee of three gold mohurs was charged. In the following year a second Lodge was established at Poona by the Provincial Grand Lodge of Bengal which however left no trace of its existence. In 1825 the civilian element of "Orion" seceded and formed the "Lodge of Hope" also at Poona No. 802.

Here "Orion" unrecognized at home, aided in the secession of some of its members, who

obtained a warrant, on the recommendation of the parent Lodge, from the Grand Lodge of England. Two years later it was discovered that no notification of the existence of "Orion-in-the-West" had reached England, nor had any fees been received, although these including quartermasters had been paid into the Provincial Grand Lodge, Coast of Coromandel. It was further ascertained that in granting a warrant for a Bombay Lodge the Provincial Grand Master of Coromandel had exceeded his powers. Ultimately a new warrant No. 598 was granted as already stated in 1833. Lodge "Perseverance" was started in Bombay No. 818 in 1828. Up to this time the jurisdiction of the Grand Lodge of England in India had not been invaded; but in 1836 Dr. James Burnes was appointed by the Grand Lodge of Scotland, P. G. M. of Western India and its Dependencies. No Provincial Grand Lodge however was formed until 1st January 1838. A second Scottish Province of Eastern India was started which on the retirement of the Marquis of Tweedale was absorbed within the jurisdiction of Dr. Burnes, who in 1846 became Provincial Grand Master for all India (including Aden) but with the proviso, that this appointment was not to act in restraint of any future sub-division of the Presidencies. Burnes may be best described as being in 1836, in ecclesiastical phrase as a Provincial Grand Master "in partibus infidelium" for whatever Lodges then existed throughout the length and breadth of India were strangers to Scottish Masonry. But the times were propitious. There was no English Provincial Grand Lodge in Bombay and the Chevalier Burnes, whom nature had endowed with all the qualities requisite for Masonic Administration, soon got to work and presented such attractions to Scottish Freemasonry that the strange sight was witnessed of English Masons deserting their mother Lodges, to such an extent that these fell into abeyance, in order to give support to Lodges newly constituted under the Grand Lodge of Scotland. In one case indeed, a Lodge "Perseverance" under England went over bodily to Scotland, with its name, jewels, furniture, and belongings, and the charge was accepted by Scotland. This Lodge still exists in Bombay and now bears No. 338 on the Register of Scotland. From this period, therefore, Scottish Masonry flourished, and English Masonry declined until the year 1848 when a Lodge St. George No. 807 on the Rolls of the Grand Lodge of England was again formed at Bombay, and for some years was the solitary representative of English Masonry in the Province. In 1844 Burns established a Lodge "Rising Star" at Bombay for the admission of Indian gentlemen the result of which is seen at the present day. Thus the seed planted at Trichinopoly in 1776 by the initiation of Andat-ul-Amari has borne fruit, resulting in the initiation of thousands of Indian gentlemen of all castes and creeds, and which has gone far to establishing that mutual trust between West and East, a distinguishing characteristic of Speculative Freemasonry. A Provincial Grand Lodge was re-established in Bombay in 1860, and converted into a District Grand Lodge in 1871.

The Grand Lodge of England.—All three Constitutions of the United Kingdom, the United Grand Lodge of England, the Grand Lodge of Ireland and the Grand Lodge of Scotland hold jurisdiction in India. By far the largest is the first; the next largest is the third and the number

of Lodges under Ireland is as yet small. The Grand Lodge of England divides its rule under Five District Grand Masters independent of each other and directly subordinate to the Grand Master of England by whom they are appointed.

Bengal.

- 81 Lodges. Rt. Wor. Bro. Hon'ble Mr. W. J. Reid, C.S.I., I.C.S.; Dy. D. G. M. C. D. Stewart; Assist. D. G. M. Durga Charan Banerjee.

Madras.

- 31 Lodges. A. Y. G. Campbell, C.I.E., O.B.E. V.D., I.C.S.

Bombay.

- 51 Lodges. Rt. W. Bro. W. A. Haig-Brown, J.P., Hon. Mag., District Grand Master.

Punjab.

- 31 Lodges. Rt. W. Bro. Lt.-Genl. Sir George Fletcher McMunn, K.C.B., K.C.S.I., D.S.O., District Grand Master.

Burma.

- 15 Lodges. Rt. W. Bro. James McKenna, C.I.E.; District Grand Master.

The Grand Lodge of Scotland exercises its rule through a Grand Master of all Scottish Freemasonry in India, who is elected by the Brethren subject to confirmation by the Grand Master Mason of Scotland. *Maj.-Gen. W. E. Jennings, C.I.E.*, the present incumbent of the office, controls 69 Lodges. Under him the several districts are in charge of the following Grand Superintendents:

Genl. Sir Claud Jacob, G. Supdt., Northern India	
H. T. Acton	Eastern "
Col. C. E. Luard	Central "
Col. C. H. Richards	Southern "
Lt.-Col. A. W. H. Lee	Burma.

The Grand Secretary is R. W. Bro. Arthur W. S. Wise, J.P., 17, Murzban Road, Fort, Bombay.

The Grand Lodge of Ireland granted a warrant to establish a Lodge at Kurnal in 1837, but it was short lived. An attempt was made in 1869 to establish a Lodge in Bombay, but on the representation of the Grand Secretary of England, to the Deputy Grand Secretary of Ireland that it would be objectionable to create a third masonic jurisdiction in the Province, there being two already, viz., English and Scottish, the Grand Lodge of Ireland declined to grant the warrant. In 1911, however, a warrant was sanctioned for the establishment of Lodge "St. Patrick" and since that year two other Lodges have sprung into being.

The Grand Lodge of Ireland has no District Grand Master in India at present, the Lodges corresponding direct with the Grand Lodge in Dublin. There are ten Lodges, 4 in Calcutta, 3 in Ceylon and 3 in Bombay.

Royal Arch Masonry.—Under England, the District Grand Master in any District is nearly always created also Grand Superintendant, his Deputy as Second and another Companion as Third Principal.

Under Ireland there is no local jurisdiction and under Scotland the office is elective subject to confirmation.

The five English Districts are constituted as under:—

Bengal.

- 27 Chapters. Grand Supdt. Hon. Mr. W. J. Reid, C.S.I.

Madras.

- 15 Chapters. A. Y. G. Campbell, C.I.E., C.B.E., V.D., I.C.S.

Bombay.

- 23 Chapters. W. A. Haig-Brown, J.P., Hon. Mag., Grand Superintendent.

Punjab.

- 18 Chapters. Lt.-Genl. Sir George Fletcher McMunn, K.C.B., K.C.S.I., D.S.O., P.A. G. Soj. (Eng.), Grand Superintendent.

Burma.

- 6 Chapters. James McKenna, C.I.E., Grand Superintendent.

89

The present Grand Superintendent of R. A. Masonry under Scotland is the Hon. Maj.-Gen. W. E. Jennings, C.I.E., and there are 29 Chapters.

There is one Irish Chapter in Calcutta.

Royal Arch Masonry under Scotland has a separate constitution to Craft Freemasonry. The District Grand Chapter of India is at present ruled by M. E. Camp. H. P. Gibbs under whom there are about 30 Chapters in India. The Grand Secretary of all Scottish Freemasonry in India is also District Grand Scribe E. of Scottish R. A. Masonry.

Mark Masonry.—Under England, Mark Masonry is worked under the Grand Mark Lodge of England and Wales, and divided into separate Districts; but in most cases the District Grand Master is also District Grand Mark Master.

Bengal.

- 26 Lodges. D. G. M. Landale Johnstone, I.C.S., D. D. G. M. C. D. Stewart.

Bombay.

- 15 Lodges. Rt. W. Bro. W. A. Haig-Brown, J. P., Hon. Mag., D. Grand Master.

Madras.

- 13 Lodges. A. Y. G. Campbell, C.I.E., C.B.E., V.D., I.C.S.

Punjab.

- 4 Lodges. Rt. W. Bro. Lt.-Genl. Sir George Fletcher McMunn, K.C.B., K.C.S.I., D.S.O., D. Grand Master.

Burma.

- 6 Lodges. Rt. W. Bro. James McKenna, C.I.E., District Grand Master.

The Mark degree is incorporated with the Royal arch degree in Irish Chapters. Mark degree is worked in some S. O. Lodges, but mostly in E. A. Chapters, in which the Excellent R.A.M. and other degrees can be obtained. S. O. Chapters insist upon candidates being Mark Master Masons before exaltation. Mark degree in Craft Lodges is conferred by the Rt. Wor. Master in S. O. Craft does not recognise the ceremony of Rt. W. Mark Master. This is confined strictly to Chapters. Such Chapter has a Lodge of M. M. M. working under its charter. Separate charters for Mark Lodges are only issued by the G. Chapter of Scotland.

Other Degrees.—There are many side degrees worked in India, of the Ancient and Accepted Rite, no degree higher than the 18° is worked in India under England, but under Scotland the 30° is worked. The Knight Templar Degree is also worked in several places under both English and Scottish jurisdiction. There are fourteen 18th Degree Chapters working in India.

Roman Eagle Conclave No. 43, Bombay.

St. Mary's Commandery No. 43, Bombay.

R. A. Mariner, 72, 514 and 662, Bombay.

R. A. Mariner, 61, 81, 82 and 106, Madras.

Secret Monitor, 14, 21, 34, 37, 40 and 42, Madras.

Benevolent Associations.—Each District works its own benevolent arrangements which include the Relief of Distressed Masons, educational provision for the children of Masons and maintenance provision for widows in poor circumstances.

All information will be given to persons entitled by the District Grand Secretary in each District. The names and addresses of District Grand Secretaries are given below:—

D. G. S., Bengal.

C. J. Mackay, 19, Park Street, Calcutta.

D. G. S., Bombay.

J. F. Pennock, V.D., P.A.G.D.C. (Eng.), King's Buildings, Fort, Bombay.

D. G. S., Burma.

J. Meyer, D.G.S., E.C., Rangoon.

D. G. S., Madras.

C. M. Maduranayakam Pillai, Freemasons' Hall, Egmore, Madras.

D. G. S., Punjab.

Owen Roberts, Freemasons' Hall, Lahore.

Scottish Constitution.—For information regarding the Benevolent Funds application should be made to Arthur W. S. Wise, J.P., 17, Murzban Road, Bombay.

The New Capital.

The transfer of the capital of India from Calcutta to Delhi was announced at the Delhi Durbar on December 12, 1911. The reasons for it were stated in despatches between the Government of India and the Secretary of State published at the time. It had long been recognised as necessary, in the interests of the whole of India, to de-provincialise the Government of India, but this ideal was unattainable as long as the Government of India was located in one Province, and in the capital of that Province—the seat of the Bengal Government—for several months in every year. It was also desirable to free the Bengal Government from the close proximity of the Government of India which had been to the constant disadvantage of that Province. To achieve these two objects the removal of the capital from Calcutta was essential: its disadvantages had been recognised as long ago as 1868, when Sir Henry Maine advocated the change. Various places had been discussed as possible capitals, but Delhi was by common consent the best of them all. Its central position and situation as a railway junction, added to its historical associations, told in its favour; and, as Lord Crewe said in his despatch on the subject, “to the races of India, for whom the legends and records of the past are charged with so intense a meaning, this resumption by the Paramount Power of the seat of venerable Empire should at once enforce the continuity and promise the permanency of British sovereign rule over the length and breadth of the country.”

The foundation stones of the new capital were laid by the King Emperor on December 15, 1911, when His Majesty said:—“It is my desire that the planning and designing of the public buildings to be erected will be considered with the greatest deliberation and care so that the new creation may be in every way worthy of this ancient and beautiful city.” Subsequently a **town-planning committee** was appointed—consisting of Captain G. S. C. Swinton, Chairman, and Mr. J. A. Brodie and Sir Edwin Lutyens, members—to advise on the choice of a site for, and the lay-out of, the capital. Mr. V. Lanchester was subsequently consulted by Government on some aspects of the question. The terms of their original engagement (subsequently renewed) were stated by the Under Secretary of State to be:—“The members of the committee will receive their travelling and living expenses, and the following fees for a five months’ engagement:—Captain Swinton, 500 guineas; Mr. Brodie, 1,750 guineas; Sir Edwin Lutyens, 1,500 guineas. The Secretary of State has also undertaken to refund to the Corporation of Liverpool the amount of Mr. Brodie’s salary for the period of the absence.”

Delhi and its environs.—In their first report, dated from Simla, 13th June 1912, the Committee explain that, in dealing with the choice of a site, they felt that the following considerations were paramount and must receive the closest and most continual attention:—(a) Health and sanitation, (b) water-supply and irrigation supply, (c) the provision of ample room for expansion, (d) an extent

of land suitable for the location of buildings of various characters and sizes and for the provision of spacious parks and recreation grounds—to be assumed at 10 square miles for the New City and 15 square miles for the Cantonment—(e) Cost of land and the cost of executing necessary works on different sites, (f) facility for external and internal communication, (g) Civil and Military requirements.

On the east of the Jumna they found no suitable site. To the north of Delhi, on the west of the Jumna, where the Durbar camps were pitched they found some general advantages. The area is, for example, upwind and upstream from the present city of Delhi. The ruins and remains of the Delhi of the past do not cumber the ground. While the external communications might need improvement, the tract is fairly well served by existing railways. Roads and canals and the internal communication could be made convenient without excessive expenditure, and a good deal of money has already been spent on the area. But its disadvantages were found to be overwhelming. The site is too small and much of the land is liable to flooding. Similarly, the western slope of the hills to the south of Delhi, the Naraina plain, was found unsuitable, mainly because it cannot be considered to be Delhi, is destitute of historical associations, and is shut out from all view of Delhi.

Southern site chosen.—The Committee finally selected a site on the eastern slopes of the hills to the south of Delhi, on the fringe of the tract occupied by the Delhis of the past. They describe it as follows:—“Standing a little to the Delhi side of the village of Malcha, just below the hills almost in the centre of the site, and looking towards the Jumna, Shah-jahan’s Delhi on the left fills the space between the ridge and the river. Following down from the present city on the foreshore of the river, Firuz Shah’s Delhi, the site of Indra Prastha, Humayun’s fort, Humayun’s tomb and Nizamuddin’s tomb take the eye in a continuous progress to the rocky eminence on which Ghiyasuddin Tughlak erected his fortress city. On the right the Lal Kot, the Kutb, the Kila Rai Pithora, Siri and Jahanpanah complete the circle of the monuments of ancient Delhis. The mid space in the foreground is filled by Safdar Jang’s Mausoleum and the tombs of the Lodi dynasty, while to the left, towards Delhi, Jey Singh’s gnomons and equatorial dials raise their fantastic shapes.” The land chosen is free from liability to flood, has a natural drainage, and is not manworn. It is not cumbered with monuments and tombs needing reverent treatment, and the site is near the present centre of the town of Delhi.

Healthiness of Site.—In February, 1913, a Committee consisting of Surg. General Sir C. P. Lukis, Mr. H. T. Keeling, C.B.I., A.M.I.C.E., and Major J. C. Robertson, I.M.S., was appointed to consider the comparative healthiness of the northern and southern sites. Their report, dated 4th March, 1913, states that “the Committee, after giving full consideration to the various points discussed in the above note, is bound to advise the Government of India that no doubt can exist as to the superior

healthiness of the southern site, the medical and sanitary advantages of which are overwhelming when compared with those of the northern site."

Report on Northern Site.—In the same month the Town-Planning Committee presented their second report, which dealt with the northern site. This had been elicited by the fact that in December, 1912, Sir Bradford Leslie, an engineer with a distinguished Indian career, had read a paper before the Indian section of the Royal Society of Arts in London, in which he set forth plans for building the new capital on the northern site and producing a fine water effect by a treatment of the river Jumna. This paper aroused considerable attention in England, and its publication synchronised with some letters and articles in the press in India expressing a preference for the northern site. The latter voiced a natural attraction to the north site which the Committee themselves experienced on their first visit to Delhi and enunciated some predilections which the Committee had at one time felt and later abandoned. The Town Planning Committee, therefore, undertook to review once more, and in greater detail, the arguments for and against the northern site. They came to the conclusion that:—"The soil is poor on the northern site as compared with the southern. The southern site is already healthy and has healthy surroundings. The northern site even after expenditure on sanitary requirements will never be satisfactory. If the northern site is to be made healthy, this involves going outside the site itself and making the neighbourhood healthy also. The building land to the south is generally good. On the north to be used at all it has in places to be raised at considerable cost. There is no really suitable healthy site for a cantonment in proximity to a city on the northern site. The exigencies of fitting in the requirements to the limited area of the northern site endanger the success of a lay-out as a whole and tend to make for cramping and bad arrangement. The result of placing a city on the northern site appears to the Committee to be the creation of a bad example in place of a good one."

Final Town-Planning Report.—The final report of the Town-Planning Committee, with a plan of the lay-out, was dated 20th March, 1913. Work was begun in accordance with it and its main lines have been followed throughout the constructional period, but in some important details there have been wide variations from it. The central point of interest in the lay-out, which gives the motif of the whole, is Government House, and the large blocks of Secretariats. This Government centre has been given a position at Raisina hill near the centre of the new city. Advantage is taken of the height of this hill and it is linked with the high ground behind so as to appear a spur of the ridge itself. Behind the hill a raised platform or forum has been raised. This is to be flanked by the large blocks of Secretariat buildings and terminated at its western end by the mass of Government House with its wide flight of steps, portico and dome. The forum is approached by inclined ways with easy gradients on both its north and south

sides. The axis of the main avenue centres on the north-west gate of Indrapat nearly due east of Government House.

Looking from the eastern end of the forum where the broad avenue enters the Governmental centre and where the great stairways are set, the view is towards the east. "Right and left the roadways go and weld into one the empire of to-day with the empires of the past and unite Government with the business and lives of its people."

Behind Government House to the west will be its gardens and parks flanked by the general buildings belonging to the Viceregal estate. Beyond these again, on the ridge itself, will be a spacious amphitheatre to be made out of the quarry from which much of the stone for roads and buildings have been cut. Above this and behind it will lie the reservoir and its tower which will be treated so as to break the sky line of the ridge. To the east of the forum, and below it, will be a spacious forecourt defined by trees and linked on to the great main avenue or parkway which leads to Indrapat.

Across this main axis, and at right angles to it, will run the avenue to the railway station. It was proposed in the Town Planning Committee's Report that this should terminate in the railway station, the post office and business quarters at its northern end, and in the Cathedral at its southern extremity. Considerable changes have been made in these plans. The railway station will be made in the place suggested, but it will not be a terminal station as was originally proposed, but a run-through station. This will adequately serve the new city and will solve the congestion problem of the existing railway equipment of Delhi in a better way than abolishing the present arrangements and providing entirely new ones would do. It will also be a cheaper solution. The new scheme is already being carried out. Its first stages are nearly completed and their principal feature is a diversion of the Agra-Delhi Chord line in order to take it round the new city instead of through it. The Post Office will be situated in the position proposed for it by the Town Planning Committee, but it will not be the Delhi General Post Office, as intended by them, but a sub-office for the service of the new city; the G.P.O. remaining in old Delhi, as at present. The proposal to build a Cathedral at the southern extremity of the avenue has been set aside, as a result of a decision not to create a Delhi diocese.

To the south-east will lie the park area in which stand the ancient monuments of Safdar Jang's Makhbara and the Lodi tombs. This area can be developed gradually as the city expands and has need of public institutions of various kinds. The axis running north-east from the Secretariat buildings to the railway station and towards the Jama Masjid will form the principal business approach to the present city. At the railway station a place will be laid out around which will be grouped the administrative and municipal offices, the banks, the shops and the hotels. On this place the post office is placed in symmetrical relation to the railway station.

The processional route will lead down from the railway station, due south to the point where it is intersected by the main east to west axis. Here round a place will be gathered the buildings of the Ethnological Museum, the Library and the Imperial Record Office. To the south-west of the place station will lie the houses of the local administration and the residences of the European clerks.

It was originally proposed on the recommendation of the Town Planning Committee to place the residence of the Commander-in-Chief to the south of the forum. This site has now been marked for the Kitchener College and the Commander-in-Chief's house will be located on the west side of King George's Avenue in a position close to the south block of the Secretariats. Round about the Viceregal estate and the forum lies the ground destined for the residences of the Secretaries and other officials of the Government of India. To the south-east of Government House lies the club. To the south of the club a low ridge divides the tract into two portions. That to the west is well adapted for a golf-course, while the eastern side is designed for a race-course, the ridge itself offering unusual facilities for locating stands and seeing the races.

Communications.—The avenues range from 76 feet to 150 feet in width with the exception of the main avenue east of the Secretariat buildings where a parkway width of 1,175 feet has been allowed. The principal avenues in addition to the main avenues are those running at right angles to the main east to west axis. Others form part of a system running from the amphitheatre to the railway station and the site of the Kitchener College, and from both the latter to the War Memorial lying on the axis between Indrapat and Government House which is the focal point of the roads and avenues on the parkway.

A lake which can be obtained by river treatment is shown on the Town Planning Committee's plan immediately below Indrapat, beyond the end of the central parkway. The lay-out was made independent of the water effect, but the Committee thought that its ultimate creation would enhance enormously the beauties and general amenities of the new capital; and that it should and would become an integral portion of the design which they submitted. But the lake scheme has been abandoned for sanitary reasons. It was found that it would check the action of the sub-soil drains and thereby raise the sub-soil water table.

The report contained lengthy recommendations concerning water-supply, drainage, sewage system, parks and communications. The main lines of the lay-out as projected by the Committee were accepted by Government and a great deal of work has been done on them. The new central station and the difficulty experienced in meeting the various railway interests concerned will necessitate the postponement of this part of the scheme, and it has been decided that the needs of New Delhi will be met by a diversion of the existing Agra-Delhi Chord Railway to a line drawn eastward of Humayun's Tomb and Purana Killa and the construction of

a new through station near the site of the proposed Central station. Another important modification consists in the reservation of the area lying south of the Delhi and Ajmere Gates of the city for the purpose of the extension of Old Delhi.

Temporary Capital.—For the use of the Government of India during the period of the building of the new capital—a period that will have to be extended owing to the conditions created by the war—an area has been selected along the Alipur Road, between the present civil station of Delhi and the Ridge. The early idea that many of the officials should live under canvas had to be given up, and there are now temporary offices and residences. The architecture and method of construction are similar to those adopted in the exhibition buildings at Allahabad in 1910; but the buildings will outlast the transitional period for which they are intended. They will subsequently be an asset of some value.

Chief Commissioner Appointed.—On October 1, 1912, by proclamation, there was constituted an administrative enclave of Delhi under a Chief Commissioner, Mr. W. M. Hailey, I.C.S. Mr. Hailey afterwards became Finance Member of H. E. the Viceroy's Executive Council and the Chief Commissioner of Delhi is now Mr. E. R. Abbott, C.I.E., I.C.S. The Delhi district of the Punjab, from which this enclave was entirely taken, consisted of three tahsils or subdivisions and the enclave was formed by the central tahsil, that of Delhi, and by such part of the southern tahsil, Ballabgarh, as was comprised within the limits of the police post of Mahrauli. Delhi Province as thus defined had originally an area of 528 square miles to which was added later an area of 45 square miles to the east of the Jumna river and taken from the United Provinces to serve as a grazing ground for the cattle for the city. The total area is, therefore, 573 square miles. On the basis of the Census of 1911, the population of the area originally included in the Province was 3,98,269 and of the new area 14,552, or a total of 4,12,821. The population of the Municipal town of Delhi was 2,29,144.

The Architects' Designs.—At the Royal Academy in 1914 there were exhibited drawings by Sir Edwin Lutyens and Mr. Baker, which though provisional and rather in the nature of what are called Warrant Designs, show how the architectural problems of the new capital are to be solved. Government House and the Secretariat have been planned by them as one block, as it were a Capital, facing towards Indrapat. The Secretariat is being built on the rock of Raisina hill, the top of which has been levelled for the purpose; behind the Secretariat is to be a raised causeway forming the approach to Government House; and Government House itself is being built on a high basement constructed on an outcrop of rock. The main processional route to Government House has been made along a sloping way (at a gradient of one in 22½) which leads from a semi-circular piazza, the "Great Place," to the level of the Secretariat buildings.

At the summit of this sloping way is the "Government Court", a space of about 1,100 feet in length, and 400 feet in breadth flanked to the north and south by the two blocks

of Secretariat buildings. These buildings have been designed by Mr. Baker and the aggregate cost will be some Rs. 1,24,00,000. According to the design the eastern end of each block is marked by deep loggias looking out over the Central Vista. In the centre of each block is a dome. In the case of the north block this marks an Entrance Hall; in the south block it surmounts a Conference Hall with a suite of cloak and reception rooms. Each block contains four floors: on the main ground floor are the general offices of the Departments; on the first floor are the offices of members of Council Secretaries, and other officers; whilst the remaining floors are occupied by clerk rooms and records. An essential feature of the design, and one which sets the character of the whole building, is the provision of loggias and recessed ways or exedrae giving views through to the fountain courts situate in the interior of the blocks, and these take the place of the continuous verandahs that are so familiar a feature in Indian buildings. The Architect relies for control of temperature on these loggias and recesses, on thick external walls, together with the thick window shutters adopted so widely in Southern Europe, and the wide *chajja* characteristic of Oriental buildings.

Between the north and south Secretariat blocks, is the way into the "Viceroy's Court"—the raised causeway already referred to—leading up to Government House. The Court is about 600 feet in breadth and 1,300 feet in length; it will be treated with grass and water ways and low trees: and should form a dignified approach to the final group of buildings. At a point midway in the causeway, at which will be erected a column presented by the Maharajah of Jaipur, roads lead off to the north and south, forming alternative lines of approach to Government House.

One thus reaches the portico of Government House. This portico raised some twenty feet above the level of the Viceroy's Court and thirty-five feet above the surrounding country. The house itself centres round the great Durbar Hall, a domed structure which dominates the scheme of the buildings surrounding it. Grouped round the Durbar Hall are the State Rooms and great stairways from the entrance Courts on the north and south sides. Projecting from this central block are four wings, that on the south-west containing the Viceroy's private apartments. In the south-west wing, accommodation is provided for the A.D.C.'s to the Viceroys. Guests are accommodated in the north-west wing, whilst the north-east wing contains the offices of the Viceroy's Private and Military Secretaries and other members of his establishment. On the western side of the house will be a raised garden, walled and terraced after the manner of the Moghuls, and behind that again, on the level of the surrounding country, a park which will contain the staff houses and quarters. The park will extend to the rocky slopes of the Ridge which close in the vista on the west. The house will, with its attached quarters, garden and park, all of which have been designed by Sir Edwin Lutyens, cost approximately Rs. 1,40,00,000.

Style of Architecture.—There had been a prolonged "battle of the styles" over Delhi and if these designs gave satisfaction to neither of the extreme and opposed schools of thought,

they clearly showed an endeavour to apply, with due regard for Indian sentiment, the spirit and essence of the great traditions of architecture to the solution of structural problems, conditioned upon an Indian climate and Indian surroundings and requirements. To use the language of the architects themselves, it has been their aim "to express, within the limit of the medium and of the powers of its users, the ideal and the fact of British rule in India, of which the New Delhi must ever be the monument."

The inspiration of these designs is manifestly Western, as is that of British rule, but they combine with it distinctive Indian features without doing violence to the principles of structural fitness and artistic unity. Much will depend upon the resourcefulness and ability of the Indian artificers themselves whom the Government of India proposes to bring together in Delhi to give expression, by their decorative work, to the best traditions of skilled Indian craftsmanship.

Cost of the Scheme.—It was at first tentatively estimated that the cost of the new capital would be four million sterling and that sum was given in the original despatch of the Government of India on the subject. Various factors have since then increased the cost, the chief of these being the immense rise in prices since the war, and the Legislative Assembly were informed by Government on 28rd March, 1921, that the revised estimates then amounted to 1,307 lakhs of rupees. This amount includes allowances for building new Legislative Chambers and Hostels for Members of the Indian Legislature, which were not allowed for in the earlier estimates. The New Capital Enquiry Committee, in its report published in January, 1923, estimated the total expenditure at Rs. 1,292 lakhs including Rs. 42 lakhs for loss by Exchange. This figure still stands.

The Project Estimate contains certain items such as land, residences, water supply, electric light and power, and irrigation on which recoveries in the form of rate or taxes will, in addition to meeting current expenditure, partially at any rate cover the interest on the capital outlay whilst there are other items on which some return on account of the sale of leases, general taxes and indirect receipts may be expected.

Progress of the work.—The construction of New Delhi has made satisfactory progress, having regard to the curtailment of the Budget allotment, in consequence of the war and the return of officers and other establishments to their civil work has made possible a considerable speeding up of constructional operations provided money can be provided to pay for them.

Meanwhile the central point of interest in the plan has been given careful detailed consideration by the Government and the architects. The following is approximately the state of progress reached. The centre portion of Government House is approaching completion to upper basement level and the state rooms will shortly be commenced. In the Secretariats two storeys have been completed in all four of the sections into which the buildings are divided and the third storey has nearly been completed in two of

them. The Secretariats have so far advanced that arrangements are being made to transfer to them from Calcutta in October 1924 the offices of the Accountant General, Central Revenues. There reached Ralsina, in 1920, statues of their Majesties in Coronation robes which are to be placed in front of Government House. That of the King, by Mr. Mackenna, is the gift of the Maharaja Scindia of Gwalior. That of the Queen, by Sir George Frampton, is the gift of the Maharaja of Bikaner. The keen interest of the ruling princes in the transfer of the capital, which is very welcome to them, is further shown in the gift by the Maharaja of Jaipur of funds for a Column, designed by Sir Edwin Lutyens, which is to be located midway in the Viceroy's Court. This Column is surmounted by the Star of India, and will be visible from many parts of the New City.

Col. Sir Sydney Crookshank, Secretary to the Government of India, P.W.D., informed the Legislative Assembly at Delhi on 16th March, 1921, that the "Government House work is nearly one-third finished, the Secretariat blocks somewhere about two-fifths and the Residential buildings about three-fifths finished. We have still some 52 Officers' bungalows, 73 European quarters, and 16 Orthodox quarters to construct before we shall have finished the present programme of construction of residential buildings, which in itself is only about four-fifths of the total required. . . . We have constructed "practically all the main roads and now have to carry on the construction of service roads . . . Where we are behindhand is in engineering services, and that is where we ought to make a special effort to push on, in order that we shall have our electric-light and power sewerage and drainage and water supplies on a thoroughly satisfactory basis." The residential buildings have since been completed and the Engineers hope to have the Secretariats and Parliament house ready for occupation in 1925 and Government House in 1926. These dates were confirmed in the autumn of 1922 by a special committee presided over by the Hon. Sir Malcolm Hailey which was appointed to consider ways for reducing the expenditure upon the new city and for hastening its completion.

Opinion of the Legislature.—Considerable discussion regarding the new works took place in the Assembly in 1921. A certain number of members who wished the work to be stopped, either to save the outlay or in order that a new capital might be established in some other locality with a more equable climate throughout the year, received no countenance. Strong feeling against the annual temporary migration of the Government of India to Simla led to the passage of a Resolution urging the speediest possible completion of New Delhi so that it might accommodate Government throughout the year. It runs: "This Assembly recommends to the Governor-General in Council that in the interests of economy and of general convenience alike the execution of the programme of New Delhi works may be expedited and the necessary funds provided or raised so that the Secretariat and Legislative buildings and connected works including residences may be completed as early as practicable." Sir Sydney Crook-

shank informed the House that at the rate of expenditure of one crore per annum, which was approximately the present rate, eight years would be required to finish the work, whereas by spending two crores a year the work would be finished in four years, but that as they had already entered on this year they could not spend fully two crores within it, so that the four-year period really meant between 4 and 5 years. Non-official Members urged Government to devise means for annually providing more funds and the Finance Member undertook to consider whether and how he could do so.

A non-official Member in the Legislative Assembly on 28th September, 1921, at Simla, moved a recommendation to Government "to appoint a Committee to inquire into the possibility of establishing a permanent Capital of India in a place possessing salubrious and temperate climate throughout the year." This proposal was ridiculed by several of his non-official colleagues and was eventually rejected without a division.

The exact expenditure on the New Capital up to 31st March 1922 was about Rs. 6,20,00,000 or approximately half the estimated cost. By 31st March 1923 the expenditure was Rs. 8,02,00,000 and by 31st March 1924 it will be approximately Rs. 9,65,00,000.

Two Cathedral Schemes.—In October 1913 a letter was published in *The Times* from the Bishop of Calcutta on the provision of a Cathedral at Delhi. He appealed for £50,000 in addition to any grant given by the Government, and quoted in his letter the following statement of approval by the King-Emperor: "I heartily approve of the project to build a Cathedral in the new city of Delhi. I trust that the appeal for the necessary funds may meet with a generous response, so that in due time the capital of India may possess a Cathedral which in design and character will testify to the life and energy of the Anglican Church and be worthy of its architectural surroundings both of days gone by and of those to come." His Majesty subscribed £100 and the Queen £50 to the fund. The Indian Church Aid Association received several contributions towards the building fund for the proposed Cathedral Church, in response to the appeal of the Bishop of Calcutta.

The ecclesiastical authorities have since decided not to establish a See of Delhi and in consequence the Cathedral scheme has been set aside. A scheme to build a church worthy of the new city has taken its place and the money collected for the Cathedral is being utilised for it. The amount in hand at the beginning of 1924 is approximately Rs. 70,000 or about a seventh of what is wanted. A further appeal for funds was issued in the new year.

Cheques may be sent to the Secretary, Indian Church Aid Association, Church House, Westminster, S.W. and crossed Lloyds Bank, St. James Street, S.W.

A Roman Catholic Cathedral is also projected and Father Paul Hughes, O.M.C., has been touring India collecting money for the Cathedral Fund.

All-India War Memorial.—H. R. H. the Duke of Connaught on 10th February, 1921, laid the foundation-stone of an All-India War

Memorial at the southern end of the Central Vista. The place chosen is a fine position in the centre of the circular Princes' Park around which the mansions of the Ruling Princes will be built and overlooking the lake on the opposite side of which lies Indrapat.

The Memorial will take the form of a triumphal arch spanning Kingsway, the avenue running down the centre of the Vista. It will generally be similar to the Arc de Triomphe in Paris, but will be simpler in a way which will probably increase its grandeur and dignity. The monument will reach a height of 160 feet and the inner height of the arch will be 87 feet 6 inches and its breadth 70 feet. Over the arch on both fronts will appear in capital letters the single word INDIA and this will be flanked on each side by the initials MCM (i.e., 1900) whilst immediately below them on the left-hand will be the initials XIV (i.e., 14) and on the opposite side the figures XIX (i.e., 19). Lateral arches through the monument will be flanked by fountains.

The architectural features of the Memorial will contain nothing specially pertaining to any religious denomination nor any carving of figures or other ornaments that might offend any creed. The lower part will be constructed of red Bhartpur stone and the upper part of white Dhoulpur stone. The arch will be surmounted by a great cornice and above this will be an attic, or series of enormous steps ascending centrally. Above these will be a circular stone bowl 114 feet in diameter. This is intended to be filled with burning oil on great anniversaries and other occasions so that there will be a shining fire by night and a column of smoke by day.

The end of each pier of the arch resembles in appearance the Cenotaph erected in Whitehall, London, in memory of the British soldiers who fell in the Great War. The memorial is solely Indian in purpose and will bear the names of Indian regiments only. The building of the foundations of the structure have been commenced.

Legislative Council Chamber.—H. R. H. the Duke of Connaught on 12th February, 1921, laid the foundation-stone of a large group of Parliament buildings in New Delhi on a convenient site shortly north-eastward of the Secretariats. The buildings will form an imposing structure circular in shape and centrally surmounted by a large dome.

The outer edge of the building will be formed of a verandah, having along its outer side a complete circle of round stone columns, while opening on to the verandah will be a circle of Secretariat Offices concerned with the Chambers to be housed within. This girdle of verandah and offices will surround a large circular site in which will be four distinct buildings linked with one another and with the offices. Three of them will be practically semi-circular in shape, having their bases upon the inner side of the girdle. They will externally be similar in size and design and will internally be arranged to accommodate respectively the Chamber of Princes, the Council of State, and the Legislative Assembly. The spaces between them will be occupied by gardens, each garden occupying the same amount of ground as one of the buildings.

In the centre of the circle will stand the largest of the inner buildings. It will be circular in shape and will be linked by a cloister with each of the other buildings. It will contain a domed circular central hall 90 feet in diameter. This will be used as a library for the members of the three Chambers and will be of a size and arrangement sufficient and suitable to accommodate a joint session of both Council of State and Legislative Assembly and probably also of the Chamber of Princes with them, if it should ever be desirable to have a joint session of all three.

There was considerable delay in beginning the construction of the building after the Architects' plans had been sanctioned. The foundations were not completed by the autumn of 1922. The Public Works Department hope to get the building sufficiently ready for occupation for the first sitting of the Indian Legislature in January or February of 1926. The whole of the building, including in particular the apartment for the Chamber of Princes, will not be finished till considerably later.

Residences for ruling Princes and Chiefs.—Sites have already been allotted on which thirty-three of the Ruling Princes and Chiefs propose to erect residences for occupation when visiting the New Capital. The States which up to the present hour signified their desire to build are Hyderabad, Baroda, Mysore, Bhopal, Gwalior, Kashmir, Kalat, Travancore, Bahawalpur, Bharatpur, Bikaner, Bundi, Kotah, Cutch, Jodhpur, Patna, Tonk, Alwar, Datta, Dhar, Dhoulpur, Jaisalmer, Kishangarh, Orchha, Partabgarh, Sirohi, Faridkot, Jind, Kapurthala, Nabha, Sialana, Malerkotla and Loharu.

Ethnological Museum.—The first wing has been built of a museum in which Sir Aurel Stein will house some of his Central Asian Antiquities. Work on certain frescoes was started under Sir Aurel's direction in the 1920-21 cold weather and has made considerable progress.

The Agra Delhi Railway Diversion.—This railway which at present runs across the site of the new city is being diverted to a new alignment running East of Humayun's Tomb and Indrapat. The new line will be opened in April or May, 1924. Amongst other matters which are now receiving attention are the construction of the residences of the Commander-in-Chief and the Hon'ble members, afforestation of the Ridge to the west of the new city, the design for the Imperial Record Office, and the naming of the roads.

Sanitary Improvements.—While the work on the new city has been going forward various improvements in the existing Delhi have been carried out and the sanitary conditions in particular have been much improved. The fly nuisance which was extremely bad in Delhi has been much reduced, and other schemes have been formulated as the result of a sanitary survey which embraced the whole of the city. The most tangible results of these efforts is seen in the consistent fall in the death-rate, and the acknowledged reduction in the amount of sickness in Delhi.

Arboriculture.—Nearly forty miles of roads in the new capital have been planted with roadside avenues of trees. The results have varied. Temporary quick growing trees were planted alternately with slow growing permanent trees, the

idea being to remove the former when the latter reach maturity. The distance between the permanent trees varies between 40 and 60 feet, the exact distance depending on the expected final spread of the permanent trees. The aim in selecting the permanent trees has been to get hardy kinds, that naturally produce foliage and contours suitable for the various types of buildings and roads, and at the same time to obtain as many varieties as possible, but without mixing the kinds of any one road. The scientific side of the work was entrusted to an expert from Kew-Gardens. Considerable difficulty has been experienced in carrying out this plan as many trees otherwise suitable have not proved capable of withstanding the hot winds of summer and the cold of winter, while others capable of withstanding these extremes of climate have failed to thrive on the brackish water that was the best that could be supplied for them.

To the Superintendent, Horticultural Operations, has been assigned the arduous duties of laying out and maintaining gardens around the residences in the new city and the afforestation of the eastern slopes of the southern Ridge and several historical gardens round Old Delhi. The areas of the gardens attached to the residences vary from 1½ to 4 acres and in the laying out of these efforts have been made to keep each garden in harmony not only with its house and surroundings but with the adjoining buildings and thoroughfares. A pleasing appearance and shade and shelter from the prevailing winds have been the governing considerations in the lay-out. The effort to keep the formation of the gardens apace with the speed of the building of the houses has necessitated a great deal of temporary work in fast growing vegetation to cover the period required for the maturing of permanent trees, shrubs and plants. The temporary vegetation also acts as a shelter for the slower growing permanent varieties.

Owing to the vast levelling operations over the whole of the new capital sites, the quality of the garden soil greatly varies and the lack of a plentiful supply of water has added difficulties to the task of turning an arid waste into a garden city. The results in completed gardens are, therefore, very varied.

An effort is being made to clothe with trees and shrubs that portion of the rocky ridge which is visible from the new capital. Owing to the difficulty of getting water to the site and to the rocky nature of most of the area the success obtained appears small. It is believed that the scientific and hard work put into the task during the past six years will show up creditably during the next few years. The full results cannot be expected before about 1934.

Higher College for Chiefs.—It was proposed during 1914 that a higher college for Chiefs should be established at Delhi and in this connexion a conference of Chiefs and Political Officers was held at Delhi at which the Viceroy presided. It was subsequently announced that subscriptions offered towards the college amounted to about ten and a half lakhs, various recurring sums were promised, and the Government of India also promised to recommend the Secretary of State, a grant of Rs. 50,000 a year. Thus the whole capital would come to 12½ lakhs. The proposal is still under consideration.

University.—The Government of India in the Spring session of their Legislature in 1922 introduced and carried a Bill for the establishment of a university, teaching and residential university of Delhi, the buildings for which would be erected in the new capital. It is intended to provide a local university on the model recommended for Dacca University by the Calcutta University Commission. Delhi is regarded as a suitable location for such an institution, being the winter capital of the Government of India and already containing three arts colleges and the Lady Hardinge Medical College for Women. The general scheme was also drawn up with regard to probable changes made in connection with the Punjab University and in consultation with the representatives of the local colleges.

Communal representation in connection with the university is provided only to a limited degree and no provision is made for such representation in the academic body. The Government will be the Government of India and the Chancellor the Governor-General. There is some modification of the usual distribution of functions between the Government, the Chancellor and the Vice-Chancellor. The existing colleges retain the name of colleges and the power of appointment of their own staff, but the recognition of the staff of a college as teachers of the university will be given by the university itself. The Faculties initially instituted are those of Arts, Science, Medicine and Commerce.

The provision of funds for the complete realisation of the university must be a matter of time and it was, therefore, decided to commence work with the existing colleges in their present buildings and to permit them gradually to modify their organisation, especially with regard to the separation of intermediate classes in such a manner as to permit of the development of the university in its eventual form. In order that this may be done without undue dislocation in the colleges, the transitory provisions are particularly wide and permit of considerable divergence during the initial years from the form of the university as eventually contemplated.

Dr. H. S. Gour, M. L. A., was in 1922 appointed first Vice-Chancellor of the new university and the initial work of organisation was quickly effected by the Executive Council. Unfortunately the inability of the Government of India to allot considerable funds was a severe handicap. It was hoped that H. E. the Viceroy would be able to lay the foundation-stone of the university buildings in November, 1922, but this proved impracticable, and the site for the new buildings required has not yet been settled. Government and the University Authorities are examining this point in consultation, particularly with reference to question whether to build in the new capital or to utilise buildings that may become available elsewhere. The Executive Council approached the Government of India with a request to assign the University a seat in the Legislative Assembly, as unanimously recommended by the Joint Select Committee of the Legislature on the University Bill to open its state scholarships to the university and to accord to them the privilege of nomination to Government posts.

The Calendars.

A full Calendar will be found at the beginning of this book. Below are given details of the other Calendars in use in India.

The *Jewish* Calendar is in accordance with the system arranged A.D. 358. The Calendar dates from the Creation, which is fixed as 3,760 years and 8 months before the beginning of the Christian Era; the year is Luni-solar.

The *Mohammedan*, or era of the Hejira, dates from the day after Mahomet's flight from Mecca, which occurred on the night of July 15, 622 A.D. The months are Lunar.

The *Fasli* year was derived from a combination of the Hejira and Samvat years by the order of Akbar; it is Luni-solar. The *Bengali* year seems also to have been related at one time to the Hejira, but the fact of its being Solar made it lose 11 days each year.

The *Sameat* era dates from 57 B.C., and is Luni-solar. The months are divided into two fortnights—*sudi*, or bright, and *badi*, or dark. Each fortnight contains 15 tithis, which furnish the dates of the civil days given in our calendars.

KNOWLES' for Pipes.

The last word in Stoneware Pipe Joints.

Cheaper than an ordinary Pipe—Why?

Because—Cost of laying drain is so much less, and can be easily and efficiently done by Native Labour in any part of the World.

AVOIDS LIPPING.
